GAURI SANKAR DEFMALE STOR

PROFESSOR OF MATHEMATICS, SCOTTISH CHURCHES CYLLEGE AND HONORARY FELLOW OF THE CALCUTTA DEVERSITY.

NINTH EDITION.

(Thoroughly Revised and Improved.)

Calcutta:

S. C. AUDDY & CO., BOOKSELLERS AND PUBLIC ERS. 58 & 12, WELLINGTON STREET

PRINTED BY B. K. DASS, AT "THE WELLINGTON PRINTING WORRS,"
10, HAIADHAR EURDHAN LANE, CALCUTTA.

AGENTS IN THE PUNJAB:
RAI SAHIB M. GULAB SINGH & SONS,
LAHORE.

In this book will be found all that is required in Arithmetic of students of our Indian Universities. It will be useful to students who may afterwards have to serve in Mercantile offices. Any one, who intends to learn Arithmetic thoroughly, will find in it a safe and complete guide. It differs from the existing treatises in the greater prominence given to the Unitary Method and Arithmetical Equations. The Unitary Method (called Subhankar's method in this country) is practically more useful than the method of Rule of Three. The solution of a problem by the Unitary method gives a greater insight into it than the method of Rule of Three, the use of which in most cases is merely mechanical. The Arithmetical Equations require only certain axioms which are common to all branches of Mathematics.

The Examples in this book are more numerous and of greater variety in the belief that a sound knowledge of the analytical part of Mathematics requires a sound knowledge of Arithmetic, and this can be effected only by the student being drilled with home exercises of at least four sums of Arithmetic every day from the 8th to the 3rd class. The collection of examples in this book is sufficiently large to obviate the necessity of buying another book of Arithmetic. Typical examples of every variety have been worked out, and no pains have been spared to make them really instructive.

One-third of the more important examples in each set should be worked out in the class and the remaining two-thirds may be given as home exercises. The more difficult examples in each set and the Miscellaneous Examples may advantageously be left for a revisional course. The Oral Examples should not be neglected.

Typographical errors are likely to have crept in this the first edition. I shall, therefore, feel highly obliged if any one using this book would be good enough to point them out either to me or to the publishers.

In conclusion, I have to thank many friends who have assisted me in the verification of the Answers of the examples of this book, and especially Babu Chunilal Sil, late principal Mathematical Teacher of the General Assembly's Institution and author of several mathematical works, who has materially helped me in the preparation of this work and without whose help it would perhaps not have been possible for me to complete it.

38/2, NILMONY MITTER'S STREET, Calcutta: the 15th December, 1897.

PREFACE TO THE SECOND EDITION.

1 AM very grateful to the Heads of Institutions, and the reading public for the very cordial reception given to this book, the first edition of which has been sold off in the very brief space of two months.

I also take this opportunity of acknowledging the help given me by several of my friends in pointing out errors, verifying answers of examples, and making valuable suggestions.

In this edition only slight alterations have been made here and there, and errors corrected. About 200 of the less important miscelkineous examples have been omitted from the latter part to reduce the size of the book.

38/2, NILMONY MITTER'S STREET, GAURI SANKAR DE. 2016 April, 1898.

PREFACE TO THE THIRD EDITION.

In this edition the book has been thoroughly revised and only slight alterations and additions have been made in certain places. Almost all the examples have been worked anew in the course of preparing the Key to this book which has been out about a month agu. I hope that few errors are left in this edition.

I have to tender my thanks to my friends and correspondents who have pointed out errors and communicated suggestions for the improvement of the book. Any communication for the improvement of the book will be thankfully received.

38/2, NILMONY MITTER'S STREKT,
The 29th December, 1898.

GAURI SANKAR DE.

PREFACE TO THE SEVENTH EDITION.

Is this edition the book has been thoroughly revised and several alterations and additions have been made. Many unimportant articles and examples have been omitted to reduce the bulk of the book and at the same time great pains have been taken to ensure accuracy in the examples and the answers.

8/2, NILMONY MITTER'S STREET, GAURI SANKAR DE.

MATRICULATION ARITHMETIC.

CHAPTER I.

Definitions, Names of Numbers, Notation and Numeration.

I. DEFINITIONS AND PRELIMINARY NOTIONS.

 Anything that is capable of increase or diminution is called a magnitude.

2. A magnitude may be whole and undivided, as the length of a stick, a period of time; or it may consist of separate and distinct parts, as a heap of pebbles, a herd of oxen, a pack of dogs.

3. When a magnitude is whole and undivided, we select some well-marked magnitude of that kind which we call it sunft, and by counting this unit a sufficient number of times, we make up the given magnitude be magnitude be made up of distinct objects, we select an object of that kind as our unit, and see how many of these units are to be taken to make up the given magnitude.

4. Hence, a unit, or as it is generally called unity, is the representation of a thing considered in its individual capacity, without regard to the parts of which it may be made up, and it is the Base or Element of all our computations.

Thus, each of the terms, a man, a house, a pound, &c. denotes one individual of its kind, being the same as one man, one house, one pound, &c. respectively; and these are the bases or elements by means of which several men, several houses, several pounds, &c., may be computed.

5. A magnitude represented as made up of one or more of its unit, is called a quantity, and the result of the comparison of the given magnitude with its unit respecting how many times it contains its unit is called a number.

Thus, the length of a stick, a heap of pebbles are magnitudes; ten yards, a hundred pebbles are quantities; ten and a hundred are numbers.

Hence, number signifies one or more units, or denotes one or more distinct objects of the same kind.

Thus, one man, two houses, three pounds, &c. which are represented by the numbers one, two, three, &c. denote one or more individuals of the same kind.

- Numbers thus viewed or considered are termed whole numbers or integers; and the unit is considered as the first or least integer.
- 8. The measure or numerical value of any quantity is the number of times the quantity contains the unit.

Thus, when a foot is used as the unit of length, and we speak of a rod as four feet long, the number four represents the measure of the stick.

- 9. Hence the measure of a quantity represents its relative magnitude, but the measure and the unit together indicate its absolute magnitude.
 - 10. Numbers are either abstract or concrete.

A concrete or applicate number is a number of objects or units of any kind; an abstract number is a number considered separately and without any relation to objects.

Thus, five apples, ten pounds, four men are concrete numbers; five, ten, four are abstract numbers.

 Hence, an abstract number is a number in its literal sense, giving the idea of times or repetitions; but a concrete number is simply a quantity.

 Arithmetic is the Science of numbers. It investigates their properties, and points out methods of calculations by means of them.

II. NAMES OF NUMBERS,

13. The Symbol or Referentation of unit or unity is 1; but instead of other numbers being expressed by assemblages or multitudes of units flaced together, which would soon become embarrassing, other characters or symbols have been invented, by means of which every number however great may be expressed; again, instead of a different symbol being adopted for every different number, which would soon become equally inconvenient, all numbers are expressed by means of the following far symbols, or as thought a usually termed figures, and sometimes digits, which have their names respectively annexed:—

1, 2, 3, 4, 5, 6, 7, 8, 9, 0
one, two, three, four. five, six, seven, eight, nine, zero.
the first nine of which are all defined by their names: thus, one and
one is two; two and one is three; three and one is four; four
and one is five; and so on; and the last which is variously
denominated lever, eigher, or nought, when standing by itself has
no signification, or at most, denotes the absence of number, and is to
be regarded merely as an auxiliary digit, for the purpose hereit
to be explained. These nine digits are called simple numbers, and
antit of the first order. Their names are nefer the arbitrary.

ten, twenty, thirty, forty, ninety.

The names of the nine numbers between ten and twenty, are eleven, twelve, thirteen, fourteen, fifteen,...nineteen,

The names of the nine numbers between twenty and thirty, thirty and forty,, as also the nine numbers that follow ninety are formed by placing in order the names of the first nine numbers after twenty, thirty,, ninety. Thus we get at last ninety-nine.

15. The number which follows ninety-nine is ninety-nine and one, or ten tens, and is called a hundred. It is a single unit of the third order, and by counting by hundreds as we counted by simple units, we have

one-hundred, two-hundred, three-hundred,nine-hundred.

The names of the ninety-nine numbers between one hundred and two hundred, two hundred and three hundred,, as also the ninety-nine numbers that follow nine hundred, are formed by placing in order the names of the first ninety-nine numbers after one hundred, two hundred, nine hundred. Thus we get at last nine hundred and ninety-nine.

16. The number which follows nine hundred and ninety-nine is nine hundred ninety-nine and one or ten hundred, and is called a thousand. It is a single unit of the fourth order. Proceeding as before, we get ten-thousand as forming a single unit of the fifth order, and ten ten-thousands or a hundred thousand as a single unit of the sixth order; but there being no independent names for these units we call a thousand as a second principal unit, and count by units, tens and hundreds of thousands.

The names of the nine hundred and ninety-nine numbers between one thousand and two thousand, two thousand and three thousand as also the nine hundred and ninety-nine numbers that follow hundreds of thousand are formed by placing in order the names of the first nine hundred and ninety-nine numbers after one thousand, two thousand,.....hundreds of thousands,

17. The next number is a thousand thousands, and forms a single unit of the seventh order. It has an independent name and is called a million. Considering a million as a third principal unit. we count by units, tens, bundreds, thousands, ten-thousands, and hundred-thousands of millions.

18. Lastly, we come to a million millions, which is called a billion, and forms a single unit of the thirteenth order. Proceeding in this way, we get a million billions, which is called a trillion. a million-trillions, which is called a quadrillion, and so on.

The periods which follow the above in succession are quintillion, sextillion, sentillion, octillion, &c.

In France and some of the United States of America a thousand millions is called a billion, a thousand billions a trillion, and so on ; hence a billion in England is a trillion in America, &c.

19. From what has been said above, it appears that we practically employ not more than thirteen independent words :-one. two, three, four, five, six, seven, eight, nine, ten, hundred, thousand, million, and that ten units of any order always make one unit of the next higher order.

TIT NOTATION.

- 20. Notation is the method of expressing by certain symbols or characters, any proposed number expressed in words.
- 21. Beginners have already learnt from Art, 13 how to express the numbers from one to nine by one figure ; the following Article will teach them to express numbers from ten to ninety-nine by the use of two figures.
- 22. When a figure is placed on the right of the same or any other figure it has by universal agreement, the effect of increasing the value of the last mentioned figure tenfold, at the same time that it retains its own value.

Thus, beginning with the auxiliary digit 0, we have the following numbers and their representations :-

	ten		twenty-nine		forty-eight
	eleven		thirty	49	fotry-nine
12	twelve	31	thirty-one	50	fifty
13	thirteen		thirty-two	51	fifty-one
14	fourteen	31	thirty-three	52	fifty-two
15	fifteen	3.	thirty-four	53	fifty-three
16	sixteen	31	thirty-five	54	fifty-four
17	seventeen	30	5 thirty-six	50	fifty five
18	eighteen	3	thirty-seven	1 50	fifty-six
19	nineteen	38	thirty-eight		fifty-seven
20	twenty	31	thirty-nine		fifty-eight
21	twenty-one	49	forty		fifty-nine
22	twenty-two	- 4	forty-one		sixty
23	twenty-three	4	2 forty-two		sixty-one
24	twenty-four	4	forty-three	- 62	sixty-two
25	twenty-five	4	4 forty-four		sixty-three
26	twenty-six	4	forty-five		sixty-four
27	twenty-seven		6 forty-six		sixty-five
28	twenty-eight		7 forty-seven	66	sixty-six

NOTATION.

57 sixty-seven 78 seventy-eight 89 eighty-nine-68 sixty-eight 79 seventy-nine go ninety 69 sixty-nine So eighty of ninety-one 70 seventy 81 eighty-one 2 minety-two as ninety-three 71 seventy-one 82 eighty-two 72 seventy-two 83 eighty-three 94 ninety-four 73 seventy-three 84 eighty-four os ninety-five 74 seventy-four 85 eighty-five 96 ninety-six 75 seventy-five 86 eighty-six 97 ninety-seven 76 seventy-six 87 eighty-seven o8 ninety-eight oo ninety-nine 77 seventy-seven 88 eighty-eight which is the largest number that can be expressed by two digits.

23. The use of two, either the same or different figures, will not enable us to go beyond this number, but a repetition of the contrivance in the last Article, will by means of more figures supply the defect.

Thus, supposing the effect of any figure's being placed on the right of symbols formed as above, to be to increase all their values tenfold, we shall have

100 one hundred and one 20 one hundred and two 20 one hundred 20 one h

200 two hundred 201 two hundred and one 202 two hundred and two

so likewise of succeeding numbers ; thus, we have

345 three hundred and forty-five | 750 seven hundred and fifty 586 five hundred and eighty-six | 946 nine hundred and forty-six

and again 999 will be nine hundred and ninety-nine, which is the largest number capable of being expressed by three figures.

Here, the first figure on the right hand is said to occupy the units place, the second, the place of tens, and the third, that of hundreds.

Of the auxiliary digit o, the sole use is in the effect specified in the last two Articles; and all figures to the right of it will therefore be unaffected by it.

24. In estimating numerical magnitudes, we proceed in order from hundreds, to thousands, tens of thousands, and hundreds of thousands, millions, tens of millions, and hundreds of millions; in precisely the same manner as we have done above from units to tens, and from tens to hundreds.

Sb. Agreeably to the principle of Art. 22, it is assumed that "any figure placed on the right of one or more figures, has the effect of increasing every one of them tenfold without altering its own value"; and this enables us to express with facility any number whatever.

Thus, 1000 will represent one thousand.

5493 will represent five thousand, four hundred and ninety-three.

23456 will represent twenty-three thousand, four hundred and fifty-six.

729054 will represent seven hundred twenty-nine thousand and fifty-four.

1803205 will represent one million, eight hundred three thousand, two hundred and five.

sand, two hundred and nve.

32754081 will represent thirty-two million, seven hundred fiftyfour thousand, and eighty-one.

473025004 will represent four hundred seventy-three million, twenty-five thousand and four.

28. If the first three figures beginning from the right-hand be denominated so many mirts, tens of units and hundreds of units, it follows that the next three figures taken in the same way will be thousands, tens of thousands, and bundreds of thousands; is the next three in order will be millions, tens of millions, and bundreds of millions; tens of an one.

Whence, to express in figures any number proposed, we have only to consider in which of these divisions each part of it ought to be found, observing that three figures from the right must be taken to make each division complete, before we proceed to the next. Thus,

Ex. 1. Express by means of figures: Thirty-five thousand eight hundred and nineteen.

igni nunurea ana nineree

Here, eight hundred and nineteen belongs to the first division on the right; and is written 819: also, thirty-five thousand must be found in the second division from the right, and is 35: whence the proposed number will be expressed by 35,819.

Ex. 2. Write down in figures the number: Five willion, twenty-five thousand, six hundred and seven.

In this case, the first division on the right will be 607; the second will be 025, the digit o being affixed to the left of the others without altering their values, to make up the required number of three; and the third is 5: so that the expression required will be 5,025,607.

Ex. 3. Express by figures the following number: Five hundred and seventy million, two hundred six thousand and fifty four.

Here, the first division is 054, the oaltering only the values of the figures in the subsequent divisions; the second division is 206; and the third is 570; whence the number proposed is correctly expressed by 570,206,054.

27. This method of notation can never present any difficulty, provided it be carefully remembered that every division of figures, as we proceed from the right hand towards the left must be completed as far as it is possible; and by a little practice, we shall be enabled to write down any number by beginning at the telf-hand.

Ex. 1. To write down Six hundred and Wirhen million hundred and twenty-seven, we observe that the division of millions will be 613: that of thousands will be ooo, and that of units 527 V so that the number is expressed by 613,000,527.

Ex. 2. To represent Ten thousand million by figures of for the fourth division we have to, and for each of the third, second and first ooo, so that the representation required is 10,000,000,000.

Examples I.

Represent the following numbers in figures :-

1. Forty-three: seventy-nine: sixty-five: eighty-four: fiftyeight: ninety-seven: sixty: eighty-seven.

2. Four hundred and forty-nine : five hundred and ninety-eight : seven hundred and four; four hundred and five; two hundred and thirty-five : nine hundred and fifty-eight : seven hundred and twentyfive : eight hundred and thirty-five.

- 3. Four thousand; seven thousand, eight hundred and four; eighty-nine thousand and sixty-three; fifty-three thousand, two hundred and twenty-three; eight thousand and forty-six; six hundred three thousand, two hundred and forty; five hundred thousand, five hundred and five : nine hundred nine thousand and nine.
- 4. Three hundred forty-one thousand, three hundred and twenty-three, two hundred thousand and seventy-five ; seven hundred seven thousand and seventy : five hundred thousand : eighty thousand and eight; four hundred two thousand and seven hundred.
- Nine million, forty-three thousand, six hundred and two: seven million, eight hundred fifty-nine thousand, six hundred and thirty-two; three million, forty thousand and twenty; one million, four hundred and three thousand : five million, five hundred thousand. six hundred, and seventy-six: eleven million and five: one million, three hundred, seventy-eight thousand, two hundred and sixty-seven; one million, ten thousand and one,
- Forty-five million, three hundred eighty-seven thousand and twenty-five; ninety-two million, five hundred sixty-eight thousand, nine hundred and eighty-five; eleven million, five hundred sixty-five thousand, four hundred and thirty-seven; forty million, forty thousand and five; ninety-six million, ninety-six thousand and ninety-six.
- 7. Three hundred forty-nine million, four thousand and sixtyfive; one hundred million, thirteen thousand and one; nine hundred nine million, nine thousand and ninety-nine; eight hundred forty-two million, two hundred forty-six thousand, four hundred and eightyfour ; three million, four hundred fifty-two thousand, one hundred and sixty-one; four hundred ninety-four million.
- 8. Ninety-nine million, ninety-nine thousand and ninety-nine; one hundred eleven million, six hundred fifty thousand and fifty;

six hundred forty million, sixty-four thousand and six hundred; five hundred million, seven hundred three thousand and two; six hundred nine million, one thousand, two hundred and eight.

9. Two thousand, eight hundred four million, two hundred fly-two thousand and ninety-seen; tweller thousand, thirty-six million, fifty-four thousand and seventy-nine; four thousand million, nine hundred thousand and seventy-nine; hour thousand million, we hundred four million, we hundred six thousand, five hundred and six; forty two hundred and fifty-nine.

10. Four hundred thousand million and ten thousand; eight hundred thirty-six thousand, five hundred and seventy-three million, two hundred forty-four thousand and six; nine hundred thousand, nine hundred million, nine hundred thousand and nine; six hundred

thousand, sixty million, six thousand and six.

11. Nine thousand, four hundred five million, four thousand, five hundred and fifty; four hundred thirteen thousand, seven hundred twenty-three million, nine thousand and four; five thousand and eight hundred eight million, sixty-eight thousand and eighty.

12. Eight billion, two hundred seven thousand and five; three billion, four thousand, seven hundred two million, one hundred sixtyfour thousand, seven hundred and twenty-two; one billion, three hundred thousand and five.

undred thousand and nive.

Ninety-nine billion, ninety million, ninety-nine thousand, nine hundred and nine; one hundred billion, one hundred ninety-six thousand, four hundred million, ten thousand and nine.
 Six hundred fifty-four thousand, three hundred twenty-three

billion, four thousand, twenty-one million, fifty thousand, three hundred and one; forty-seven thousand, five hundred and one; forty-seven thousand, five hundred twenty-six billion, eight hundred seventy thousand, seven hundred forty-four million, one hundred three thousand, two hundred and eighty-four.

15. Nine trillion, four billion, six hundred forty million, three hundred and sixty-five.

ndred and sixty-five.

16. Write in figures the least number of six digits and the greatest number of eight digits. How many numbers are represented by three digits?
17. Write down in figures all the numbers between eighty-

seven and ninety-three, between six hundred and eleven to six hundred and twenty, and between nine hundred and forty-seven to nine hundred and seventy.

 When told to write five million, five hundred five thousand, five hundred and five in figures, one boy wrote 550555, and another

wrote 50550505; what mistakes did they commit?

28. It will be observed, from what has been said, that each of the nine figures or digits, 1, 2, 3, 4, 5, 6, 7, 8, 9, has a simple,

absolute or intrinsic value of its own, whereas the auxiliary distribus on such value; and on this account the former are three significant figures, in contradistinction to the Value; and with the course of these significant digits in addition to its simple value, which is fixed and certain, possesses also a local or accidental value dependent upon the situation in which it is blaced.

Thus, in the expression of the number, Four housand three hundred and stant-from which will be 433, the 1 in the first place on the right hand, retains its simple value; the second figure 2, in its situation denotes two tens or twenty; the third is three hundreds, and the fourth is four thousands; so that the local values of 2, 3 and 4 see, are respectively, not times, a hundred times and a thousand times, as great as their simple values; and it is the circumstance of assigning to each of the significant figures a local as well as a simple value, which confers upon the system, the immense powers it possesses.

189. The characters 1, 2, 3, 4, 5, 6, 7, 8, 9, 0 and the mode of perpesanting numbers by their combinations were first invented by the Hindus. The word Digital (denoting a Fringer) usually applied to these thankers, seems to point out the means originally employed in estimating numerical magnitudes; the number of which is called the estimating numerical magnitudes; the number of the properties of the design of the properties of the properti

IV. NUMERATION.

30. Numeration is the art of reading or estimating the value of a number expressed by figures, and is therefore the reverse of Notation.

31. From the circumstance of every figure possessing a local as well as a dringle value, it follows that the value of each figure must be estimated by the place which it occupies: hence, a figure standing by tisted expresses so many unity; a figure in the second place from the right, denotes so many tens; a figure in the chird place, so many hundreds, and so on: consequently, if we suppose any numerical expression to be divised into purceds, or portions and the control of the contr

Thus. 25 is read twenty-five.

304 is read three hundred and four.

5,287 is read five thousand, two hundred and eighty-

60,539 is read sixty thousand, five hundred and

207,385 is read two hundred seven thousand, three

hundred and eighty-five.

1,739,204 is read one million, seven hundred thirty-nine
thousand, two hundred and four.

35,024,376 is read thirty-five million, twenty-four thousand,

three hundred and seventy-six.

275,008,005 is read two hundred seventy-five million,
eight thousand and five.

32. In each of the above instances, we conceive the expression be separated into periods of three figures each as far as they go, beginning at the right hand. But if the number contains more than nine figures, then instead of supposing that each division consists of the supposition of the succeeding divisions, of so the supposition of the succeeding divisions, of so the supposition of the supposition of the supposition of the succeeding divisions, of so the supposition of the supposi

Thus, 34,507008,093402 is read thirty-four billion, five hundred sixty-seven thousand and eight million, ninety-three thousand four hundred and two.

 The last two Articles will be rendered more clear by the following scheme, called the Numeration Table.

&c. s of billions ions	suoi	saads of million is of millions ions	suo	Sauce	
&c. hundreds of thousands of billion tens of thousands of billions thousands of billions	hundreds of billions tens of billions billions.	bundreds of thousaads of million tens of thousands of millions thousands of millions	bundreds of millions tens of millions millions.	tens of thousands thousands	hundreds tens units
6 5 4	3 2 1	6 5 4	3 2 1	5 5 4	3 2 1

A la reference to what was said in Arc 3. "May be proposed to observe that the method of proceeding offices to making a deplike by the Forester of the proceeding offices to making a deplike by the Forester of the proposed at the proposed of the proposed of the proposed of Arc 3; and after the division of millions, proceed directly to that of allitions, tend of hillions, and hundreds of killions; then to rillions, tend of trillions, and hundreds of killions; and so on: and this method certainly possesses some advantages in point of simplicity; but as numbers of these magnitudes are not of very from the Wolation and Nonemiclature established in England.

Examples II.

Write down in words the following numbers :-

- 1. 17;24;35;46;27;48;59;76;84;95;66;75;89.
- 2. 217; 319; 583; 695; 725; 308; 406; 846; 932; 725.
- 3. 3406; 5260; 4236; 3298; 5678; 2405; 9286.
- 4. 43201; 87054; 34002; 49803; 58030; 76503.
- 5. 903756; 903284; 827109; 319420; 243065; 123456.
- 6. 2714325; 8047328; 4010010; 8004640; 1234007.
- 7. 12870045; 20084216; 79030284; 43002005. 8. 321408653: 408076032: 314150265: 123456780.
- 9. \$71268405 : 3179040601 : 319680209078.
- 10. 1234567654321; 5020040003060; 4302500764009.
- 11. 200900600002; 43287000006321; 64000002646002.
- 12. 319080259417; 236045978213478.
- 13. 1327875430029; 5432176989007.

 Write the largest and the smallest numbers possible with the symbols 5, 4, 9, 2, 7.
 Give the local value of each of the significant digits in the

- following numbers:—
 95;64;575;8297;40276;3205;478296;40302605;50003029;7030000;0786002030.
- 16. Express in words the greatest number of five figures and the least number of seven figures.
- Write down all the numbers that can be formed by the digits 2, 3, 4, taken all together.

V. THE HINDU METHOD OF NUMERATION.

35. The following is the Indian Numeration Table in common use:-

&c. &c. hundreds of crores 국平 tens of crores 꽥셔.F crores (취)	১ tens of lacs শিষ্ক জ lacs লক্ষ	ি thousands সহত্ত ত thousands সহত্ত	ত hundreds শত ত tens দশ ক units এক
2 2 2	# E	ಕ್ಷ ಕ್ಷ	2 2 2
4 5 6	7 5	2 8	3 6 4

The above number is read thus:—Four hundred and fifty-six crores, seventy-five lacs, twenty-eight thousand, three hundred and sixty-four.

The Hindu names of places of figures are as follow:—eka, dasha, shafa, sahara, ajura, laksha (lako), nijuto, koti (crore), arbuda, brinda, kharva, nikharva, sankha, sayara, padma, padmanava, mohapadma, kshuni, okshuhini, dhuli, mohadhuli, aniya, parardha.

Examples III.

Write down in words the following numbers according to the Indian Numeration:—

- 19237; 60081; 49027; 167208; 200753; 830005.
 7090709; 8001025; 3905086; 24050008; 4001745.
- 7090709; 8001025; 3905080; 24050008; 400174
 40217815; 4030024340; 4780230016; 23456000.
- 4. 123456789 : 6450300000 : 760242000.
- 123450789; 0450300000; 700242900.
 4500002430; 8000785000; 4020504008.
- Express in figures :--

sk. Four lacs, fifteen thousand, two hundred and eight; fifty-six lacs, four thousand and twenty-nine; eight hundred forty-three lacs, seventy-four thousand, two hundred and nine; eight lacs and five; seventy-five lacs; thirty lacs, seven hundred and eight.

7. Two crores, fifteen lacs and four; thirty-seven crores, seven lacs, four thousand and twelve; one hundred and forty-five crores, nineteen lacs and seven; five thousand and ninety-nine crores, four lacs, five thousand, six hundred and seven.

8. Eighty crores, thirty lacs, one thousand and percent four thousand two hundred and ninety-five crores, four; the lacs, and eighty-five; seventy-five thousand four hundred and feneracres, four teen lacs, nine thousand and nine.

9. How many lacs are there in twenty millions? How many thousands are in ten lacs? How many millions in forthers?

10. Read according to the Indian numeration the valider four hundred five million, seventy-five thousand, nine hundred and four

 Express a billion in Indian, and a akshuhini in Englis Notation.

12. A boy was told to write nine crores, five lacs, four thousand, seven hundred and fifty-six, and he wrote 905407056. Find out his mistakes.

VI. THE ROMAN SYSTEM OF NOTATION.

36. A different system of Notation was in use among the Romans, long before the introduction of the Arabic Notation into Europe by the Moors in Spain.

In this system the characters chiefly used are I, V, X, L, C, D and M which denote respectively the numbers 1, 5, 10, 50, 100, 500 and 1000 in the Arabic system. Again when a \hbar or of line is placed over a character, it increases its value a thousandfold.

Thus \vec{V} stands for 5000, \vec{C} represents 100000.

The following table gives a full view of the method of expressing numbers in the Roman System:-

		m :	Roman System	tne	moers in
200	CC	15	XV	1	I
300	CCC	16	XVI	2	11
400	CD	17	XVII	3	111
500	D	18	XVIII	4	IV
боо	DC	19	XIX	5	v
700	DCC	20	XX	6	VI
800	DCCC	30	XXX	7	VII
900	CM	40	XL	8	VIII
1000	M	50	L	9	IX
1400	MCD	60	LX	10	X
1900	MCM	70	LXX	11	XI
2000	MM	80	LXXX	12	IIX
1886	MDCCCLXXXVI	90	XC	13	XIII
560844	DLXDCCCXLIV	100	C	1.4	XIV

Examples IV.

Express in Arabic Notation each of the following numbers :--

- 1. VII. XVII. XXI. LIV. XXVIX, XXXIX.
- 2. LXLV, XLVIII, XCV, CCXIV, DXIV, CDXIX.
- 3. MIX, MDCCCIV, MDCL, MDCCLXVI, MC, DCV.
- 4. VDLV, VIDL, CCXCDXL, CCXCDXL, MX, MMDMC.

Express in Roman Notation each of the following numbers :--

- 5. q, 16, 35, 46, 68, 75, 89, 99, 105, 148.
- 6. 32. 28, 49, 69, 78, 95, 215, 327, 433, 549.
- 7. 745, 923, 567, 1234, 1567, 1853, 1918. 8, 1231, 1262, 1862, 1877, 1999, 2001, 1769
- 9. 15497, 20015, 200150, 651002, 1000001, 2003450.

CHAPTER II.

The Four Fundamental Operations.

37. We now proceed to the consideration of the Four Fundamental Operations that can be performed upon numbers, which are those of Addition, Subtraction, Multiplication and Division, each of which will be defined, explained and exemplified in its order.

I. ADDITION.

38. Addition consists in finding a number equal to two or more numbers taken together.

The several numbers given to be added are called summands. and the single number obtained by adding them is called their sum or amount.

In addition the several numbers to be added must be either all abstract numbers or all concrete numbers of the same kind.

39. Addition is of two kinds, simple and compound.

(i) Simple Addition is one in which the numbers to be added together are either all abstract numbers, or all concrete numbers of the same denomination (e. g., all rupees, or all pounds, or all miles, &c.)

(ii) Compound Addition is the method of collecting into one sum several concrete numbers of the same kind, but not expressed in one denomination of that kind.

40. It is usual, in the applications of Arithmetic, to express the

operation of Addition by the sign + invented for the purpose. It is read plus.

the sign + between 4 and 5 denotes the addition of the latter number to the former, and is read four plus five.

The sign = is called the sign of equality. It is read equals or is equal to.

Thus, 4+5=9 expresses the result of the addition of 4 and 5 to be 9, or the equality between the sum of the numbers 4 and 5 and the number q. It is read four plus five equals nine.

41. To effect the operation of Addition, it is merely necessary to know from memory or by practice, the sums of every two single figures. The following Table, called the Addition Table, should be carefully committed to memory by beginners :-

			6 and 7 and 8 and	
			6 r are 7 r are 8 r are 9	
3 4 3	5 36	37 3	8 3 9 3 10 3 11	312
			9 4 10 4··· 11 4 12 0 5 11 5 12 5 13	
676.	86 <u>9</u>	61061	1 612 613 614	615
			2 7 · · · · · 1 3 7 · · · · · 1 4 7 · · · · · 1 5 8 · · · · · 1 6 8 · · · · · 1 6	
			4915916917	

This Table can easily be carried on for numbers larger than to: for instance, since 4 and 1 make 5, 4 and 11 make 10 more than 4 and 1, i.e., make 15. Again, since 8 and 7 make 15, 8 and 17 will make 25, and so on, the result in each case, being 10 more than in the corresponding case in the Table. Also 3 and 46 make 40, 9 and 56 make 65, 8 and 87 make 95, and so on, the results in the several cases being respectively 40, 50, 80, more than the corresponding results in the Table.

Ex. I. Add together 4, 8, 5, 0, 9. We add thus, 4 and 8 make 12, 12 and 5 make 17, 17 and 0 make 17, 17 and 9 make 26, 4+8+5+0+9=26.	or thus,	8 5 0
		26
Ex. 2. Find the sum of 24, 13, 15, 42. 24 and 13 make 37, 37 and 15 make 52, 52 and 42 make 94, 24+13+15+42=94.	or thus,	24 13 15 42
		94

Examples V. (MENTAL ADDITION.)

Write down the sums of :-

- (1) 2 and 4: 2 and 10: 3 and 5: 4 and 7: 5 and 0: 8 and 7.
- (2) o and 10; 8 and 8; 7 and 3; 7 and 6; 9 and 1; 5 and 9.
- (3) 2 and 9: 0 and 7: 4 and 9: 9 and 7: 4 and 11: 9 and 14.
- (4) 7 and 7; 7 and 9; 8 and 10; 9 and 6; 4 and 12; 7 and 13. (5) 8 and 2; 8 and 5; 9 and 14; 8 and 13; 7 and 15; 6 and 14.
- (6) 10 and 6; 10 and 9; 11 and 5; 13 and 6; 14 and 3.
- (7) 4 and 17; 3 and 19; 12 and 12; 13 and 13; 16 and 12.
- (8) 8 and 0; 12 and 13; 12 and 15; 11 and 16: 10 and 10. (9) 15 and 8: 11 and 15: 18 and 12: 16 and 15: 13 and 16.
- (10) 18 and 16; 15 and 15; 14 and 14; 16 and 16; 11 and 17.
- (11) 10 and 11: 10 and 12: 11 and 13: 11 and 18: 12 and 10.
- (12) 17 and 17; 18 and 19; 16 and 18; 19 and 19; 16 and 19.
- 2. (1) Add 6 to 28, to 38, to 48, to 58, to 68, to 78, to 88, &c.
 - (2) Add 8 to 25, to 35, to 45, to 55, to 65, to 75, to 85, &c. (3) Add 15 to 30, to 49, to 59, to 69, to 79, to 89, to 99.
- 3. Add together:-
- (1) 12 and 37; 13 and 25; 14 and 84; 14 and 26; 14 and 76.
- (2) 19 and 75; 17 and 87; 16 and 56; 18 and 75; 18 and 52.
- (3) 26 and 64: 36 and 85: 40 and 24: 30 and 75: 27 and 31.
- (4) 30 and 42; 49 and 90; 26 and 37; 75 and 94; 53 and 84.
- (5) 16 and 85; 17 and 54; 45 and 33; 64 and 89.
- 4. Count aloud by increments of 7 up to 100, starting at 6, at o. at 13, at 15, at 17, at 19, at 21, at 23, at 25, and at 29.
 - 5. Find the sums of :-
 - (1) 1, 3 and 5: 2, 5 and 3: 3, 9 and 7: 8, 4 and 6: 7, 7 and 7.
 - (2) 9, 9 and 2; 7, 3 and 6; 8, 5 and 9; 5, 5 and 9; 7, 5 and 9.
 - (3) 3, 3, 3 and 3; 4, 6, 1 and 9; 8, 0, 9 and 6; 8, 8, 8 and 8.
 - (4) 5, 5, 8 and 4. 9, 8, 7 and 6; 4, 7, 2 and 6; 6, 7, 8 and 9,

 - (5) 4, 0, 3, 5 and 9; 6, 0, 5, 0 and 9; 7, 2, 8, 8 and 5.
 - 6. Find the values of :-
 - (1) 3+4+9+3+3+5; 3+6+8+5+6+4; 6+0+4+7+0+5. (2) 9+5+7+8+3+4;6+9+9+7+7+5;5+8+9+7+5+6+3.
- 7. Ram has 6 books, and his brother 5: how many books have they together?
- 8. A boy has 8 marbles in one pocket, and 5 in another; how
- many marbles has be? 9. Bepin has 4 marbles, Gopal 7 and Bejoy 5; how many have
- they together? 10. In a garden there are 4 mango trees, 6 cocoanut trees, s iack trees and 8 plum trees; how many trees are there in all?

11. Shyam paid 3 pice for a loaf, 4 pice for sugar, and 2 pice for butter. How much did he pay altogether?

12. One boy gained 3 prizes, another 2, and another 5. How many prizes did the three boys gain?

13. Hari has 8 marbles, and Bhuban 7 more than Hari. How many have they both together?

14. One dovecot has 8 pigeons, another has 10, and a third

has 12. How many pigeons have the three dovecots?

15. A boy paid 4 pice for a pencil, 2 pice for a pen-holder,

14 pice for a slate and 7 pice for quills; how many did he nay for

the whole?

16. Ram's age is 4 years, Gopal is 2 years older than Ram;
Shyam's age is the sum of the ages of the other two. Find the sum

Shyam's age is the sum of the ages of the other two. Find the sum of all their ages.

17. In a school there are four classes. In the first class there

are 6 boys; in the second class 7 boys; in the third 2 more than in the first class; in the fourth; more than in the second class. How many boys are there in the school?

18. Ram, Hari, and Gopal went to fish. Ram caught 9 lobs-

ters, Hari caught none, and Gopal caught 12. How many lobsters

did the three boys catch?

19. Ram has a line 6 feet long, Shyam one 10 feet long, and Bhuban one 9 feet long. If the three lines were joined, how long a line would they make?

20. Jogin got a prize of 5 rupees, Upendra got 6 rupees more than Jogin; how many rupees did they get altogether?

21. A farmer has 8 cows, 6 calves, and 5 sheep. How many animals has he altogether?

22. Hari got from his father 9 pice, his two brothers 7 and 8 pice respectively, and his sister 5 pice; how much did the father give in all?

23. A man's age is 38 years; how old will he be after 12 years?
24. From a rope are cut off 15 yards and there are 6 yards

left; what was the length of the rope?

25. After giving away 15 rupees, I have 8 rupees still left;

how many rupees had I in all?

26. What number is that from which if I take first 8, and

then 5, there will remain 24?
27. A man has a son whose age is 10 years; he is older than his son by 26 years; what is his age?

28. I have 25 nuts in my pocket, and my father gives me 15 more; how many have I in all?

29. A rupee contains 64 pice; how many pice are there in two rupees?

30. A woman sold 4 mangoes to A, to B 5 more than to A, to C as many as to A and B, to D 9 more than to B; had C bought as many more mangoes as he did buy, the woman would have sold all her mangoes; how many mangoes had she to sell?

SIMPLE ADDITION.

- 42. The principle usually termed carrying in the Rule given below is "that the tens of any order in a partial sum may be carried as units to the next higher order," for ten units of any order are equivalent to one unit of the next higher order.
- 43. The following is the Rule for the addition of large numbers :--

RULE. Place the numbers under one another is such a manner that units may stand under units, tens under tens, hundreds under hundreds, and so on, and draw a line below all the horizontal rows of figures. Then add up the figures is the first vertical row on the right-hand, find the numbers of draw and state in their sum, and put down digits. Carry as many units as there are dear thus found to the next vertical row and add them up as before, observing the numbers of draw and awirt contained in the sum. Place the number of units under the row added, and carry the number of tents to the next; proceed in the same manner till the last row is added, when put figures of byther denominations. The entire sum thus put down will be the sum of the separate numbers.

Ex. Add together 6254, 893, 48 and 5487.

Arrange the numbers according to the Rule given above, and

proceed to add the columns beginning from the column of units.

G254 The sum of 4, 3, 8 and 7 is 22. Place the 2 units under 803 the row of units, and carry on the 2 tens units to the row of

48 tens.

The sum of 2, 5, 9, 4 and 8 is 28. Place the 8 tens under the row of tens, and carry on the 2 hundreds units to the row of hundreds.

The sum of 2, 2, 8 and 4 is 16. Put down the 6 hundreds under the row of hundreds, and carry on the 1 thousand units to the row of thousands.

The sum of 1, 6 and 5 is 12. Put down the 12 under the row of thousands. Thus the entire sum is 12682.

44. A Proof is a second operation which serves as a test of the correctness of the first.

The Proofs of Addition depend on this principle—The sum of several numbers is not affected by the order in which they are added together; thus 4+8=8+4.

43. To ascertain whether the operation is consecut performed the various expedients might be resoured to—finely that of adding the numbers downwards instead of separated, which because the same set of numbers cannot have two different sums, managing? the same set, sult is second, that of omitting one of the horizontal, flows of figures as a second operation, and afterwards adding it to the result for rest obtained by the Rule: third, that of asting out the miner from the sum of the digits in the amount; if the two results coincide the operation may be granted to be correct. (Casting and the mines is explained in Act. 29)

4. Add together seven hundred and six; twenty-five thousand and eighty-four; nineteen thousand and ninety-nine; seven thousand, four hundred and three; ten thousand; ninety-nine thousand and ninety-nine; and eight hundred and eighteen.

5. Add together five hundred sixty thousand, two hundred and eighteen; ninery thousand and eighty-five; three hundred six thousand, five hundred and sixty-seven; seventeen thousand, eight hundred and nine; seventy-eight thousand and eight; twelve thousand and fifty; six hundred twenty thousand, six hundred and twenty-six; and nine thousand and twelve.

8. Add together seven hundred seven thousand, four hundred and fifty-nine; ninety eight thousand and seventy-four; six thousand, eight hundred and seven; five hundred thousand, three hundred and nine; seven thousand, nine hundred and seventy-eight; and nine hundred and ninety-nine.

- 7. Add together fifty-five millions, seven hundred thousand and five; seven hundred millions, nine hundred-elight thousand, two hundred and five; seventy-six millions, fourteen thousand and fiftynine; eight hundred seventy-seven millions, eight hundred four thoutended and forty-seven; seven millions, eight hundred four thoutended that the seventy-five millions, eight hundred four thousand and innervains.
- 8. Add together three bundred nine millions, four hundred seventeen thousand and eighty-teven; six hundred seventy-thousand and forty-nine; seven thousand ninety-seven millions, eight hundred fourteen thousand, three hundred and for ey seventy-eight millions, five hundred four thousand and forty-nine; six thousand seventy-eight millions, four hundred thirty-nine thousand, six hundred and forty-seven; and seven thousand millions, eight hundred seventy-six thousand, four hundred and the tenty-nine.
- Find the amount of five thousand, six hundred and ninetytwo; four lacs, thirty-five thousand and eleven; eighty-five lacs, four hundred and ninety-nine; forty-three lacs and forty-three; and five hundred and four.
- 10 Find the total of six lacs, six thousand and six; four crores, eventy-five lacs, six hundred and thirty-five; nine hundred and ninety-three crores, settly-five lacs, and seventy-five; sighty-five crores, eighty-five lacs, edity-five thousand and eighty-five; twenty-four hundred sixty-three crores, nineteen lacs, four thousand and ninety-five.
- 11. One apple-tree had 816 apples on it, and another had 638; how many apples were on both trees?
- 12. There are 129 boys, 308 girls, and 60 infants in a school; how many children are there altogether in the school?
- A train contains 63 first-class passengers, 120 second-class and 154 third-class; how many passengers are in the train?
- 14. A man has been working five days. On Monday he earns 25 annas, on Tuesday 34, on Wednesday 16, on Thursday 38, and on Friday 27; how much does he earn in the five days?
- 15. In one book there are 525 pages, in another 144, and in another as many as in the other two; how many pages are there in the three books?
- 16. Figures were used by the Arabs in the year 890 and decimal fractions were invented 574 years later; in what year were they invented;
- 17. Five mango-trees produced as follows: the first 657; the second 231 more than the first; the third 892; the fourth 11 more than all the first three; the fifth as many as all the others. How many mangoes were there on all the trees?

- 18. A gentleman left his property by will, thus : to his wife inte thousand and eighty rupees; to each of his two younger sons, five thousand, eight hundred and ninety-four rupees; the rest of his property in two equals shares between his three daughters, and eldest son; the eldest son's share was fifteen hundred and twenty rupees more than the mother's share; what did the gentleman die worth?
- 19. Europe contains 3807195 square miles, Asia 17805146, Africa 11647428, America 13542400, and Oceania 3347840, what does this make the extent of the land off the surface of the globe?
- 20. The number of Mahomedans in the Burdwan division is 957630, in the Presidency division 4963137, in the Rajshahye division 4883165, in the Dacca division 5531869, and in the Chittagong division 242500; find the total Mahomedan population for Bengal Proper.
- 21. Bought a lot of ground for 675 rupees; erected a house upon the same, at a cost for carpenter's works 2540 rupees, mason's works 637 rupees; painter's works 242 rupees and for grading the lot 293 rupees; what was the cost of the whole?
- 22. A man bought four chests of oranges. In the first chest there were 580 oranges; in the second 215 more than in the first; in the third 197 more than in the first; in the fourth as many as there were in the first and third. How many oranges did he buy?
- 23. A man has two thousand and eighty-one sovereigns, three thousand and sixty-eight rupees, one thousand, one hundred and eleven dollars, and two hundred and sixty-nine half-rupees. How many coins has he altogether?
 - 24. Find the sum of six numbers each equal to 7903856.
 - 25. A man was born in 1764; in what year was he 83 years old?
 28. In a dictionary there are 860 words beginning with the
- 26. In a dictionary there are 859 words beginning with the letter A, 742 with the letter B, 1061 with the letter C, and 1154 with the letter D. How many words begin with the letters A, B, C and D?
- Add together the sum of five numbers each equal to 4597, and the sum of four numbers each equal to 89796.
- 28. January has 31 days, February 28, March 31, April 30, November 30, Duly 31, August 31, September 30, October 31, November 30 and December 31. How many days are there in the whole year?
- 29. From a sum of money I first took away 71407 rupecs, and then 90781 rupees and had still 6,843 rupees left; what was the sum?
- 30. The number of soldiers in an army of six regiments are 895, 976, 884, 937, 949 and 982 respectively; the first, third and fifth regiments are respectively joined by 246, 145, and 102 soldiers. Find the whole number of soldiers in the six regiments.

II. SUBTRACTION.

46. Subtraction is the method by which we find what number is left when a smaller number is taken from a greater.

The greater number is called the minuend, the smaller one the subtrahend, and the number left the remainder.

47. The number left is the difference between the two given

- numbers; it is also the excess of the greater number over the less; it is also the number which must be added to the less number to make it equal to the greater. Hence Subtraction is sometimes called complementary addition.

 48. Like Addition. Justraction is of two kinds, simple and
 - 48. Lake Addition, Subtraction is of two kinds, simple and compound.
 - (i) Simple Subtraction is one in which the numbers are both
 abstract numbers or both concrete numbers of the same kind.
 (ii) Compound Subtraction is the method of finding the differ-
- ence between two concrete numbers of the same kind, but of different denominations of that kind.

 49. The operation of Subtraction, is indicated or expressed by
- 49. The operation of Subtraction, is indicated or expressed by the sign -, which is read minus, with the use of the sign =.

 Thus, the excess of 7 above 3 will be expressed in the form 7 3

=4, which is read seven minus three equals four: where the sign = between 7 and 3 denotes the subtraction of the latter from the former and the sign = between 3 and 4 shows the equality of the excess to 4.

50. To effect the operation of Subtraction, it is necessary to recollect the difference of every two numbers less than 20. The following Table, called the Subtraction Table, should be committed to memory by beginners.

I from	2 from	3 from	4 from	5 from	6 from	7 from	8 from	9 from
I leave o	2 leave o	3 leave o	4 leave 0	5 leave o	6 leave 0	7leave 0	8leave o	9leaveo
2 I	3 I	4 1	5 I	6 I	7 I	S I	9 I	10 1
3 2	1 2	5 2	6, 2	7 2	8 2	9 2	10 2	II 2
4 3	5 3	6 3	7 3	8 3	9 3	10 3	11 3	12 3
5 4	6 4	7 4	8 4	9 4	10 4	11 4	12 4	13 4
6, 5								
7 6								
8 7	9 7	10 7	11 7	12 7	13 7	14 7	15 7	16 7
9 8								
10 9								
11 10	1210	1310	14 10	115 10	1610	17 10	1810	19 10

This Table can easily be extended further; for instance, since 2 from 3 [eave t. 7 from 3.5, i.e. from 3+1.0, leave 1+1.0, or 11, the result being 10 more than in the corresponding case in the Table. Also since 7 from 15 [stev 8, 7 from 45, i.e. from 15+3.0, leave 8+50, or 38, the result leaving 30 more than in the corresponding case in the Table. Also since 9 from 14 leave 5, 9 from 54, i.e. from 14+00

leave 5+40, or 45, and 9 from 99, i.e. from 19+80, leave 10+80 or 90; and 50 on.

Examples VII. (MENTAL SUBTRACTION.)

- (1) Take 2 from 4, from 7, from 11, from 6, from 12, &c.
 - Take 3 from 4, from 3, from 6, from 8, from 13, &c.
 Take 4 from 6, from 9, from 13, from 15, from 19, &c.
 - (4) Take 8 from 12, from 15, from 19, from 21, from 25, &c.
 (5) Take 9 from 15, from 18 from 20, from 24, from 36, &c.
- 2. (1) Subtract 6 from 20, 47, 32, 70, 63, 55, 81, 71 and 99.
 - (2) Subtract 7 from 18, 22, 49, 33, 84, 51, 94, 88 and 38.
 (3) Subtract 5 from 18, 25, 53, 61, 70, 82, 67, 93 and 90.
- 3. How many does
- (1) 0 leave from 15: 5 from 14; 7 from 12; 9 from 71; 8 from 21?
- (2) 7 leave from 44; 8 from 38; 9 from 88; 6 from 94; 5 from 47?
- (1) 13 and 18; 3 and 14; 20 and 25; 30 and 45; 15 and 11.
- 89 and 47; 46 and 12; 34 and 68; 14 and 31; 14 and 95.
 What must be added to 11 to make 15, 7 to make 18, 6 to make 15, 4 to make 11, 9 to make 17, 21 to make 49, 31 to make 44
- and 30 to make 82?

 6. By how much does 13 exceed 7, 17 exceed 8, 19 exceed 8,
- 26 exceed 14, 29 exceed 13, 69 exceed 26, 95 exceed 32, 98 exceed 36, 82 exceed 64, and 89 exceed 72?
 - Count by decrements of 3, 5 and 7, commencing at 100.
 How much is 33 less 7: 84 less 5: 40 less 6: 67 less 5+2;
- 96 less 4+0+4; and 67+16 less 15-4?

 9. Take 5+3 from 11: 7+2 from 17: 12 from 14+11: 25 from
- 48+11; 9+6 from 12+5; 3+8 from 2+9; and 1+4 from 2+7.
- How many times can 5 be taken from 15; 6 from 18; 9 from 27; and 12 from 48?
- 11. A girl has 8 oranges. She gives 3 to her sister. How many has she left?
- 12. Shyam has 6 pice. He pays 1 pice for a top, 2 pice for a whistle, and 2 pice for a kite. How many has he over?
- 13. A boy has 18 pice in his pocket. He loses 7 and spends 4.
 How many pice has he left?
 14. If you buy 18 yards of ribbon, and find that you have 3
- yards too much, how many yards should you have bought?
- 15. A man planted 25 trees; 8 of them died. How many lived? 16. Jadu has 19 apples, and Bhuban has 8. How many has ladu more than Bhuban?

17. I bought 6 pice worth of apples, and 4 pice worth of pears. What money had I over out of 15 pice?

18. A baker's boy sets out with 21 rolls. He leaves 5 in one house, 4 in another, 6 in a third and 5 in a fourth. How many rolls has he left?

19. Ram is 19 years old; Gopal is 8 years old. How many years is Gopal younger than Ram?

20. A man had 26 sheep; he sold 10, and 6 were stolen. How many were left?

SIMPLE SUBTRACTION.

51. The following are the Rules for the subtraction of large numbers.

(i) When none of the figures of the Subtrahend exceeds the corresponding figures of the Minuend.

RULE. Place the less number under the greater, so that units may stand under units, tens under tens, hundreds under hundreds, and so on; then draw a line below the lower number. Begin at the unit's place and subtract each figure in the lower line from the correnation of the correlation of the corr

Ex. 1. Subtract 425 from 1679.

Place the smaller number 425 under the greater
1679, and draw a line below it. First take 5 from 9,
and place the difference 4 under the units' figure below the line drawn; next take 2 from 7 and set down

the remainder 5 in the tens' place below the line; next take 4 from 6 and put down the difference 2 in the hundreds' place under the line. Lastly bring down 1 since there is nothing below it. Thus the remainder is 1254.

Ex. 2. Subtract 5634 from 9657.

As before, put 5634 below 9657, and draw a line.

Take 4 from 7, the remainder is 3; 3 from 5 leaves 2
as remainder; lastly 5 from 9 leaves 4 as remainder; lastly 5 from 9 leaves 4 as remainder.

Thus the entire remainder is 4023.

 (ii) If the units of any order in the Subtrahend exceed those of the Minuend.

In this case we avail ourselves of the following principle, usually termed borrowing:—"The Minuend and Subtrahend may be increased by the same number without altering their difference.

Hence we may increase the number of units in any order of the Minneuad by 10, if we increase that of the next higher order in the Subbrahend by 1.

RILLE. Place the numbers as in () and draw a line below. Begin at the mist figure, but it the said figure in the lower line exceed that in the upper, increase the upper figure by than and then subtract the lower figure from the upper figure. Thus increased. Put down the remainder as in (i), and Garry 1 to the next higher figure in the lower line. Proceed with the remaining figures as in (i), observing that whenever ten units have been borrowed, or added to the upper line, monumin units have been with the next figure of the upper line, monumin units have been borrowed, or added to the upper line, monumin units have been when added to the next

higher denomination in the lower line.

Ex. Subtract 563, from 7,85.

Since 4 is greater than 3, 3 is made 13 by adding 7,483 ro to it, from 13 take 4, and put down the remainder to 503.

Now add 1 to the next lower figure 3; the sum is 4, which subtracted from 8 leaves 4. Put down 4.

1810 Next 6 is greater than 4; so 10 is added to 4, and

from the sum 14, subtract 6. The remainder is 8. Lastly, add 1 to the next lower figure 5; the sum is 6, which subtracted from 7 leaves the remainder 1. Thus the difference is 1849.

SET 52. In the preceding Example, the same result would be obtained, if we have borrowed ten units of the next denomination from the Minutent, as is usual in France. For whether we suppose I to be added to the lotter line, or subtracted from the upper, the remainder will evidently be the same on both suppositions, In practice, however, the former method is convenient.

53. Subtraction being the reverse of Addition, it follows, that if we add together the remainder and the less of the numbers proped, the sum ought to be equal to the greater; and the operation of subtraction may be presumed to be correct when this is the case. Another method of testing the correctness of the result is this: Cast. Another method of testing the correctness of the result is this: Cast with the interference of the digits in the minerand, and also from the sum of the digits in the subtrackend and the remainder; if the two results confided, the operation may be presumed to be correct.

- 2. Find the difference between :-
- (1) 75011 and 6012; 3095 and 80131; 8019 and 18018.
 - (2) 110111 and 11012; 916553 and 1683452; 251483 and 77777.
 - (3) 20470932 and 80476325; 613020303 and 420536075.
- (4) 12785462 and 1842567; 92603745298 and 25402987609.
- 3. Find the values of :-

/+81

- (1) 5124060-5083959; 1056789-967899; 4060124-3951035.
- (2) 6284503 4995629; 7014062 6985172; 6001004 5480018. (3) 1010102 - 056784; 3601020 - 3508642; 5490306 - 4301218.
- (3) 1010102 956784; 3601020 ~ 3598642; 5490206 4301218
 (4) 500120456 409206845; 4060213607 2846545789.
- 4) 500120450 499290645 ; 400021309/ 2040545/09
- 4. What is the excess of 12795 above 8096? How much greater is 2600509050 than 433418175?

 5. By how much is 87719808 greater than 68440260?
 - b. By now much is 87719008 greater than 08440200
 - What is the excess of 9497605 above 8688516?

9032401, 7612345, 5040289, 904507 and 9003465.

- 7. By how much is a lac greater than ninety-five thousand, nine hundred and nine, and less than a million?
- nine hundred and nine, and less than a million?

 8. What number must be added to each of the following numbers to make the sum equal to ten millions?—8423458, 457685,
- What number must be taken from each of the numbers 999999, 425078, 8725900, 6420587 and 428905 to leave 245678?
- 10. Required the excess of three hundred five million, two hundred and four, above seventy-five thousand, three hundred and eighty-six.
- From seven hundred eighteen million, fourteen thousand and fifty-six take ninety-eight million, seven hundred three thousand, six hundred and seventeen.

12. Subtract thirteen lacs, four thousand and fifty-six from seventy-five crores, two hundred and three.

 Take eleven thousand eleven hundred and eleven from twelve thousand one hundred and twelve.

14. A box contains 4074 oranges; 2386 of them were sold. How many remained?

15. In 1882 a man was 86 years old. In what year was he born i

16. William the Conqueror began to reign in the year 1060; how many years elapsed between that period and the battle of Waterloo; which was fought in 1815?

17. A tea merchant has 4680 maunds of tea. He sells 1000 maunds to one customer, 999 to a second, and 354 to a third. How many maunds of tea has he left?

18. Jadu has \$29 marbles; he gives away 618 and then buys 206. How many has he now?

19. A man was born in 1845; what was his age in 1896?

A man was 25 years old at the birth of his son; what is the son's age when the father is 74 years old?
 A merchant bought a certain quantity of goods for 6246

rupees and sold them for 7137 rupees. How much did he gain?

One mountain is 15732 feet high, another is 3571 feet high.
 How much is the one higher than the other?
 A railway receives in a year 268,000 rupees. Of this sum

1786064 rupees are for goods and the rest for passengers. How much was received for passengers?

24. Of 17254120 Hindu population for Bengal Proper, 8624022

are males and the rest females; find their number.

25. Queen Victoria was born in 1819. How old was she in 1895?

28. Three boys A, B and C at marbles won together 105; if the numbers that B and C won be added together they will make \$2,

and of this number B won 47. What did each boy win at play?

27. A gentleman gave 12462 rupees for a house and some land; the house alone was worth 9375 rupees; what was the value of

the land?

28. The auswer to a subtraction sum is 1026 and the top line
437. What is the second line?

29. A man has 826 sowereigns in one box and 682 in another; be takes 176 from the former and puts them in the latter. How many are in each box now?

30. When will the Prince of Wales, who was born in the year 1878, be as old as the Queen was in the year 1878, who was born in the year 1819? How old will the Queen then be?

- 54. A number preceded by the sign + (pius), is called a positive number, and a number preceded by the sign - (minus) is called a negative number. When no sign is affixed to a number, it is considered as positive.
- 55. An expression is one in which two or more numbers are connected by the sign + or -; and the numbers thus connected are called its farms.

Thus, 4-3+2+1 is an expression; 4, 3, 2 and 1 are terms; 4, 2 and 1 are positive; and 3 is negative.

56. If an addition and a subtraction, or vice versd, have to be performed in succession, we may invert their order, provided the resulting expression be possible.

Thus, since 9+5-3=11 and 9-3+5=11; .. 9+5-3=9-3+5.

57. Hence it is easily shewn that additions and subtractions may be performed in any order; and that the value of an expression made up of additions and subtractions may be obtained by taking the difference of the sums of all the positive and the negative numbers-separately.

Ex. Find the value of 365 - 101 + 2 + 18 - 267.

Here, 365+2+18=385; 101+267=368; also 385-368=17.

Therefore the value required = 17.

58. The complement of a number is its defect from 10 units of the number's highest order.

Thus, the complement of 6 is 4 and of 659 is 341, for 10-6=4, and 1000-659=341.

Examples IX.

Find the value of each of the following expressions :-

- 1. 16-4+12-25+7-2. 2. 751-9+1786-235-12-672.
- 3. 18+6-31+537-628-19+209. 4. 467-84+49-36.
- 5. 1246-362-371+495+156-386+256.
- 6. 3210-67+59+401-342+491-382+459-87.
- What number must be added to the sum of 750 and 3287 to make the result equal to the sum of 505, 650, 19 and 9003?
- 8. What is the difference between 23047 + 175 368 + 495 132 and 10000 8406 704 + 7305?
- From the difference between 3285 and 456 subtract thedifference between 19011 and 17455.

- 10. A basket contained oranges, nuts and mangoes, in all 1769; there were 1696 oranges and nuts, and 1262 nuts and mangoes. How many more nuts were there than oranges?
- 11. Gopal goes up 16 steps of a ladder, which has 45 steps, then down 7 steps, then up 10, then down 2, then down 4, then up 11, then down 9, then up 7, then up 5, then down 8; what step from the top and bottom will he then be standing upon?
 - Write down the complements of 4; 7; 43; 86; 574; 408.

TIT. MITTEPTICATION.

- 59. Multiplication is the method by which we find the sum of a given number repeated as many times as there are units in another given number.
- 60. The number to be repeated is called the multiplicand, the other the multiplier, and the sum found the product. The multiplicand and the multiplier are both called factors or makers of the product.
- 61. From the mode in which results are obtained in multiplication, it is manifest that Multiplication is merely a compendions method of performing the addition of two or more equal numbers.

Thus, to multiply 7 by 4 being the sum arising from the number 7 repeated four times, we may determine the product as 7+7+7+7 or 28 Here 7 is the multiplicand, 4 the multiplier, and 28 the product; also 7 and 4 are factors of 28.

62. Multiplication is either simple or compound.

- (i) When the multiplicand is either an abstract number, or a concrete number of one denomination, it is called Simple Multiplication.
- (i) When the multiplicand is a concrete number of more than one denomination, but all of the same kind, it is called Compound Multiplication.
- 63. The operation of Multiplication is expressed by the sign x, which is read into or times or multiplied by. Sometimes a dot is used instead of a x.

Thus, 5×7 denotes the product of 5 and 7, and is read 5 into 7, or 5 times 7, or 5 multiplied by 7. Also $5.7 = 5 \times 7$. This must not be confounded with a dot placed near the top, as 5.7. (Art. 332.)

64. The operation intended by the word Multiplication, is defined in Art. 59; and in the first place we will shew that the conclusions which it leads to, may be safely depended upon, as far as the order of the factors may influence the broduct.

By reasoning of this kind, it is made to appear that the product has a similar or symmetrical relation to both its factors, because it remains the same if we interchange the Multiplicand and the Multiplier.

65. A number multiplied by o is o, as also o multiplied by a number is o; for a number taken no number of times is nothing, also nothing taken any number of times is nothing.

Thus, $5 \times 0 = 0$, as also $0 \times 5 = 0$.

68. The following Tables, which are termed the Mnithpliton Tables, present at one view the product arising from the multiplication of any two numbers not exceeding 2c; and though the products of the nine digital from the basis of those of all numbers whatever, it is here extended for the sake of practical convenience, and should be carefully committed to memory.

Table 1.

	1	2	3	4	5	6	7	8	9	10

ation. 33

67. In Multiplication, one of the factors namely, the multiplier must necessarily be an abstract number.

Thus, if the factors are 7 rupees and 8 ruphies, we could easily multiply together the abstract numbers 7 and 6 w jhops product 55 5 but the denomination of this result as the product of the factor of the second as the product of the factor of the factor

It is also absurd to speak of 7 multiplied by 8 rupees, but not of 7 times 8 rupees. Of the two factors that make 56 rupees, one must be abstract, the other concrete, but it does not matter which, for 7 times 8 rupees=8 times 7 rupees. In no case do we multiply by rupees.

In certain cases, however, as will be seen hereafter, the meaning of multiplication may be so extended as to include some concrete multipliers. (Art. 378.)

Examples X. (Mental Multiplication.)

How much is

(1) 7 times 6; 11 times 8; 9 times 7; 11 times 11; 8 times 9; 7 times 15; (2) 10 times 3; 9 times 12; 7 times 7; 12 times 14; 4 times 18; 6 times 8; 3; 8 times 11; 5 times 12; 11 times 12; 5 times 17; 6 times 19;

2. What is the product of-

- (1) 13 by 12; 8 by 9; 15 by 14; 18 by 17; 0 by 4; 12 by 4; 11 by 15? (2) 15 by 19; 17 by 12; 6 by 0; 0 by 11; 20 by 15; 16 by 18; 14 by 18?
- 8. How many are 16×19; 13×15; 19×19; 12×12; 17×19; 20×13; 13×14; 14×18; 17×15; 15×20?
- 4. One bookhas 12 pages. How many pages will 8 such books have?
 5. There are 11 boys in a class; each works 8 sums in an hour.
 How many sums do they all work together?
 - If one knife costs 14 pice, how many pice will 9 knives cost?
 If there are 9 desks in a room, and 6 boys at each desk, how
- many boys will there be in the room?

 8. What will o stools cost at g rupees each?
 - 9. How many trees are in 18 rows, each row having 9 trees?

 10. If I give 5 boys 8 marbles each, how many will be left out.
- If I give 5 boys 8 marbles each, how many will be left out of 81, and out of 100?
 A boy wrote 12 lines of dictation and there were 9 words in a
- 11. A boy wrote 12 lines of dictation and there were 9 words in a line; how many words did he write altogether?
- 12. How many more are 9 tens than 4 twenties? 10 tens than 6 tens? 9 nines than 5 nines?
- 13. In one foot there are 12 inches; how many inches are there in 6, 8, 9, 11 feet?

14. There are 7 days in a week; how many days are there in 8, 11, 12 weeks?

15. A boy walks 3 miles in an hour. How many miles will he walk in 6 hours?

16. How many legs have 14 horses? How many feet have 9 ducks?
17. Ram is 8 years of age; his father is 4 times as old. How old is his father?

18. A man walked 4 miles in one hour. How many miles would be walk at the same rate in 16 hours?

19. Multiply 8 by 4 and take away to ; how much remains?

20. A window has 9 rows of panes, and 12 panes in each row. How many panes are there in the window?

SIMPLE MULTIPLICATION.

 When the Multiplier does not exceed 20, the multiplication is called Short Multiplication.

69. When the Multiplicand is a large number and the Multiplier a number of one figure, we have the following Rule:—

RULE. Write down the multiplier under the units' figure of the multiplicand, and draw a line underneath. Hegin at the units' figure of the multiplicand, and multiplie each figure in succession by the multiplier, setting down and carrying precisely as in Addition.

Ex. Multiply 3468 by 7.

Here 7 times 8 is 56. Set down 6 in the units' place and 6 carry 7; 17 times 6 is 49, and 42 + 5-ag 7; set down 7 in the tens' place and carry 4; 7 times 4 is 26, and 4 carried is 32 at 26 put down 8 in the hundreds' place and carry 3; lastly 7 times 3 is 21, and 2: +3 = 24; set down 24. The product is therefore 24276.

70. Writing down the *local* values of the figures, the process will stand thus:-

3468=3 thousands+4 hundreds+6 tens+8 units :

 $3468 \times 7 = 7 \times 3$ thousands $+7 \times 4$ hundreds $+7 \times 6$ tens $+7 \times 8$ units,

=2t thousands +28 hundreds + 42 tens +56 units, =21 thousands +28 hundreds +47 tens + 6 units,

= 21 thousands + 28 hundreds + 47 tens + 6 units, = 21 thousands + 32 hundreds + 7 tens + 6 units, = 24 thousands + 2 hundreds + 7 tens + 6 units,

71. When the multiplier is greater than 9 but does not exceed 20, the multiplication can be effected easily in one line, by the help of the Rule in Art. 69.

Ex. 1. Multiply 59867 by 15.

=24.276.

SIMPLE MULTIPLICATION.

15 10; then 15 times 8 is 120, and 120+10=130; put down 0 and carry 13; then 15×9=135 and 135+13=148; set down 8 and carry 14; lastly, 15×5=75 and 75+14=89; set down 89. Thus the product is 898005.

Ex. 2. Multiply 350974 by 18.

Here, 18 x4=72; put down 2 and curry 7; then 18 x7= 550974 fan 1647-913; put down 3 and curry 13; then 18 x9=15a, and 163+13=175; set down 5 and curry 17; 18 then 18x0-0 and 0-14-91; pixef 7 and curry 1; then 5017533 18x5=90, and 00+1-92; put down 1 and curry 9; lastly product 16 x1-754, and 54+9-63; put down 82. Thus the product 16 x1-754, and 54+9-63; put down 82. Thus the

72. When the multiplier is a simple number followed by one or more ciphers, we have the following Rule:—

RULE. Multiply the multiplicand by the simple number and to the right of the product place as many ciphers as there are ciphers to the right of the multiplier.

Ex. Multiply 5867 by 70; and by 18000.

5867 (1) Here 5867 × 70 = 5867 × 7 tens, -41060 = 410690.

5867 (2) Here 5867 × 18000 = 5867 × 18 thousands,

105606000

Examples XI.

1. Multiply 284 by 2; 1475 by 3; 2867 by 4; 9048 by 2; 6057 by 4; 80965 by 5; 49508 by 8; 33069 by 7; 91537 by 12.

= 105606000.

2. Multiply

(I) 5849 separately by 2, 3, 4, 5, 6, 7, 8, 9 and II.

(2) 38476 separately by 3, 5, 7, 9, 11, 13, 14, 15 and 19.
(3) 3870492 separately by 2, 5, 3, 7, 4, 9, 6, 8, 11, 12 and 15.

(4) 6508794 separately by 8, 7, 9, 11, 13, 15, 17 and 19. (5) 987654321 separately by 2, 3, 4, 5, 6, 7, 8, 9, 11 and 12.

3. Find the values of

(1) 48508 x 8; 69360 x 6; 49216 x 11; 69432 x 12. (2) 38476 x 9; 876549 x 12; 378125 x 16; 456932 x 18.

(2) 38476 x 9; 876549 x 12; 378125 x 16; 456932 x 18.
(3) 43275 x 17; 46059 x 16; 30748 x 19; 600954 x 20.

(4) 4609758 × 14; 4609758 × 19; 56380477 × 18. 4. Multiply

(1) 980989 separately by 10, 100, 1000 and 10000. (2) 72051 separately by 30, 40, 70, 90 and 100.

- (3) 91357 separately by 20, 200, 300, 5000 and 9000.
- (4) 790785 separately by 120, 1500, 17000, 1300 and 190000.
- (5) 900958 separately by 800, 1600, 14000 and 180000.
 - 5. By how much does 18 times 1118 exceed 17 times 1070 ?

 - Find the sum of 10 times 2304 and 15 times 2045
- Multiply 123456789 separately by 1, 2, 3, 4, 5, 6, 7 & and 9, and add the several products together. 5 worth
- 8. And estate contains 45068 bighas. Each bigh 18 rupees. What is the value of the whole estate?
- 9. A railway train consists of 17 trucks. Each truck carries 12644 maunds weight. How many maunds does the whole train carry?
- 10. A man bought 305 cows at 12 rupees a head, and having
- spent on them for food 95 rupees, sold them at 16 rupees ... head; what did he gain by his bargain?
 - 11. Ram bought of Judu 15 books at 13 annas each, and Judu bought of Ram 19 books at 19 annas each; how many annas had Tudu to give to Ram?
 - 13. Two persons start from the same place, and travel (i) in the same direction, (ii) in opposite directions. One travels at the rate of 93 miles a day and the other at 79 miles a day. How ar will they be apart at the end of 7 days?
 - 73. When the multiplier is greater than 20, the multiplication is called Long Multiplication.
 - 74. When the multiplicand and multiplier are both large numbers, we have then the following general Rule :--
 - RULE. Place the multiplier under the multiplicand, so that units of the same order may be under one another and draw a line under the whole. Begin at the units' figure of the multiplier, and multiply by each of its figures in order, writing down each partial product so that its first figure shall be under the figure of the multiplier that produces it. Add together these partial products and the sum is the product required.
 - Ex. Multiply 7823 by 645.
 - Here, first multiply 7823 by 5 and set down the product 7823 30115. Then multiply 7823 by 4, and put down the product 645 31292, so that 2 may come under the tens' place of the first 30115 partial product, 9 in the hundreds' place and so on. Lastly,
 - multiply 7823 by 6 and set down the product 46938 so that 31202 8 may be in the hundreds' place of the first partial product, 46938 and so on. Add up the three lines of figures already 5045835
 - obtained and their sum 5045835 is the required product The reasoning above employed can be rendered more clear
 - by the following consideration. Since the above product is the sum of 7823 repeated 645 times

and 045 300+40+5; therefore by the use of Arts. 69 and 72 we have the following process:-

7823	645=600+40+5
645	
39115	7823×5= 3911
312920	7823×40= 31202
4693800	7823 × 600 = 469380
FOAFRaF	504582

16. If one or more of the figures of the multiplier be 0, it is evident that the corresponding partial product will be 0 (Art. 65) and the lines may be entirely omitted after placing down each 0 once, to give the proper value to the product arising from the next figure.

Ex. Multiply 4968 by 709.

4968
Here, in multiplying by 790, we first multiply by 9 and ut down the result; then when we multiply by 7, we really multiply by 700, but not by 70, and so place the first 3252312
gure of the first, affixing one cipher in the the hundreds' square of the first, affixing one cipher in the characteristics.

77. If the multiplicand, or multiplier or both, end in ciphers, the ordinary process of Multiplication may be shortened or facilitated

by the following Rule:—
RULE. Suppose the ciphers at the right of multiplicand, or multiplier or both omitted, find the product of the resulting numbers, and
to the right of this product place as many ciphers as were supposed
to be omitted in multiplicand, or multiplier or both together.

Ex. Multiply 47600 by 47; 257 by 64000, and 7900 by 83000. Here, omitting the ciphers on the right, or supposing them to be omitted, we have

47600	257	7900
47	64000	83000
3332	1028	237
1904	1542	632
2237200	16448000	655700000

where the ciphers are annexed at last to the right of the products obtained in the ordinary way, to give the other figures their proper local values,

Thus, in the first case, when we multiply 6 by 7, we really multiply 600 by 7, and 600 multiplied by 7 gives 4200; therefore two ciphers are annexed after 2 in the product.

In the second case, when we multiply 7 by 4, we really multiply 7 by 4000, and 7 multiplied by 4000 gives 28000; therefore three ciphers are annexed after 8 in the product.

In the third case, when we multiply 9 by 3, we really multiply 900 by 3000, and 900 multiplied by 3000 gives 2700000, therefore five ciphers are annexed after 7 in the product.

- 78. If the multiplicand and multiplier change places, the product must be the same as before, otherwise the same numbers would have more products than one (Art. 64). Hence, it is convenient to make the larger number the multiplicand and the smaller number the multiplier.
- 79. The following Proofs are generally adopted in Multiplication.
 (1) Interchange multiplicand and multiplier; the product ought to be the same.
- (2) By Casting out the mines. We cast the nines out of a number thus: add together all its figures, omitting every 9, and if the sum be greater than 9, replace it by the sum of its figures, and if the new sum be greater, replace it by the sum of its figures, and so proceed till we have a sum less than 0.

Cast the nines out of multiplicand and multiplier. Multiply the results, and cast the nines out of their product, noting the new result: now cast the nines out of the product, and if the result coincide with the one previously noted, we presume that the work is correct.

- 80. We may mention here that the above test fails in the three following cases:-
- If the order of figures in the product be misplaced, as 86 for 68.
 If the errors made compensate each other, so far as the sum of the digits is concerned, as 65 for 83.
- (3) If 9 be written for 0, or 0 for 9, or either be inserted or omitted too often; as 59 for 50, or 597 for 57, or 708 for 78, and so on.
 - Ex. Multiply 5867 by 3478, annexing the proofs.

20405426...5 Prodt. 20405426

Beginning at the left hand, we cast the nines out of the

Multiplicand thus:—13, 19, 26; replace 26 by the sum of 2 and 6 or 8.
 Multiplier thus:—7,14,22; replace 22 by the sum of 2 and 2 or 4.

Now multiply 8 by 4, giving 32, which replace by the sum of 3 and 2 or 5; and note this result.

(3) Product thus: -6, 11, 15, 17, 23; replace 23 by the sum of

(3) Product thus:—6, 11, 15, 17, 23; replace 23 by the sum of 2 and 3 or 5.

As this result coincides with the president one are presented to

As this result coincides with the previous one, we presume the work is correct.

Examples XII.

- Multiply 946 by 61; 869 by 89; 917 by 46; 909 by 88; 463 by 608; 417 by 739; 3259 by 497, and 692 by 73.
 - 2. Multiply
 - (1) 47691 by 27; 28573 by 35; 716281 by 48; 39265 by 39.
 - (2) 129385 by 66; 138476 by 81; 480765 by 97; 829741 by 59. (3) 8241763 by 123; 921846 by 158; 827941 by 376.
 - (4) 5086927 by 495; 254037 by 2980; 4785328 by 7802.
 - (5) 56380477 separately by 35, 48, 72 and 132.
 (6) 67836479 separately by 356, 4378 and 78539.
 - (7) 70870096 separately by 404, 3009 and 900807.
 - (8) 279420 by 7350; 678000 by 87600; 80108 by 7770. (9) 56348 by 50601; 876000 by 678000; 896385 by 6687400.
 - (10) 57483000 by 40, 900, 430, 24500 and 4670000.

	Find			

3. Find t	he product of			
(1)	(2)	(3)	(4)	(5)
45678	3124791	436712	1100785	4532815

8901234	7000608	7640950	8743590	123456789

- 4. Find the values of :-
 - (i) 704745×615; 469830×369; 391525×861.
 - (2) 1174575×2214; 3523725×2583; 926196×7896.
- (3) 920685 x 7098; 4465348 x 7000608; 7650329 x 600509. (4) 400905703206 x 7008130502; 8070906050493 x 64032000005.
- (5) 6709802607508 x 2005032057; 1310275031496 x 20456300170.
 What is the difference between 23456 multiplied by 996, and
- What is the difference between 23456 multiplied by 996, and the remainder in subtracting 4 times 23456 from 23456000?
 A bigha of land costs 784 rupees, what will 203 bighas cost?
- 7. If there are 432 pages in a book, how many will there be in 80704 such books?
- 8. If I give 125 boys 79 marbles each, how many shall I have left out of 10000?
- 9. 79432 copies of a newspaper are printed daily. How many are printed in a year of 314 days?
- 10. The cost of constructing a Railway is 61303 rupees per mile: what will 701 miles cost?
- 11. An army consists of 295 battalions of 34618 men each; what is the whole number of men in the army?

In a town there are 734 houses; 345 of them contain, on an average, II persons each and the rest 15 each. How many persons reside in the town?

13. If a master employs 73 workmen, each of whom receives 34 rupees per month, how many rupees does he pay away per month?

 If of 20000 shells used in war, 3648 are 36 pounders, 11275. are 24 pounders, and the rest 18 pounders; what is the total weight

(in pounds) of the whole? 15. A clock strikes 114 times in a day. How often will it strike in 365 days?

16. A town has 436 streets. Each street contains on an average 6422 inhabitants. What is the population of the town?

17. A directory contains 798 pages. There are 72 names in each page. How many names are in the directory?

18. 343 paving-stones are required for every yard in a street. There are 18742 yards in the street. How many paving-stones will the whole street require?

19. The distance of the Earth from the Sun is found to be 11608 times the Earth's equatorial diameter, and that diameter is 7926 miles. Required the distance between the Earth and the Sun.

India contains about 1466576 square miles and the population is reckoned to be about 189 persons to every square mile; what is the whole population of the country?

81. To find the product of more than two numbers, multiply the product of two of the numbers by the third, the result by the fourth, and so on. The final result is called the continued product of so many factors.

Thus, the continued product of 3, 5, 3 and 47=3×5×3×47=15 x8x47 = 120 x 47 = 5640, and 3, 5, 8 and 47 are factors of 5640.

82. The continued product of any numbers will remain the same, however we may change the order of its factors. Thus, since $4 \times 2 \times 5 \times 7 \times 3 = 8 \times 5 \times 7 \times 3 = 40 \times 7 \times 3 = 280 \times 3 = 840$,

and $5 \times 4 \times 2 \times 3 \times 7 = 20 \times 2 \times 3 \times 7 = 40 \times 3 \times 7 = 120 \times 7 = 840$; .. 4×2×5×7×3=5×4×2×3×7.

Ex. Find the continued product of 3471, 7 and 52. 347 I

24297 13 Here, we first multiply 3471 by 7, and the product is 52 24297; again multiply 24297 by 52, and the product is 48594 factors is 1263444. 1263444; thus the continued product of the several 121485

1263444

83. If one or more of the factors in any continued product be o, the whole product is o. (See Art. 65.)

Examples XIII.

1. Find the continued products of :-

(1) 4, 7, 25. (2) 13, 15, 17. (3) 18, 19, 20. (4) 407, 18, 5. (5) 729, 8, 61. (6) 7184, 6, 12. (7) 35, 32, 14, 29. (8) 35, 29, 43, 87. (9) 33, 13, 15, 44, 50. (10) 27, 57, 35, 1277. (11) 156, 13, 365, 78. (12) 18, 19, 35, 24, 12, 17. (13) 340, 255, 783. (14) 675, 225, 180, 125.

2. A library contains 3275 volumes, and each volume on the average 493 pages, and each page 39 lines. How many lines are there?

3. If the earth moves round the Sun at the rate of 68000 miles an hour, how far will it move in 365 days of 24 hours each?

4. If every page of a book contains 36 lines, and each line on an average 11 words, how many words would there be in 157 pages?

5. If each of 36 trucks in a luggage train contains 18 barrels of cement, and each barrel 36 maunds, how many maunds is the train carrying?

6. How many yards of silk are there in 9 packages, each containing 8 parcels, each parcel 26 pieces, and each piece 53 yards?

7. In a school there are 10 classes; each class has 4 desks, each desk holds 18 boys; how many boys are there in the school?

 If 37 labourers earn 39 rupees each per day; how many rupees do they all earn in 36 working days?
 If every man lived to marry and have 8 male children, how

many great-great-grand children of the male sex could every one expect to have?

10. A Railway passenger train consists of 32 carriages; each

10. A Rallway passenger train consists of 32 carriages; each carriage is divided into 12 compartments; in each compartment there are 5 benches and on each bench there is space for 8 persons; how many persons can the train carry?

84. When a number is multiplied by itself once, twice, thrice four, See, times, the product is called the second, third, fourth, fifth, &c., power of that number respectively. The second and third powers of a number are commonly termed its square and cube respectively. The number itself is called its first power.

85. These powers are often indicated by small numerals 2,3,4,5, δcc, placed above the number to its right, which express how often the number is repeated in the product. The small numerals so used are therefore called the indices or exponents of the several powers. Thus, ξ² = χ, =2 1, 2, 3 is the second bower or square of ξ.

Thus, $5^2 = 5 \times 5 = 25$; 25 is the second power or square of 5. $5^3 = 5 \times 5 \times 5 = 125$; 125 is the third power or cube of 5.

5⁴=5×5×5×5=625; . 625 is the fourth power of 5, and so on. 86. If the three signs +, -, ×, occur in an expression, the operation of Multiplication is to be performed first and then that of Addition or Subtraction.

Thus, $4 \times 4 \times 3 + 3 \times 3 \times 2 - 4 \times 2 \times 1 + 2 \times 1 \times 0 = 48 + 18 - 8 + 0$ = 66 - 8 = 58.

Examples XIV.

- 1. Find the souares of :-
- (1) 1, 2, 3, 4, 5,...25; 39, 46, 54, 86, 99. (2) 172, 237, 906, 987. (3) 729, 873, 1043, 5496. (4) 7342, 9384, 8796, 1234.

2. Find the cubes of :-

(1) 1, 2, 3, 4, 5,...25; 37, 48, 68, 77. (2) 88, 97, 123, 456. (3) 308, 876, 765, 999. (4) 987, 5386, 9876, 1234.

3. Find the fourth powers of :-(1) 678, 305, 987, 988.
(2) 908, 3271, 8004, 9999

4. Find the values of :— (1) $1^2 + 2^2 + 3^2 + 4^2 + 5^2 + 6^2 + 7^2 + 8^2 + 9^2$. (2) $23^2 + 12^2 - 3^3$.

(3) $5^3 - 4^2 = 8^2$. (4) $1^3 + 2^3 + 3^3 + 4^3 + 5^3 + 6^3 + 7^3 + 8^3 + 9^3$. (5) $2^4 + 3^4 - 1^4$. (6) $25^2 + 28^2 - 20^2 - 18^2 + 15^2$. 5. Simplify the following expressions:

(1) 8×4-3×6+4×3-2×1+5×2+3×7 (2) 5×6×3+4×3×0-2×1×4+3×6×4-2×2,

(3) 8×6×3×1-3×6×2×4+4×6×7×4-7×8×2×0.

(4) -9×6×2×3+7×4+4×6×3×5-3×6×7×0×5+2×3×4. (5) 7°+2×3°+3×5°+4×9°. (6) 3°×2+2×3-2°×3+6×13. (7) 23°-11°+115×111°-110°+112°.

 $(7)^23^2-11^4+115\times 11^2-110^2+112^2$ $(8)^3^3+3\times 4\times 5+5^3-4^3-2\times 4-2^3+6^2-3^3$

IV. DIVISION.

87. Division is the method of finding how many times one given number is contained in another given number. The former of these numbers is called the divisor, the latter the dividend, and the number telling how many times the quotient. The number left after the operation, is finished, is termed the remainder.

88. In dividing one number by another, we obviously take the latter number from the former, as often as we are able, according to the principle of Subtraction before explained. Hence Division bears the same relation to Subtraction, as Multiplication bears to Addition.

Thus, to divide 26 by 8, means that we are to 26(1, 1, 1) and how many times 26 contains 8, and the operation at the side shews that 26 contains 8, 2 times 18 with a remainder 2. Here 26 is called the divided of the diviser, 3 the quotient and 2 the remainder.

89. Hence, by division we break up a given number into as many equal parts as there are units in another given number, and thus find one of these parts.

90. Division is of two kinds, simple and compound.

(i) When the dividend and divisor are both abstract numbers, or both concrete numbers of one and the same denomination; or when the divisor is an abstract number, and the dividend a concrete number of one denomination, it is called Simple Division.

(ii) When the dividend is a concrete number of the same kind, but of different denominations of that kind, and the divisor an abstract number; or when both the dividend and divisor are concrete numbers of the same kind but of different denominations of that kind, it is called Combound Division.

91. When there is no remainder, the division is said to be exact and since the Quotient tells how many times the Dividend contains the Divisor, it follows that Dividend = Divisor \(\circ\) Quotient. But when there is a Remainder, the division is called inexact, and the Dividend = Divisor \(\circ\) Quotient + Remainder.

92. The operation of Division is expressed by means of the sign+and sometimes /, which is read divided by or simply by. It is also denoted by writing the dividend above the divisor with a line between them.

Thus 42+7 denotes that 42 is to be divided by 7, and is read 42 divided by 7 or simply 42 by 7. Also 42/7 and 49 mean 42+7.

93. In division, the quotient is an abstruct number, if the dividend and divisor are both abstract or both concrete numbers, but the quotient is a concrete number, if the dividend is a concrete number and the divisor an abstract number. The divisor, if concrete, must be of the same kind as the divident.

Thus, 45 divided by 5, or 45 rupees divided by 5 rupees, gives the abstract number 9 as quotient, for 5 or 5 rupees taken of times gives 45 or 45 rupees, and 45 rupees alken of 12 rupees, and 45 rupees divided by 5 gives the concrete number of 2 rupees have given be divided into 5 equal parts, each of these parts will contain 9 rupees. Also 45 rupees divided by 5 yards has no meaning, according to the definition of Division in Art 93.

94. As Division is the reverse of Multiplication, it follows that, by a reversed process, the Multiplication Tables must furnish the means of obtaining the quotient, when the divisor does not exceed 20 and the dividend 400.

Ex. 1. Divide 96 by 8.

Since 8 x 12 = 96; therefore 96+8 gives 12 as quotient.

Ex. 2. Divide 259 by 17.

Since $17 \times 15 = 255$, and 259 - 255 = 4; therefore 259 + 17 gives 15 as quotient and 4 as remainder.

Examples XV. (MENTAL DIVISION.)

1. How many times does 8 contain 2? 36 contain 3? 20 contain 4? 35 contain 5? 24 contain 6? 56 contain 7? 81 contain 9?

- 2. Divide 14 by 2; 12 by 3; 48 by 4; 20 by 5; 42 by 6; 49 by 7; 32 by 8; 108 by 9; 90 by 10; 77 by 11; 96 by 12.
 - 3. Divide
 - (1) 56 separately by 2, 3, 4, 5, 6, 7, 8, 9, 12 and 14. (2) 98 separately by 2, 5, 7, 9, 13, 15, 17, 18 and 19.
 - (3) 168 separately by 2, 7, 8, 9, 6, 12, 11, 15 and 18.
 - (4) 288 separately by 4, 7, 9, 10, 6, 8, 12, 15 and 17.
 - (5) 342 separately by 3, 6, 8, 9, 4, 11, 13, 15, 16 and 18.
- (6) 172 by 9; 141 by 11; 128 by 14; 257 by 16; 195 by 19.
- 4 In 54, how many times is 8, and how many over? How many times is 15 contained in 195? In 240, how many times is 18, and how many over?
 - If 16 be taken 14 times from 228, what is left?
 What is the 9th part of 36, 54, 108 and 144?
 - 7. To how many boys can I give 9 marbles if I have 153?
- 8. At a cricket match 11 players make 132 runs. If each made the same number of runs, how many did each make?
- A Patsala consists of 128 boys and they are made to stand in 8 rows; how many are there in each row?
- 10. If 320 rupees are shared equally among 16 men; how many does each man receive?
 - Divide 132 oranges equally among 7 girls and 5 boys.
 Divide 96 pencils equally among 8 boys.
 - 13. Bhuban spent 180 pice in oranges, buying them at the
- rate of 6 for 3 pice; how many oranges did he buy?

 14. A boy, having a basket containing 214 oranges, distributed them equally between his 8 school-fellows and himself; the number
- which remained he gave to his school-master; how many did the school-master receive?

 15. A man bought 11 cows at 18 rupees each, and sold them so
- as to gain 99 rupees; what did he sell each cow for?

 16. How many seers of sugar at 5 annas each can be bought for 330 annas?
- 17. A woman bought 180 eggs at 3 for 2 pice and 275 more at 5 for 3 pice, and sold the whole lot at 13 for 19 pice; what does she gain or lose?
- 18. If 5 men can do a piece of work in 18 days, how long will it take 9 men to do the same work?

 19. How many penknives, worth 8 annas each, ought to be
- exchanged for 144 pen-holders at one anna each?

 20. A man walked 306 miles in 18 days; how many miles didhe walk per day?

SIMPLE DIVISION.

95. When the dividend is a large number, but the divisor less than 20, the division is called Short Division and can be done by the following Rule.

RULE. Place the divisor and dividend thus : divisor) dividend.

From the left of the dividend cut off a number not less than the divisor but less than to times the divisor, giving the first partial dividend. Find by the sid of the Multiplication Tables how often the divisor is contained in this dividend; put down the quotient under the units' figure of this dividend, and take notice of the remainder (whether it be any number or o). On the right of this remainder, conceive in your mind to be placed the lesst number of the figures next following in the dividend which, affixed to the remainder, will make a number not less than the divisor. Proceed, as above, with this new partial offer the first figure in the quotient a cipher for every figure bright down from the dividend which, affixed to the remainder, makes a number less than the divisor.

Continue this process till all the figures of the dividend have been thus brought down; and if there be any remainder at the end of the operation, write it as a remainder distinct from the quotient.

Ex. 1. Divide 612459 by 7.

7)612459

87494 rem. 1.

From the left of the dividend cut off a number not less than 7 but less than 70: that is, cut off 61, our first partial dividend. Now 7 is contained in 61. 8 times and 5 over: put the 8 under

the 1 in 61, and to the right of the remainder 5 affect to 2 fix the next figure of the dividend 4, making 52, the second partial dividend. But 7 is contained in 52, 7 times and 5 over; put 7 in the quotient, and to the right of the remainder 3 affect the next figure 4 making 34, the third new dividend 2 and 50 process.

The above operation is usually performed in saying:—
7 in 61, 8 and 5 over; in 52, 7 and 3 over; in 34, 4 and 6 over; in
65, 9 and 2 over; in 29, 4 and 1 over (as remainder).

Thus the quotient is 87494, and the remainder 1.

Ex. 2. Divide 61245 by 15.

Here 15 in 6 goes no times, but 15 in 61 goes 4 times and 1 over; write 4 under the 1. Then 15 in 12 goes no times, but 15 in 124 goes 8 times and 4 over; write 0 under the 2 and 8 under the 4; lastly 15 in 45 goes

3 times write 3 under the 5. Thus the quotient is 4083.

96. The truth of the above method may be shewn thus :- Since 61245 = 61 thousands +2 hundreds +4 tens +5 units,

=60 thousands + 12 hundreds + 4 tens + 5 units, =60 thousands + 124 tens + 5 units.

= 60 thousands + 124 tens + 5 units, = 60 thousands + 120 tens + 45 units.

.. 61245 divided by 15 gives as quotient 4 thousands+8 tens+3 units or 4083.

Examples XVI

Divide

(1) 462 separately by 3, 6, 8, 9, 10, 11 and 12.

(2) 682 separately by 3, 4, 6, 8, 9, 11, 14 and 15. (3) 8425 separately by 5, 7, 8, 10, 13, 16, 17 and 19.

(4) 6876 separately by 2, 3, 7, 9, 11, 12 and 14.

(5) 35298 separately by 3, 5, 9, 7, 10, 12 and 18.

(6) 348 by 2; 4596 by 3; 276284 by 4; 84375 by 5.

(7) 53844 by 5; 536074 by 7; 95832417 by 8; 3158367 by 10.

(8) 7163253651 by 9; 1234567890 by 11: 9876543 by 12. (9) 27643532 by 14; 35762445 by 15; 47623554 by 18.

(10) 34672352 by 16; 987654321 by 17, by 18, by 19, by 20.

2. If 1674 men are drawn up in 18 columns, how many men

are there in each column? 3. 1 distributed 2160 marbles among a number of boys, and

gave each boy 12 marbles; how many boys were there? 4. What is the 15th part of 135000? the 11th part of 101112?

A farmer has 1786 sheep divided into 19 equal flocks. How many sheep are there in each flock?

6. A farmer spent 1872 rupees in the purchase of oxen. Each ox cost 12 rupees. How many oxen did he buy?

7. If the sum of 18 and 30 be divided by their difference, and the quotient be multiplied by the product of 16 and 27, what is the result? 8. A man gives 14 cows and 35 sheep for 55 bags of potatoes

worth 7 rupees per bag ; if each sheep was worth 3 rupees, what did he get for each cow?

97. When the dividend and divisor are both large numbers, the division is called Long Division and can be performed by the following general Rule. RULE. On either side of the dividend draw curved lines ; place

the divisor on the left and the figures of the quotient as they arise on the right; thus

divisor\dividend(ouotient

Then try to find how often the first one or two figures on the left hand of the divisor are contained in the first one or more of those of the dividend, and place the result on the right as the first figure of the quotient; and the product arising from the multiplication of the divisor by this figure being subtracted from the dividend, bring down or annex to the right of the remainder the next figure of the dividend. Proceed as before, and continue the process till all the figures of the dividend have been brought down; then the quotient, and the remainder if any, will be obtained.

If at any stage of the process, the divisor is greater than the partial dividend, affix a cipher to the quotient and bring down the next figure of the dividend. Continue this process till the partial dividend is greater than the divisor and then proceed as before.

Ex. 1. Divide 75035 by 349.

349)75035(215 608 523

Here, the first figure 2 in the quotient is obtained by inquiring how often 3 is contained in 7, or 34 in 75; then, after multiplying 349 by 2 which from

75; then, after multiplying 349 by 2, which, from the places of the figures, represents 2 hundreds, and subtracting the product which is 698, from 750, we have a remainder 52; to this the next figure 3

1745 of the dividend is anisted to from the partial dividend 323, Nov seek how often 3 is contained in 5, or 34 in 5, and the quotient being 1, 1 ten is annexed to the 2 hundred already obtained; multiplying 349 by 1, which means 1 em, and subtracting the product 349 from 333, we get the remainder 174. Bring down the last figure 5 of the dividend to form the partial dividend 1745, and we find the corresponding quotient to be 5 units smartly for 349 leaving no remainder. Therefore the whole quotient is 21°.

98. Supplying the auxiliary digits omitted in the above operation the process would stand thus:—

349)75035(200+10+5

5235 3490

> 1745 1745

Ex. 2. Divide 39875365 by 8654.

8654)39875365(4607

34610

34610

greater; therefore take 39875 for the first 32593

0578 amset the next figure of the dividend s, giving inst the divisor of times; put 6 in the quotient, multiply 8654 by 6, placing the product 51924 under 52953, and subtract, leaving 660, Again, to 650 bring down the next figure 6, giving 6696 the third parameter of the subtract leaving 6606. Lauly to 660 bring down the sast figure 8, giving 6696, the fourth partial dividend. It contains the divisor 7 times; put 7 in the quotient, multiply 8654 by 7, Backing the

product 60578 under 66965, and subtract, leaving a remainder 6387. Thus the quotient is 4607 and the remainder is 6387.

99. When the divisor is terminated by one or more ciphers, we use the following Rule.

RULE. Cut off all the ciphers on the right of the divisor and as many figures from the right of the dividend :- for the quotient, divide the remaining figures of the dividend by the remaining figures of the divisor (Arts. 95, 97), and for the final remainder bring down to the particular remainder the figures cut off from the dividend.

Ex. Divide 20573206 by 80 and by 345000.

(2) 345,000)20573,296(59 (1) 8,0)2057329,6 257166 - 16 1725

3323 3105

In the first example, in dividing by 8 the remainder is 1, to which we bring down the figure cut off 6, giving 16 for the final

remainder, and 257166 for quotient. In the second example, the remainder in dividing by 345 is 218. to which we bring down the figures cut off 296, giving 218296 for the final remainder and 59 for quotient.

100. The Proofs usually adopted in division are the following :-

(1) To the product of the divisor and quotient add the remainder (if any) : if the result coincides with the dividend, we presume that the work is correctly performed. (2) By casting out the nines.

(a) From the sums of the digits in the divisor and the quotient subtract 9 as many times as possible, and set down the remainders to the left and right of a cross sign.

(b) Multiply the two remainders and from the product subtract 9 as often as possible. Put down the remainder below the cross sign,

(c) Lastly subtract the remainder from the dividend and from the sum of the digits of this difference subtract 9 as many times as possible and set down the remainder above the cross sign. If the upper and lower figures agree, it is presumed that the operation is correct.

Ex. Find the quotient and remainder when 275487 is divided by 736.

Division. Proofs. (2) 7+3+6=16, rem. 7 736)275487(374 and 3+7+4=14, rem. 5. 2208 5468 2244 5152 1122 2618 3167 2944 275264 223 223

275487 7×5=35, rem. 8. Thus the quotient is 374 and the remainder 223.

Also 275487 - 223 = 275264, and 2+7+5+2+6+4=26. rem. 8.

101. If all the four signs +, -, x, + are used together in an expression, the operations of Division and Multiblication are to be performed first and next those of Addition and Subtraction.

Ex. Find the value of 14+12+6 x4-3 x2+6 x72+12 The expression = $14+2\times4-3\times2+6\times6=14+8-6+36$ = 58-6=52

Divide :-

(1) 237876093 by 5605, by 9089, by 40857, and by 57085. (2) \$1229 separately by 10, 20, 30, 40, 50, 80, 90.

(3) 342604 separately by 100, 400, 600, 800, 900.

(4) 78534826 separately by 800, 12000, 3200, 475000. (5) 3854269734 separately by 310, 5900, 587000, 90900. (6) 25413286 by 7900; 19054832 by 83000; 26799534687 by 7800000

4. Find the values of :-

(1) 192+16+720+18+795+15-1786+19.

(2) 3871+49+6935+95-5432+56-1375+25+4590+45. (3) 56+81+3+8×7×9+12×136+17-72+18+6×3.

(4) 12×16+8+17×6-18×32+8-27+9×7+8×30+15+56+14.

(5) 15 × 37153 +73474 -67152+4+40734×2-5485×75.

5. If a bag contains 103 potatoes, how many will be required to hold 7432274 potatoes?

6. If each carriage contains 57 passengers, how many carriages

are there in a train carrying 969 passengers?

7. Each of 156 boys uses 12 pen-nibs, and a box contains 144 nibs. How many boxes are required? 8. A confectioner sells 23475 maunds of sweetmeats in a year

of 313 days; how many maunds does he sell in a day?

9. Supposing a Railway train to travel from Calcutta to Delhi, a

distance of 924 miles, in 44 hours, what is the average speed per hour? 10. The population of a country is 3083220 and its area is 7341

square miles. How many people are there on an average to each sonare mile? 11. Find the number of pages in a book which has on an average

207 words on a page, and contains 201411 words altogether? 12. How many minutes will a wheel be in turning round 805702

times, if it turn 158 times in a minute? 13. What number multiplied by 79 will give the same product

as 257 multiplied by 553? 14. A shopkeeper sold 267 shawls for 4005 rupees, gaining there-

by 4 rapees on each shawl; what had each shawl cost him? 15. The population of a certain village is 21510, and one out of

45 dies annually. How many die in a year? 16. Find how many times the numbers 11, 15, 19, and 23 must

be equally repeated to make 13668. 17. Find the 532nd part of 1004416. What is the 365th part

of 36865365? 18. How many pages contain 30888 words, every page having

52 lines of 9 words each ? 19. If 168465 maunds of rice be distributed equally among 11231 famine-stricken men, how many maunds will each receive? and if the family of each consist of 5 persons, what will be the share of each person?

20. The rays of light comes from the Sun to the Earth in 408 seconds; at what rate does light move per second, the distance of the Sun from the Earth being 93000000 miles?

V. THE USE OF BRACKETS.

102. Brackets, which are of several kinds, as (), { }, [], are used to denote that all numbers included within any pair of them are to be considered as forming but one number, and are therefore to be equally affected by any number not included within the same pair of brackets.

Thus, (2+3+7) denotes that 2, 3 and 7 are to be taken as making one number, i. s. whatsoever, outside the brackets, affects 2 in any

way, must also affect 3 and 7 in the same way.

A vinculum is a sign sometimes used instead of brackets. It consists of a line drawn over the numbers to be considered as forming one number.

Thus, 2+3 express the same thing as (2+3).

103. When two or more numbers, connected by the signs of operation are enclosed in a pair of brackets, the operations of arithmetic indicated inside the brackets are to be performed before the brackets are removed, Thus,

Ex. 2.
$$22-(4\times3+5-6+2)=22-(12+5-3)$$

$$=22-(17-3)=22-14=8.$$
104. When a number immediately precedes an expression

included in a pair of brackets, this number is to be multiplied by the number obtained after removing the brackets.

Thus, $7+4(5-2)-6\times3=7+4\times3-18=7+12-18=19-18=1$.

105. When an expression is included in more than one pair of brackets, it is convenient to remove the innermost bracket first, then the innermost of those that remain, and so on, till all the brackets are removed.

$$= 25 - [\{150 - 24 - 8(24 - 10)\} \div 2] \times (15 - 12)$$

$$= 25 - [\{150 - 24 - 8 \times 14\} \div 2] \times 3$$

 $=25-[14+2]\times3=25-7\times3=25-21=4.$

106. If the sign+(plus) precedes a bracket, the bracket may

be removed without affecting the result. Thus, since 7+(5-3)=7+2=9, and 7+5-3=12-3=9.

therefore, we have 7+(5-3)=7+5-3.

107. If the sign -(minus) precedes a bracket, the bracket may be removed, provided the signs of all the numbers, inside the bracket be changed from + to -, and from - to +.

Thus, since 29 - (7 - 5 + 3) = 29 - (2 + 3) = 29 - 5 = 24, and 29 - 7 + 5 - 3 = 34 - 10 = 24,

therefore, we have 29-(7-5+3)=29-7+5-3.

108. The sign signifies therefore, and is often used in stating a method by which an answer has been obtained. The sign stands for because or since, and is used in stating a reason.

Examples XVIII.

1. Find the values of :-

- (1) 10+(5-3)-(17-8)+(16-11)+25-(6-3+4).
- (2) 20-10-3-6+(15-3)-(16-9)-(5+6)+(4+9), (3) 8+4(12-7)-3(9-5)+7(16-19+5)-(18-6+7).
- (4) 3{8+25-3(20-12)}. (5) 3{8+(25-3)20-12}.

- (6) 287-[{15×10-2(12-8)(2×12-10)}+2]×15-10-2.
- (8) $605 \{(95 11 10) + 237\}$. (7) 1520 - {610 + 703 - 608}.
- (a) $86 \{(59 48) + 16 (59 49)\}$. (10) $168 \{(70 39) + (90 83)\}$.
- (11) 1246-(362-156)-{371-(495-386)}.
 - 2. Find the values of :-
 - (1) (1536-487)-1392+29+7×5. (2) 5880÷(167 - 132)×6
- (3) (194+65) ×7+(352-220)+11-952+(91-35).
- (4) (67893-8637)+823+7546×(2356-945)-(9870×170). (5) {(312570×598+76125×47+318+3)-155146}+(6139×15).
- 3. If the sum of 274 and 108 be multiplied by their difference
- and the product be divided by 166, what will be the quotient? 4. If the sum of 103, 29, and 267 be divided by 19, and the quotient be multiplied by 57, and the product be diminished by 197,
- what will be the remainder? 5. Multiply (325-293) by (306+17) and to the product add
 - (Icco+99). 6. From 34856 subtract (763×41) and to the remainder add
- {1998+(663-441)}. 7. Find the difference between 876 and 450 - 368 + 140.

 - What number subtracted from (2471+56) will leave (3863-1408) as remainder?
 - 9. Find the difference between
 - 3210+401-(67-59) and 342-(401-382).
 - 10. From the sum of the greatest number of 9 and 10 digits subtract the difference of the least numbers of 10 and 11 digits. 11. From the sum of the greatest numbers of 4, 5 and 6 digits
- subtract the sum of the least numbers of 3, 4 and 5 digits. 12. Find the values of :-
- (t) $6+8[3\times6+\{3+7-(8+3-6)-(2\times6+3+3-2)\}]$.
- (2) $66 \times 37 8(9 7) \times 6 (27 + 12) + 13 + (17 + 15 + 39 50) \times 5 9 \times 7$.
- (3) $\{(7+75)\times43+(4698+171)+9\}+\{(73+14-2)-(16+2+4\times7)\}$
- (4) $8[4 \times \{(360 \times 120) (47 + 13) + 3\}] + \{(360 \times 120) + (65 25) + 5\} + 5401$ (5) 108+9×[76-9[63-7(9×3-4×8+52-10×2)-(23×0-24)]]
- II X 12: (6) $23 \times 11 \times 3 + 7[206 \times (8+6-13) - \{(14-8) \times 7 - (15+5-11) \times 2^3\}$ $+(6^3-13\times2^3)+(6\times8\times15+5)$]+ $(2\times5+3^2-3\times4\times7)$.
- (7) 84 7[-11-4[-17+3(8-9-5)]].
- (8) $5 \times \{4 2[4 2(4 + 3)]\} 4 \times \{4 2[4 2(4 + 3)]\}$
- (9) 19+12×15-120-4+{29-13×2+(14-0)×3}.
- (10) $9 \times [125 + 5(7-2) \times 8(9-7) + 4(7 + 2(3+8))]$

VI. MISCELLANEOUS PROPOSITIONS.

(IN THE FUNDAMENTAL OPERATIONS.)

109. Sum, difference, &c.

(1) Given the difference between two numbers and the greater, to find the smaller number.

RULE. Subtract the given difference from the greater number, and the result is the required smaller number.

Ex. If 34060 be the difference between two numbers, and the greater number is 48752; what is the less number?

The less number = 48752 - 34060 = 14692.

(2) Given the difference between two numbers and the smaller, to find the larger number.

RULE. Add together the given difference and the smaller

number, and the sum is the required larger number.

Ex. The difference between two numbers is 14610 and the less is 4007; what is the larger number?

The larger number = 14610 + 4007 = 18617.

(3) Being given the sum and difference of two numbers, to find

RULE. To find the larger number, add together the given sum and difference, and divide the result by 1. To find the smaller number, subtract the given difference from the given sum and divide the result by 2.

Ex. 1. The sum of two numbers is 25264, and their difference is 736; what are the numbers?

The larger number = (25264 + 736) + 2 = 26000 + 2 = 13000. The smaller number = (25264 - 13000) = 12264,

or, the smaller number = (25264-736)+2=24528+2=12264.

Ex. 2. The price of a carriage with horse is 1590 rupees, and the price of the carriage is 324 rupees more than that of the horse. Find the price of each

Here, the sum of the two prices is 1590 rupees and the difference 324 rupees.

., the price of the carriage=(1590+324)+2=957 rupees.

And the price of the horse=(1590-957) or 633 rupees.

(4) Being given the sums of every two of three given numbers, to find the numbers.

RULE. Add together the three given sums, divide the result by 2, and from the quotient subtract separately the three given sums. The several differences are the required numbers.

 $Ex.\ r$. The sum of the first and second of three numbers is 59; that of the first and third is 53; and that of the second and third is 42. Find the numbers.

(59+53+42)+2=77, the first number=77-42=35,

the first number = 77 - 42 = 35, the second number = 77 - 53 = 24, and the third number = 77 - 59 = 18.

Ex. 2. At a game of cricket A and B together score 75 runs; B and C together score 90 runs; and A and C together score 51 runs; find the number of runs scored by each of them.

Here, A, B and C together score (75+90+51)+2 or 108 runs.

.. A scored (108-90) runs = 18 runs, B scored (108-51) runs = 57 runs, and C scored (108-75) runs = 33 runs.

(5) Having given the sum of three numbers, the excess of the first over the second, and the excess of the second over the third, it is required to find the numbers.

RULE. Subtract the sum of the excess of the second over the third and of the first over the third (which may be obtained by adding the two given excesses) from the given sum, and divide the result by 3. The quotient is the least of the three required numbers.

 $\mathcal{E}x$. Divide 53 rupees among A, B and C, so that A may receive 7 rupees more than B, and B 8 rupees more than C.

Here, the sum of the three shares is 53 rupees, and the excess of A's share over C's is 8+7 or 15 rupees,

and 53-(8+15)=53-23=30.

C's share = (30+3) rupees = 10 rupees,
B's share = (10+8) rupees = 18 rupees,
and A's share = (18+7) rupees = 25 rupees.

110. Product, Quotient, Remainder, &c.

(1) Given the product of two numbers and one of them, to find the other.

RULE. Divide the product by the given number, and the quotient thus obtained is the other required number.

Ex. The product of two numbers is 90368, and the smaller number is 256; what is the larger number?

The larger number = 890368 + 256 = 3478.

(2) Given the divisor, the quotient and the remainder, to find the dividend.

RULE. Multiply together the divisor and the quotient, and to the product add the remainder. The result is the dividend. \mathcal{F}_{xx} . If the divisor be 3857, the quotient 489, and the remainder 1305, what is the dividend?

The dividend = 3857 × 489 + 1305 = 1887378.

(3) Given the dividend and the quotient, to find the divisor.

RULE. Divide the dividend by the quotient, and the result is the divisor.

Ex. The dividend is 322601 and the quotient 883, find the divisor.

The divisor = 342604 + 883 = 388.

(4) Given the dividend, the quotient, and the remainder, to find the divisor.

RULE. From the dividend subtract the remainder, and divide the difference by the quotient. The result is the divisor.

 $Ex.\ \ \emph{I}.$ The dividend is 119376, the quotient 25 and the remainder 2076; what is the divisor?

The divisor = $(119376 - 2076) \div 25 = 117320 + 25 = 4632$.

Ex. 2. A farmer having 2316 sheep, on putting an equal number of them into each of 25 fields, had 16 remaining. How many did he put into each of the fields?

The required number = (2516-16)-25=2300+25=92.

(5) To find the least number which must be added to a given number to make it exactly divisible by a second given number.

RULE. Divide the first given number by the second, and subtract the remainder from the second given number. The difference is the required number.

Ex. What least number must be added to 4856752 to make it exactly divisible by 2163?

4856752+2163 gives 2245 as quotient and 817 as remainder.
the number to be added=2163-817=1346.

(6) To find the least number which must be subtracted from a given number to make it exactly divisible by a second given number. RULE. Divide the first given number by the second, and the remainder is the required number.

Ex. What least number must be subtracted from 90625 that it may be divisible by 727?

90625 + 727 gives 124 as quotient and 477 as remainder.

., the number to be subtracted=477.

(7) To find the greatest number of a given number of digits which is divigible by a given number. Proceed as in the following example:—

Ex. Find the greatest number of five digits which is divisible by 529.

The greatest number of 5 digits is evidently 99999.
99999 divided by 529 gives 189 as the quotient and 18 as the

remainder.
the read. greatest number=99999-18=99981.

(8) To find the least number of a given number of digits which is divisible by a given number.

Proceed as in the following example :-

Ex. Find the least number of six digits which is divisible by 4325.

The least number of 6 digits is evidently 100000.

100000 divided by 4325 gives 23 as the quotient and 525 as the remainder, and 4325 - 525 = 3800, the rend, least number = 100000 + 3800 = 103800.

111. Equidifferent series.

The numbers 1, 2, 3, 4, 5, etc., are called natural numbers, of which 1, 3, 5, etc., are odd, and 2, 4, 6, etc., are even numbers.

(1) To find the sum of any number of the natural numbers beginning with 1.

RULE. Multiply the last number by the next higher number, and divide the result by 2. The quotient is the required sum.

Ex. Add together 1+2+3+4+5+..... , ...+40.

Here, the last number is 40, and the next higher number is 41.

the required sum = 40 × 41 + 2 = 820.

(2) To find the sum of any number of odd numbers beginning with 1.
RULE. The square of the number of times the numbers are

repeated, is the required sum.

Ex. Add together 1+3+5+7+9+......+25.

Here, the number of times the numbers are repeated is 13.

... the sum required=132=169.

(3) To find the sum of any number of even numbers beginning

with 2.

RULE. Multiply the number of times the numbers are repeated by the same increased by 1. The product is the required sum.

Ex. Add together 2+4+6+8+..... +30.

Here, the number of times the numbers are repeated is 15.

the sum required=15×16=240.

(4) To find the sum of any given numbers increasing or decreasing by a fixed number.

Rule. Multiply the sum of the two extreme numbers by the number of terms (or times repeated), and divide the result by 2. The outlined is the required sum. Ex. Add together 2+5+8+11+......+47-

Here, the number of terms will be found to be 16. ... the sum = $16 \times (2+47) + 2 = 16 \times 49 + 2 = 392$.

Examples XIX.

What number subtracted from 850967 will leave 3876?

2. The difference between two numbers is 84489 and the larger is 123456, what is the smaller?

3. The smaller of two numbers is 3087+56299 and their difference is 22371; what is the larger number?

4. The greater of two numbers is the sum of 505, 650, 10 and 9003 and the difference between them is 3287-750. What is the less number?

5. The sum of two numbers is 12640 and their difference 1608; what are the numbers?

6. The sum of the ages of two men is 173 years and the difference between them is 15 years; what are their ages?

 The sum and difference of two numbers are 1426 and 384 respectively; find the numbers?

8. A man bought a pair of horses and a carriage for 857 rupees; the carriage was worth 165 rupees more than the horses; what was the price of each?

9. Two men having met on a journey, found that they had travelled 1200 miles, and that one had travelled 360 miles more than the other; what distance had each travelled?

 Divide 168 marbles between two boys, giving to one 42 more than the other.

11. Ram, Gopal and Hari begin to play at marbles. Ram and Gopal have 77 marbles between them, Gopal and Hari 63, and Ram and Hari 70. How many marbles has each?

12. A basket containing oranges, apples and plums, has 15 more oranges than apples, and 8 more apples than plums. The whole number of fruits in the basket is 112. Find the number of each kind in the basket.

13. Three persons A, B and C, are possessed of certain sums of money, such that A and B together have 120 rupees; A and C together have 140 rupees; and B and C together have 150 rupees. What is the sum possessed by each?

14. Divide 4680 rupees, after giving away 180 rupees to the poor, between A, B and C, giving B 216 rupees more than A, and C 336 rupees more than B.

16. The product of two numbers is 17037006 and one of them is 4858, what is the other? 16. If the divisor be 3857, the quotient 489 and the remainder 1305, what is the dividend?

17. A dividend is 16322853, the quotient is 1754 and the re-

mainder is 129; what is the divisor?

18. The quotient arising from the division of 183926157 by a

certain number is 4938 and the remainder is 5409. Find the divisor.

19. What least number must be added to 34568135 that the sum

may be exactly divisible by 357?

20. What least number must be subtracted from 56854327 that

the difference may be exactly divisible by 7323?

21. By what number must rectioned be divided so that the

quotient may be 51784, and 221 over?

22. What number multiplied by 1617 will give 50696184?23. What least number must we subtract from 57385 so that it

What least number must we subtract from 57355 so that it can be exactly divided by 387? and what least number must we add?
 The sum of the product of two numbers and 355 is 87403; one of the numbers is 216, find the other number.

25. What number must be added to 30984051, that the sum may be exactly divisible by 288?

26. Add together :-

(1)
$$1+2+3+4+\dots+60$$
.
(2) $1+2+3+4+\dots+100$.
(3) $2+5+8+11+\dots+29$.
(4) $1+3+5+7+\dots+31$.
(5) $2+4+6+8+\dots+30$.
(6) $2+6+10+14+\dots+78$.

(7) 5+8+11+14+.....+53.
 (8) 100+97+94+.....+43.
 27. A debt can be discharged in 52 weeks by paying one rupee

the first week, 3 rupees the second week, 5 rupees the third week and so on. Required the amount of the debt.

28. A person goes 3 miles on the first day, 5 miles on the second.

7 miles on the third, and so on. How far has he travelled in a month of 30 days?

29. How many times will a clock strike in a day of 24 hours?

30. Write down 576987, and under it write the eighth succeeding number, and under this latter the next eighth succeeding number and so proceed till nine numbers have been written down; and their sum.

31. Find the greatest and least numbers of 5 digits which are divisible by 327.

32. Find the least number of 6 digits which is divisible by 273.33. Find the product of the two greatest numbers of 5 digits.

34. Divide the greatest number of 7 digits by the least number of 4 digits.

35. Find the sum of the greatest and the least number that can be formed by the digits 3, 2, 0, 1, 5, 8 and 9 taken all together.

112. Addition, Subtraction, &c.

(1) To subtract a number from another consisting of 1 followed by ciphers only.

Rule. Put down as many nines as there are ciphers in excess of the number of figures in the subtrahend; then (beginning from the left) write down in order the differences of each of the figures from 0 except the units' figure, which subtract from 10.

Ex. Subtract 5736128 from 10000000000.

Here are 10 ciphers in the minuend, and 7 figures in the subtrahend; hence put down 999. Again 5 from 9 is 4, 7 from 9 is 2, 3 from 9 is 6, 6 from 9 is 3, 4 from 9 is 5, 2 from 9 is 7, and 8 from 10 is 2. Therefore the required difference is 9994263572.

(2) To subtract mentally the sum of several numbers from a given number.

Proceed as in the following example :-

Ex. Subtract the sum of 1286, 495, 4758, 984 from 15812.

15812 1286 Mentally thus: 4, 12, 17, 23 and 9 = 32; 495 carry 3, 11, 16, 25, 33 and 8=41; carry 4, 13, 20, 24, 26 and 2=28; and 8=1c. carry 2. 8289 Ans.

(a) To subtract mentally from a number the product of two other numbers one of which is less than 20. Proceed as in the following example :-

Ex. Subtract 8 × 549 from 6567.

Mentally thus : 8 x 9=72, and 5=77 : carry 7, add 8 x 4, 30, and 7=46; 549 carry 4, add 8 x 5, 44, and 1=45; carry 4. 4. and 2= 6. 2175 Ans.

113. Multiplication by factors.

To multiply one number by another which can be resolved into factors each less than 20.

RULE. Multiply the given number by each of the factors in succession, and the final product is the required one.

Ex. 1. Multiply 31729 by 648.

648 = 0 x 0 x 8. 31720 285561 285561 20560302 Ans.

Ex. 2. Multiply 43806 by 357, and by 735; making in each case only two partial multiplications.

Er. 2. Multiply 567224 by 48872; and 48872 by 567224; making in each case only three partial multiplications.

Examples XX.

 Subtract \$7364 from 1000000; \$42056 from 1000000000; 7859064 from 1000000000; and 79854 from 10000000.

2. Subtract

- (1) 3671+45+467+2073 from 10608.
- (2) 469 + 10876 + 2468 + 13972 from 38709.
- (3) 1234567+1234+123+12345 from 4567208.
- (4) 3843+396+438+1543+2897 from 12964.
- Subtract mentally :--
- (1) 4×2016 from 8124; 6×1632 from 9798; 8×4506 from 46325.
- (2) 9 × 18764 from 198765 : 7 × 53197 from 3690756.
- (3) 15 × 14567 from 3567824; 18 × 51987 from 37373784. 4. Add 4×123 to 878; 9×2345 to 4675; 8×1071 to 8795.
- 5. Multiply by factors :-
- (1) 98989 by 44; 98909 by 72; 89088 by 96; 79797 by 63. (2) 9785643 by 128; 6301246 by 256; 8725364 by 432.
- 9457283 by 792; 8465729 by 512; 5374896 by 588. (4) 13245 by 1188; 246785 by 1872; 989045 by 15015.
 - 6. Multiply in two lines :-
- (I) 4016 by 637; 3543 by 648; 47862 by 1629; 31127 by 14412.
- (2) 324567 by 486, by 936, and by 13212; 617635 by 1080.
- 7. Multiply in three lines :-(1) 765389 by 64164, by 189279, and by 83256.
- (2) 92135 by 10813212; 459896 by 864729; 1234567 by 4321089. (3) 7893261 by 5678100; 5710987 by 105613212.
 - Multiply 876043 by 1449117 and by 28917136 in three lines. 114. Abbreviated methods of Multiplication.
- (1) To multiply a number by 5.

RULE. Annex one cipher to the right of the multiplicand, and divide the result by 2. The quotient is the required product.

Ex. 1. Multiply 879324 by 5.

2)8793240

4396620=the required product.

Ex. 2. Multiply 6508 by 15.

2)65080 = product by 10.....(1) 32540 = product by 5.....(2)

97620= the required product, adding (1) and (2).

(2) To multiply a number by 25.

RULE. Annex two ciphers to the right of the multiplicand, and divide the result by 4. The quotient is the required product.

Ex. 1. Multiply 57943 by 25.

4)5794300

1448575 = the required product.

Ex. 2. Multiply 7575 by 35-4)757500

189375 = product by 25.....(1) 75750 = product by 10.....(2)

265125=the required product, adding (1) and (2).

Ex. 3. Multiply 6213 by 75.

4)621300=product by 100,....(t)

155325 = product by 25(2) 465075 = the read. prod., subtracting (2) from (1).

(3) To multiply a number by 125.

RULE. Annex three ciphers to the right of the multiblicand, and divide the result by 8. The quotient is the required product.

Ex. Multiply 860078 by 125. 8)860978000

107622250=the required product.

(4) To multiply a number by a number all the figures of which are nines.

RULE. Annex as many cibhers to the right of the multiblicand as there are nines in the multiplier, and from the result subtract the number itself. The difference is the required product.

Multiply 6875 by 999.

6875000 = product by 1000(1) 6875 = product by 1.....(2)

6868125=the reqd. prod. subtracting (2) from (1).

(5) To multiply a number by a number which differs by a small number from 100, 1000, 10000, &c., or from 50, 500, 5000, &c.

Proceed as in the following examples :-

Ex. 1. Multiply 423571 by 98 and by 9997.

(1) 98 = 100 − 2. 423571 × 100 = 42357100 (2) 9997 = 10000 − 3. 423571 × 10000 = 4235710000

 $423571 \times 2 = 847142$ $423571 \times 3 = 1270713$ the product -41509958 the product -4234439287.

Ex. 2. Multiply 6854 by 496.

Here, 496=500-4. 6854×5,00=68540,00+2=3427000

6854×4 = 27416 ... the required product = 3399584.

(6) To multiply a number by 11.

RULE. Add each figure to the figure on its left, beginning with o on the right, carrying I when necessary. The number thus formed is the required product.

Ex. Multiply 75384 by 11.

75384 Here, 0+4=4; 4+8=12, carry 1; 1+8+3=12, carry 1; 1+3+5=9; 5+7=12, carry 1; 1+7=8; but all the necessary wordings are 4, 12, 12, 9, 12, 8.

(7) To multiply a number by 625.

RULB. Annex four ciphers to the right of the multiplicand and divide the result by 16. The quotient is the required product.

Ex. Multiply 4837 by 625.

3023125 = the required product.

115. Squares, Cubes, &c.

(1) To find the square of a number of two figures.

RULE. Increase and diminish the number by the complement of its units figure, and to the product of the two results thus obtained add the square of the complement. The number thus formed is the required source.

Ex. 1. Find the square of 84 and 95.

Here, the complement of 4 is 6, and of 5 is 5.

(1) 84+6=90 and 84-6=78. the read. square= $90 \times 78+6^2$ =7020+36 (2) 95+5=100 and 95-5=90. the read. square= $100 \times 90+5^2$ =9000+25

= 7020 + 30 = 9000 +: = 7056. = 9025. Ex. 2. Find the square of 467.

467 + 67 = 534; 467 - 67 = 400 $.467^2 = 534 \times 400 + 67^2$ $=213600+67^{2}$

शासिक इस्सिवाद 63 Again, 67+7=74: 67-7=60 . 672=74×60+72 = 4440 + 49 = 4489

Hence 4672 = 213600 + 4480 = 218080.

(2) To find the difference of the squares of two numbers.

RULE. Multiply the sum of the numbers by their difference, and the product is the required difference.

Ex. Find the value of (339,2-(319)2.

Here, 339+319=658 and 339-319=20. ., the required difference=658 x 20 = 13160

(3) To express the product of two numbers as the difference of two squares.

RULE. Find the sum and difference of the numbers and divide each result by 2. The difference of the squares of the two quotients is the required difference of two squares.

Ex. Express 81 × 53 as the difference of two squares.

Here (81+53)+2=134+2=67 and (81-53)+2=28+2=14, the required difference=(67)2 - (14)2.

Examples XXI.

Multiply :-

(1) 879326 separately by 5, 25, 75, 125 and 625.

(2) 63945 separately by 15, 35, 75 and 125. (3) 87911365 separately by 5, 25, 75, 125 and 625.

(4) 4439854 separately by 99, 999, 9999 and 99999.

(5) 5792 separately by 96, 996, 9994 and 9998. (6) 8734652 separately by 11, 121, 1331 and 99994.

2. Find the squares of :-

(1) 37, 45, 48, 55, 65, 75, 64, 71, 83, 96 and 125. (2) 108, 149, 156, 183, 215, 391, 478, 456 and 524.

3. Express the following products as the difference of two squares :-65 x 53; 96 x 74; 126 x 84; 245 x 197; 478 x 316.

4. Find the values of :-

 $\begin{array}{lll} (1) & (575)^2 - (425)^2 ; & (101)^2 - (99)^2 ; & (1639)^2 - (739)^2 ; & (1811)^2 - (689)^2 . \\ (2) & (753)^2 - (625)^2 ; & (1723)^2 - (277)^2 ; & (2731)^2 - (269)^2 ; & (678)^2 - (638)^2 . \end{array}$

 Divide : --(1) (8133)2-(8131)2 by 16264; (5874)2-(3795)2 by 2079.

(2) (2250)2 - (1759)2 by 4018; (3156)2 - (968)2 by 2188.

- 6. Find the greatest number of 8 digits which is divisible by 5293.
- 7. Find the least number of 7 digits which is divisible by 7293.

 Find the least number of 9 digits and the greatest number of 8 digits which are divisible by 37213.

116. Division by factors.

When the divisor is the product of two or more factors, we use the following Rule:—

Rule. The quotient is obtained by dividing in succession by each of the factors of the divisor, and the final remainder at each step is obtained by multiplying its particular remainder by all the divisors preceding its own, and adding the preceding final remainder.

Ex. 1. Divide 25872 by 56.

56=7 x 8. 7)25872 Dividing in succession by 7 and 8, the quotient is 462.

Ex. 2. Divide 96500093 by 105.

Thus the quotient is 919048 and the remainder 53.

2 mas the quotient is 919040 and the remainder 33.

117. Abbreviated methods of Division.

(1) To divide a number by 5, 15, 35, 45, 55 or 65-

Rule. Multiply the number by 2 and divide the product respectively by 10, 30, 70, 90, 110 or 130, as in Art. 99. The result in each case gives the quotient and for the true remainder divide the remainder so obtained by 2.

Ex. Divide 86246 by 5 and 15623 by 45.

(1) 85246×2 (2) 1.5017249.2 (3) 1.7249... (4) 1.7249... and the remainder $2 \div 2 = 1$. (2) Thus the quotient is 3247. and the remainder $2 \div 2 = 1$. and the remainder $1 \div 2 = 2 = 1$.

(2) To divide a number by 25, 75, 175, 225, 275 or 325.

RULE. Multiply the number by 4, and divide the result by 100, 00, 700, 900, 1100, or 1300 as in Art. 99. The result in each

case gives the quotient and for the true remainder divide the remainder so obtained by d.

Ex. Divide 37057 by 25, and 905785 by 175.

(1) 37057×4 1,001482,28 1482...28

(2) 905785 × 4 7,00)36231,40 5175...640

Thus the quotient is 1482, and the true remainder 28+4=7.

Thus the quotient is 5175, and the remainder 640+4=160.

(3) To divide a number by 125, 375 or 875.

RULE. Multiply the number by 8, and divide the product respectively by 2000, 3000, or 7000, as in Art. 99. The result in each case gives the quotient and for the true remainder divide the remainder so obtained by 8.

Ex. Divide 005785 by 125, and 1607708 by 375.

(1) 905785 × 8 1,000)7246,280 (2) 1607708 × 8 3,000)12861,664 4287...664

7246 . 280 4287...664 Thus the quotient is 7246, and the remainder 250+8=35. 4287...664 Thus the quotient is 4287, and the remainder $664+8=\overline{83}$.

(4) To divide a number by 625.

RULE. Multiply the number by 16, and divide the result by 10000, as in Art. 99. The quotient is the required quotient and for the true remainder divide the remainder so obtained by 16.

Ex. Divide 3023173 by 625.

3023173 × 16 Thus the quotient is $\frac{4837}{1,0000,4837,0.768}$ remainder 768 + 16 = 48.

(5) The method of Long Division may be much shortened by the use of Art. 112 (3).

Ex. Divide 15218125 by 3854.

3854)15218125(3948 Ans. 36561

6561 Mentally thus: 3×4=12 and 6=18, 18752 carry 1, add 3×5, 16 and 5=21; 33365 carry 2, add 3×8, 26 and 6=32;

2533 rem. carry 2, add 3×8, 26 and 6=32; carry 3, add 3×3, 12 and 3=15.

Then bringing down the next digit in the dividend, repeat the process for the next digit in the quotient.

Examples XXII.

- 1. Divide by factors :--
- (1) 1461408 by 32; 347808 by 56; 1556334 by 162.
- (2) 7825687 by 64; 6598769 by 84; 8791605 by 88.
- (3) 7654325 by 96; 12345678 by 68; 35925814 by 82.
- (4) 76538959 separately by 28, 64, 72, 96; 39541234 by 256.
- (5) 87625432 by 726; 17927618 by 476; 5213742 by 1142.
- (6) 3790603808 separately by 132, 196, 378; 3246541 by 792.
- 2. Divide :--
- (1) 37964 separately by 5, 50, 500, 5000 and 25.
- (2) 8754316 separately by 5, 15, 25, 35, 45, 55, 65 and 75.
- (3) 90273189 separately by 125, 175, 225 and 275.
- (4) 154725876 separately by 125, 375, 625 and 875. (c) 68015637 by 8654: 57300652 by 5120, and 36043536 by 4204.

118. Average, Shares, Barter, &c.

(1) To find the average of two or more numbers.

RULE. Divide the sum of the numbers by their number and the quotient is the required average.

 $\mathcal{E}x$. T. The attendance at a school was 254 on Monday, 326 on Tuesday, 204 on Wednesday and 192 on Thursday. Find the average daily attendance of the 4 days.

On Monday the attendance was 254. 976+4=244.

Wednesday ... 204. .. the average was 244.
Thursday ... 192.

in 4 days 976,

Ex. 2. The yearly expenses of a person during the first 4 years was Rs.675, during the next 5 years Rs.825, and during the following 7 years Rs.977. What was his average expenses?

In 4 years the exp. amt. to (Rs.675 x 4) or Rs.2700, 16)Rs.13664.

5 (Rs.825×5) or Rs.4125, Rs.854. 7 (Rs.977×7) or Rs.6839, the average in 16 years ... Rs.13664 was Rs.854.

(2) To divide a given number into parts, having certain given relations among them.

Proceed as in the three following Examples.

Ex. 1. Divide 184 oranges between Ram and Gopal, giving Ram 7 times as many as Gopal.

If Gopal gets 1 orange, Ram gets 7 oranges; and 1+7=8.

... Gopal's share = (184 + 8) or 23 oranges,

and Ram's share=(23×7) or 161 oranges.

 $Ex.\ 2$. Divide 384 rupees among A,B,C and D, so that for every 5 rupees given to A,B gets 7 rupees, C 8 rupees, and D 12 rupees.

Ex. 3. Divide 1351 nuts among 13 men, 17 women, and 30 children, giving each woman 5 times the share of each child, and each man the share of a woman and a child.

If each child gets 1, a woman gets 5 and a man 5+1 or 6. Therefore 30 children get 30, 17 women get 5×17 or 85, and 13 men 6×13 or 78.

Now, 30+85+78=193; and 1351+193=7.

the children will have 7 × 30 or 210 nuts, the women ...7 × 85 or 595 nuts, and the men ...7 × 78 or 546 nuts.

 $Ex. \not$. How many horses worth 132 rupees each, must be given for 1476 sheep worth 11 rupees each?

The cost of 1476 sheep at Rs.11 each = Rs.1476 × 11 = Rs.16236. And 16236 + 132 = 123. the required no of horses = 123.

Ex. 5. If a man can travel 2440 miles in 4 weeks, how many miles can he travel in 9 weeks?

In 4 weeks the man travels 2440 miles.

., in 1 week 2440 + 4 or 610 miles. ... in 9 weeks 610 × 9 or 5490 miles.

119. Backward process.

In a backward process, beginning from the last number, we change Addition into Subtraction, Subtraction into Addition, Multiplication into Division and Devision into Multiplication.

Ex. What number is that which if I divide by 6, to the quotient add 25, from the sum take 36 and multiply the remainder by 4, the product is 40?

The required number= $(40+4+36-25)\times 6=(46-25)\times 6$ =21 ×6=126.

Examples XXIII.

- What is the average age of 4 men whose ages are 47, 55, 29 and 77 respectively?
- 2. In a school register of daily attendance the numbers for a certain week were—Monday 83, Tuesday 80, Wednesday 75, Thursday 80, Friday 78, Saturday 72. What was the average daily attendance?
- At a competitive examination there were 4 candidates at the age of 19, 3 at 20, 2 at 22 and 3 at 24. Find the average age.
- 4. A man's income for 3 years is Rs.250 a year, for the next 5 years it is Rs.294 and for the next 4 years Rs.309. What is his average income for the 12 years?
- 5. In the month of April, a man slept 7 hours on each of 16 nights, 6 hours on each of 8 nights, 8 hours on each of 5 nights and 10 hours on the last night. How long did he sleep each night on an average during the month?
- 6. Divide 1008 rupees among A, B and C, so that for every 2 rupees A gets, B shall get 3 rupees and C 4.
- Divide 2624 apples among A, B and C, so that for every 5 apples given to A, B may get 11, and C 16.
- 8. The price of a carriage with horse is 1590 rupees, and the price of the carriage is 5 times that of the horse. Find the price of the horse.
- 9. If 23 men earn 1380 rupees in a month, how many men will earn 1980 rupees in the same time?
- 10. A gentleman left 225,000 rupees to be divided amongst his 4 some and 3 daughters in such a way that each son would receive three times as much as each daughter. How much did each son and each daughter receive?
- 11. Divide 33775 rupees among 13 men, 17 women and 30-children, giving each woman 5 times the share of each child, and each man the share of a woman and a child.
- 12. 24 cows are worth 864 rupees, and 45 horses are worth 2835 rupees; how many of such horses ought to be exchanged for 2520 of such cows?
- 18. Divide 2954 rupees among A, B, C and D, so that for every 2 rupees given to A, B shall get 3 rupees, C 4 and D 5.
- 14. A farmer had a horse worth 375 rupees and exchanged it for a yoke of oxen and three cows; the oxen he sold for 125 rupees, two of the cows at 85 rupees each and the other for 76 rupees. How much did he lose by the bargain?

15. Find a number such that if I divide it by 3, and then add 4, then divide the result by 2 and add 3, then multiply the result by 4 and subtract 5, the result of the whole will be 10.

Examples worked out.

Ex. 1. I have to divide 750 rupees among a number of boys and girls, giving 3 rupees to each boy and 2 rupees to each girl; there are as many boys are there?

Here, I boy + I girl receive (3+2) or 5 rupees.

.. 150 x (1 boy + 1 girl) receive 5 x 150 or 750 rupees, for 750 + 5 = 150. ... the number of boys = 150. Ans.

Ex. 2. A man living at the rate of 750 rupees a year for 6 years finds that he is exceeding his income, and reduces his expenditure to 540 rupees a year; at the end of 4 years he finds that he is just out of debt; what is his income?

In 6 years his expenses amount to Rs.750 × 6=Rs.4500. In 4 years... ... Rs.540 × 4=Rs.2160.

in 4 years $R3.540 \times 4 = R3.2100$. in 10 years his income amounts to R3.6660,

"." his debts of the first 6 years are paid off by the savings of the last 4 years,

... his yearly income = Rs.6660 + 10 = Rs.666, Ans.

Ex. 3. Two persons started at the same time from A and B. One left A for B travelling 5 miles an hour, and the other from B for A travelling 7 miles an hour. The distance between A and B is 108 miles. When and where did they meet?

While the first walks 5 miles, the second walks 7 miles, and the distance to be travelled by both before they meet is 108 miles.

Now, 5 + 7 = 12; and 108 + 12 = 9.

. they meet after 0 hours.

Now, 5+7=12; and 108+12=9. they meet after 9 hours. Also, the distance from A where they meet $= 5 \times 9$ or 45 miles.

 $Ex.\ _A$. A man bought 75 cows at 50 rupees each, 94 cows at 43 rupees each and 106 cows at 48 rupees each . at what price per head must he sell the cows, so as to gain 595 rupees by his bargain?

The cost of 75 cows at Rs.50 each = Rs. 75 × 50 = Rs. 3750.

94 cows at Rs.43 ... = Rs. 94 × 43 = Rs. 4042.

... 106 cows at Rs.48 ... = Rs.106 × 48 = Rs. 5088.

... 106 cows at Rs.48 ... = Rs.106 × 48 = Rs. 5088. ... the cost of 275 cows = Rs.12880.

gain = Rs. 595. the selling price of 275 cows gain = Rs. 13475.

: the selling price of a cow=Rs.13475+275=Rs.49.

Ex. 5. If 30 men can build a wall in 12 days, how many men can build it in 18 days?

In 12 days the work can be done by 30 men.

in 12 days the work ... (30×6) or 180 men.
in 18 days ... (180+9) or 20 men. Ans.

Ex. 6. Reduce 7 men, 12 women and 5 children to an equivalent number of children, supposing 2 women equivalent to a man, and 3 children equivalent to a woman.

1 woman = 3 children; : 12 women = 3 x 12 or 36 children.

Again, 1 man=2 women=2 x 3 or 6 children.

.. 7 men=7 ×6 or 42 children.

Hence, 7 men+12 women+5 children=(42+36+5) or 83 children.

Ex. 7. A tank has three pipes attached to it. By two of these while by the third 322 maunds go out in the same time. When all the pipes are opened together the tank becomes full in 320 hours; how many manules of water can the tank hold?

The quantity of water remaining in the tank per hour when all the pipes are opened together = (482+516-322) or 676 maunds.

.. in 320 hours, the water remg.=676 x 320 or 216320 maunds. Hence the tank can hold 216320 maunds of water.

Ex. 2. A man at his death directed in his will that his property should be divided among his four soon as follows:—The eldest to receive Rs.1032 more than the second; the second Rs.1032 less than what the third and fourth together receive; the third and Rs.1032 less than the fourth of the receive; the third and and the share of each son.

Rs.31 less than the fourth. Find the value of his whole property, and the share of each son.

Since the third and the fourth together receive Rs.3251, and the third Rs.31 less than the fourth, therefore the third's share = (3251-31)+2 or Rs.(3220+2) fc. Rs.1610.

Therefore the fourth's share = Rs.(1610+31) or Rs.1641.... second's ... = Rs.(3251-1023) or Rs.2228.... eldest's ... = Rs.(2228+1032) or Rs.3260.

... eldest's ... = Rs.(2228+1032) or Rs.3260Hence, the whole estate = Rs.(1610+1641+2228+3260)= Rs.8739. Ans.

Ex. 9. Prove that the sum of the six numbers that can be formed by different arrangements of the three digits 2, 5 and 7 taken all together can be represented by the expression $2 \times (2+5+7)(\pi^2+10+1)$.

The six numbers that can be formed by different arrangements of the digits 2, 5, 7 are the following:—

In the above numbers, we see that

(1) 2 occurs twice in the hundreds' place, twice in the tens' and twice in the units,' and their sum = $2 \times (200+20+2) = 2 \times 2 \times (100+10+1)$.

(2) 5 occurs twice in the hundreds' place, twice in the tens and twice in the units', and their sum = 2 × (500+50+5) = 2 × 5 × (10²+10+1).

(3) 7 occurs twice in the hundreds' place, twice in the tens' and twice in the units', and their sum=2x(700+70+7)=2x7x(10²+10+1).

Hence the sum of all the six numbers = $2 \times 2 \times (10^2 + 10 + 1) + 2 \times 5 \times (10^2 + 10 + 1) + 2 \times 7 \times (10^2 + 10 + 1)$ = $2 \times (2 + 5 + 7) \times (10^2 + 10 + 1)$

Miscellaneous Examples I.

What number must be added to 7965499 to give 541850036?
 How much is the difference between 628716 and 79019 greater than the sum of 56095, 2800, 10009, 7097, 159, 3000 and 90829?

3. The sum of two numbers is 125678, and their difference is

4. The sum of two numbers is 15678, and the larger number exceeds the smaller by 1234; find the numbers.

5. What number multiplied by 1256 will give the same product as (i) 314 by 476. (ii) 7536 by 378?

6. A man having bought an estate, sold it again for Rs.21128 losing thereby Rs.1878; what did the estate cost him?

7. The population of a certain village is 1254 and one out of 33 dies annually. How many die in a year?

8. The product of two numbers is 2225808, and one of them is 936; what is the other number?

9. The difference of two numbers is 6782, and the greater is 178962; what is the smaller number?

10. What number is that which being divided by 4, the quotient increased by 6, the sum multiplied by 4, the product increased by 16, and the sum divided by 44, the quotient will be 10?

11. What number must be multiplied by 327 to produce 1203033?
12. How much greater is the product of 17 and 15 than the product of their sum and difference?

 Of a town containing 434611 inhabitants, 57569 more are females than males. Find the numbers of males and females.

14. Express 6789 × 1231 as the difference of two square numbers. 15. The divisor is 712, the quotient 31 and the remainder 699. What is the dividend?

16. What least number must be added to 58667, that the sum may be divisible by 2564?

 Subtract the value of the second and fourth digits fro that of the third and fifth digits in the number 123456.

18. The quotient arising from the division of 256329 by a certain

number is 354, and the remainder is 387. Find the divisor.

19. A person, who was born in 1779, died at the age of 46 years;

19. A person, who was born in 1779, died at the age of 40 years; his son died 27 years afterwards, and his daughter died 13 years after his son; in what year did the daughter die?

20. Of what number is 7036 both divisor and quotient?

21. What number is that, which being divided by 24, the quotient increased by 26, the sum diminished by the difference between 40 and 27, the remainder multiplied by 4, and the product divided by 11 will give 12 for a quotient?

22. The quotient being=5 times divisor=7 times remainder=

23. The quotient being 958 and the divisor 607, find the dividend. What would the dividend be, had there been a remainder 44?

24. What least number must be subtracted from 2346, that the remainder may be divisible by 135? By what least number must the same be multiplied that the product may be divisible by 36?

25. A house and its furniture cost Rs.570500; the house is 8 times the furniture. What is the cost of the house?

26. Find the number, which if I multiply by 7, then subtract 31, then divide the result by 3, then add 5, and then multiply by 4, the result is the square of 10.

27. A merchant has three sorts of sugar; the first and second together weigh 12356 maunds; the third 7152 maunds less than the sum of the first and second; also the second weighs 1647 maunds less than the third. Find the quantity of each sort.

28. The product of two numbers is 1270374, and half of one of them is 3129; what is the other number?

29. There were 2244 pears on a tree. The owner gathered 46 daily for 14 days; he divided the remainder between his son and daughter, giving the former 5 for every 3 that he gave the latter; how many pears did the son receive more than the daughter?

30. The Duke of Wellington died in the year 1852, aged 83; Napoleon was born in the same year as the Duke, and died in 1821;

what was Napoleon's age at the time of his death?

31. A speculator gained Rs.5360, and afterwards lost Rs.3479;
he then gained Rs.5283, and then lost first Rs.1089, and then Rs.2361;

32. What least number must be subtracted from $72347+11\times 7$, that the remainder may be divisible by $17\times 9+3\times 6$?

by how much did his gains exceed his losses?

33. A merchant bought 122 maunds of oats at Rs.2 per maund,

and 256 maunds of an inferior sort at Re.1 per maund and mixing the

34. A man dies worth Rs.2427498 to be divided among his three sons. He directed in his will that the eldest and second together shall set Rs.103734, and the second and third together Rs.1105679.

How many does each receive?

35. How many words are there in a book of 347 pages, if there are 13 words in each line, and 40 lines in each page?

36. A water-tub has two pipes attached to it. The first discharges 14 seers and the second 15 seers of water per minute. When the tub is full, both the pipes are opened at once, and the tub becomes empty in 15 minutes. Find the content of the tub.

37. A is 27 years older than B, and 15 years younger than C who is 54 years of age; D is as old as the sum of A's and B's ages.

Is C older or younger than D? how much?

38. A has 74 marbles, B has 34 more than A, and C has 16 more than B: A gives B and C each 19, B gives A and C each 34, and C gives A and B each 10. How many marbles have A, B and C respectively after these exchanges ?

39. A person bought 68 bales of cloth containing 67048 yards; each bale contained 34 pieces, and each piece contained the same

number of yards; find the number of yards in each piece.

40. The nuts in a bag were divided among 59 boys and 27 girls; each boy had 3 times as many as each girl; there were just nuts enough and one over to give the girls 7 nuts apiece. How many nuts did the bag contain?

41. A man's annual income is Rs.7836. His expenditure in January is Rs.632, in February and March Rs.1146, in April, May and June Rs.1638, and in each of the remaining 6 months Rs.595 on an average. How much does he save in the year?

42. A man divided his property worth Rs.12547 among his 4 sons, in such a manner that the eldest received Rs.126 more than the second, the second Rs.131 more than the third, and the third Rs.121 more than the fourth. How much did each receive?

43. Three pipes are attached to a water-tub. By two of these 56 and 24 manulas of water respectively enter into it every hour, while by the third 33 manulas go out in the same time. If the tub can hold 2673 manulas of water, when will it be full, if all the pipes are opened together?

44. Express 19191×1225 as the difference of two square numbers.

45. If 256512 be divided by 105, using its factors 3, 5 and 7, find the true quotient and the true remainder.

46. A gentleman left Rs.123600 to be divided among his two

sons, four daughters and one sister, in such a way that each daughter would receive twice as much as the sister, and each son one-half of wat the three daughters would receive. What did the sister receive?

- 47. A man worth 30 lacs of rupees, having no heirs, divides his whole property among his four faithful servants A, B, C and D. He gives to B twice as much as he gives to A and Rs.1234 more; to C twice as much as A less Rs.2284, and to D Rs.32000. Find his bequest to A.
- 48. A and B walk at the rates of 10 and 13 miles per hour respectively. If they are walking towards each other, and if the distance between them be 207 miles, find when they will meet.
- 49. A says to B and C, I have Rs. 1650; B replies, if I had Rs. 733 more than I have, I should have as much as you have; C adds, if I had Rs. 105 more than I have, I should have as much as both of you. How many more rupees has C than B?
- 50. To what number must 28 be added that the sum being multiplied by 25, the product will be 125625?
- 51. From what number must 302 be subtracted that the remainder being multiplied by 125, the product will be 321000625?
- 52. Divide Rs.40 between A and B in such a way that if A gets Rs.5, B shall get Rs.3.
- Divide Rs. 30 among A, B and C in such a way that if A gets Rs. 1, B shall get Rs. 2 and C Rs. 3.
- 54. If the sum of 250 and 173 be multiplied by their difference, and the product be divided by 33, find the result.
- 55. Add together the six numbers you can form with the three figures 3, 4 and 5, taken all together, and multiply the sum by 597.
- 56. Add together all the numbers that you can form with the four digits 1, 2, 3 and 0 taken all together.
- 57. Arrange the nine digits 1, 2, 3, 4, 5, 6, 7, 8, 9, in three lines with three digits in each line, so that the sum of these digits may, taken in every possible direction, be 15.
- 58. Find the sum of all the numbers that you can form with the digits 1, 5, 7, only two digits being taken at a time.
- 59. By what number must 123456 be divided that if 15328 be added to the quotient and the sum divided again by 8, the quotient will be 7050?
- 60. A, B and C have between them 1467 marbles. B has three times as many as A, and C 131 marbles more than the sum of A and B. Flow many has each?
- Divide Rs. 5000, among A, B, C and D in such a manner, that if A gets Rs.2, B shall get Rs.3, C Rs.4 and D Rs.11.

62. Simplify-

(1) $920+23\times720+(42+7)\times(78+13)+(5\times4)$.

(2) 1250×(72+4)+(20×5)×(64+16)+(111+37).

63. What least number must be added to 3243+3×9 that the sum may be divisible by 15+5×8×7?

64. What number less than 365 added to 730320 will make the number exactly divisible by 365?

65. A man spends Rs. 1485 annually for 6 years and runs into debt. He then reduces his expenses to As. 1100 a year, and in 10 years just manages to clear off his debts. What is his yearly income?

68. Multiply 765389 by 64164, and by 189279, and by 83256, making in each case only three partial multiplications.

67. A volume of a work contains 6 parts of 128 pages each, and there are 46 lines in each page and 58 letters in each line. How many letters are there in 9 volumes 7

68. A man spends Rs.600 a year for 5 years and saves some money; he then raises his expenditure during the next 7 years to Rs.720 a year, and finds all his savings spent. What does he earn each year?

69. The sum of the product of two numbers and 1420 is 349612 : one of the numbers is 864. Find the other number.

70. Find the number which being divided by 24 gives a quotient which if increased by 36 and the sum multiplied by 24 gives a product that will be greater than 876 by 300. 71. If in dividing a number by 336, the operation be performed

by short division by employing the factors 6, 7 and 8 in succession and the several remainders be 1, 2 and 3; find the complete remainder

72. If two men start from the same place and travel in opposite directions, the one at the rate of 42 miles and the other 45 miles a day, how far apart will they be at the end of 12 days? 73. If two men start from the same place and travel in the same

direction, the one at the rate of \$12 miles and the other \$40 miles a week, how far apart will they be at the end of 8 weeks?

74. A dividend is 4637064283, the quotient is 80496 and the remainder is 11707; what is the divisor?

75. If 20 men can do a piece of work in 11 days, how many days will it take 22 men to do it? 76. A, B, C and D have among them Rs.69; A, B and C

have among them Rs.48; B and CRs.31, B having Rs.15 more than C; how many more rupees have A and B than C and D?

77. The product of three numbers is 535500; one of the numbers is 75, another is 68. What is the third?

The product of three numbers is 8937992; the third number is double the second, and the sum of the second and third is 906. Find the first number.

- 79. Divide Rs.3975 among A, B, C and D so that B may have Rs.39 more than A, CRs.45 more than A and B together, and D Rs.20 less than B and C together.
- 80. A grazier bought a certain number of bullocks for Rs.4900, and sold a part of them for Rs. 3840 at Rs. 32 a head, and gained on those he sold Rs. 480. How much did he gain a head, and how many did he buy at first?

CHAPTER III.

Compound Quantities.

120. If one quantity contains another of the same kind an exact number of times, the first is said to be a multiple of the second, and the second a submultiple or aliquot part of the first.

121. We have already seen that in considering quantities of the same kind, we take an abrivary but well-effined quantity of that kind as our units, and shading how many times it is contained in each of them, we express them as whole numbers. But in this way very large quantities will be expressed by very high numbers, which give pin spection little idea of their relative values; to obviate this inconvenience we take such multiples of the unit as will enable us to vaid very high numbers. Thus, of length, we take a yard as our unit, but to measure long lengths we use the mills, a high multiple of quantities and small units for small quantities. Thus, we say that the price of a chair is 8 rupees; that of a book is 14 annas, and that of a pencil is 2 nice.

122. Since it is the custom to use more than one unit for things of the same kind, it would be convenient to select one quantity as the principal or standard unit, and thence derive the various minor or axulliary units, either by dividing this unit into a number of equal parts or by multiplying it a number of times. The standard unit on quantity and its auxiliary units are called its denominations.

123. In the preceding Chapter we have considered only such astroard numbers, or such converte numbers of one denomination as are formed by figures whose local values are always regulated by the same fixed number far; but the rules given can easily be extended to of the figures are connected by more numbers than one; as, for incance, to rupees, Runnes and piles where twelve pies are equivalent to one nana, which is the next higher denomination; sixteen annas to one rupee, which is the next denomination in order; the different numbers 12 and 16 connecting the denominations, in the same minimation of Interest.

Here, the standard unit rupee is divided into 16 equal parts to obtain the auxiliary unit anna, and into 16 x 12 or 192 equal parts to obtain the auxiliary unit pie. Thus, the rupee, anna and pie are the various denominations of money.

124. The processes employed in cases of this nature are Reduction, and the fundamental operations are then called Compound Addition, Compound Subtraction, Compound Multiplication and Compound Division, each of which will be exemplified in order; and the various Tables, which furnish us with all to other leading magnification of the different magnification of the different material and by means of which the above operations are conducted, are given below in order.

TABLE I. MONEY.

British Indian Money.

- 125. 3 Pies (p.) or 2 half-pice make 1 Pice (ps.)
 2 Pice , I Half-anna.
 4 Pice or 12 pies , I Anna (1a.)
 - tó Annas " I Rupee (Re.t or t/.)
 15 Rupees " t Sovereign.
 - 126. Accounts in Bengali are kept by the following Table.
 - 4 Cowries make t Ganda 4 Pans make t Chouk
 - Gandas " I Buri (Paisa) 4 Chouks " I Kahan or 4 Buris " I Pan (Anna) Rupee
- Also t Cowry or Bat=3 Krantis=4 Kags=5 Tals=7 Dwiss=9 Dantis=27 Jabs=80 Tils=320 Ranus=1280 Bahars or Ghuns=
- 25600 Bindus.

 Therefore 1 Courry=1 Kags; 1 Kag=20 Tils; 1 Til=16 Ghuns; 1 Ghun=20 Bindus.
 - Ghun=20 Bindus.

 127. The following Tables are in use in different parts of India.
- IN BEHAR, N.-W. P. AND PUNJAB. IN BOMBAY.
 5 Cowries make 1 Adhi 100 Raes make 1 Quarter
 - 2 Adhis , I Damri 4 Quarters , I Rupee Chhadam , I Adhela IN MADRAS.
 - 2 Adhelas ", I Paisa I. Pagoda=Rs.3. 8a. 2 Paisas ", I Taka In CEYLON. 2 Takas I. Anna. 100 Cents make I Rupee.
- In British India the common medium of exchange is sifteer. The principal coin made of it is called a Rupes. The Rupes excipts I tola or 180 grains, and consists of 11 parts of silver and 1 of alloy. The weight of a gold Mobin: the same as that of a Rupe and is 160 gra. coins are variable, and therefore they are not used in merantile transactions except the Sowerigh, whose value is 15 grapes. The Course

is a shell brought from the Laccadive and Maldive Islands, and is used for very small payments. They vary in value according to supply in market but they are generally reckoned at 80 to a pice.

N. B.—The cowries as shells are now going out of use, but cowries (called karas) are in use in keeping accounts.

Of the copper coins, a half-anna weighs 200 grains; a pice

weighs 100 grains, and a half-pice 50 grains.

15 Sicca Rupees=16 Rupees. The Doctor's Gold Mohur=16

Rupees; the Lawyer's Gold Mohur=17 Rupees.
Gold coins (obsolete): Five rupee piece; Ten-rupee piece; Gold

Mohur; Double Gold Mohur.

Silver coins (current): Two-anna piece: Four-anna piece or

Quarter-rupee; Eight-anna piece or Half-rupee; Rupee.

Copper coins (current): Pie; Half-pice; Pice or Paisa; Double

Note. Re.1=2 half-rupees=4 quarter-rupees or four-anna pieces =8 two-anna pieces, and 1 anna=2 double paisas. Also Re.1=64 pice =102 pies.

English Money.

128. 2 Farthings (q.) make 1 Half-penny (\frac{1}{2}d.)
2 Half-pence ... I Penny (d.)

12 Pence ... 1 Shilling (1s. or 1/.)
20 Shillings ... 1 Pound (£1.)

[1, 2, 3 farthings are usually denoted by \$d., \$d., \$d., ad., respectively.

Money as expressed by means of these denominations is called Sterling money, in order to distinguish it from stocks, shares, &c. The Standard gold coin of Enaland is made of a metal consisting of 22 parts of jour gold, and 2 parts of copper. Each of these 4 parts is called a Carrai. Pure gold is said to be 44 carats fine and admit and a stock of the stock of the standard of the stock of the gold are coined a Soversign, and from 40 points of the Africa-Frances called 22 carat gold, is 54, 174, 104, per ounce.

The standard silver coin consists of 37 parts of pure silver,

and 3 parts of copper. A pound Troy of this metal furnishes 66 shillings, and the Mint-Price of standard silver is 52. 6d, per ounce. The silver coinage is not a legal tender for more than 40s, the gold coinage being the general standard of value.

In the copper coinage, 24 pennies are made from an Avoirdupois pound of copper. This coin is not a legal tender for more than 12d. The coins now current in England are the following:—

Copper coins : Farthing ; Half-penny ; Penny.

Silver coins: Three-penny piece; Four-penny piece; Six-penny piece; Shilling; Florin (2.5, 1); Half-crown (2.5, 6d.); Crown (5.5.).
Gold coins; Half-sovereign; Sovereign.

The following coins were formerly in use, but now they are obsolete. Silver coins: Groat (4d); Tester (6d).

Gold coins: Noble (6s. 8d.); Angel (1os.); Half-Guinea (1os. 6d.). Mark or Merk (13s. 4d.); Guinea (21s.); Carolus (23s.); Jacobus

(255.) : Moidore (275.).

Note. 1 shilling=2 six-pences=3 four-penny pieces=4 threepenny pieces. Also 1 half-crown=5 six-pences; 1 half-guinea=21 six-pences: 1 guinea=42 six-pences.

Also fi=4 crowns=8 half-crowns=10 florins=40 six pences=80

three-pences = 240d = 960q.

T REDITOTION

129. When a quantity is expressed in one denomination only,

it is called a simple quantity ; as 7 rupees ; 5 yards.

When a quantity is expressed in several denominations, it is called a compound quantity; as Rs. 8. 2a. 3b.; 5 yards 2 feet 3 inches.

130. Reduction is the process by which we convert or chance

(1) a simple or a compound quantity into terms of its lower denominations, or (2) a simple quantity into terms of its higher denominations, so that the real or absolute values remain unaltered.

131. To express a quantity in terms of its lower denominations.

(Descending Reduction).

RULE. Multiply the number in the highest denomination by the number of units of the next inferior denomination contained in one unit of the highest, and to the product add the number (if any) of the inferior denomination in the quantity proposed; and repeat this for each succeeding denomination till the required one is obtained.

Ex. 1. Reduce Rs.315 to pice. Re.1 = 16aRs.315 τŔ .. Rs. 315 = (315 × 16)a. = 5040a. Again, Ia. = 4ps. 5040/3. .. 5040a. = (5040 × 4) \$s. = 20160\$s. 20160# .. Rs.315=20160/s. Ex. 2. Reduce Rs.5. 14a. 6p. to pies. Rs. 5. 14a. 6p. $Rs. 5 = 5 \times 16a. = 80a.$. Rs. 5. 14a = 94a. 94a. (5×16+14) Again, $94a = 94 \times 12p = 1128p$. . Rs.5. 14a. 6p. = 94a. 6p. = 1128p. +6p. = II34 Ø. 1134 p. (94 × 12+6) Ex. 3. Reduce £25. 13s. 62d. to farthings. £, 25. 13s. 6 d £1=20s.; .. £25=25 × 20s.=500s. 20 . £25. 13s. = 500s. + 13s. = 513s. Again, 1s.=12d.; .. 513s.=513×12d.=6156d. 5135. .. 513s. 6d.=6156d.+6d.=6162d, 12 6162d. Again, 1d. = 4q.; .. 6162d. = 6162 × 4q.

Here, the denominations are separated by a point as (.): and this is necessary to distinguish them from ordinary numbers, which do not require it, because their local values are all fixed and certain.

Examples XXIV.

Reduce to annas :--

(1) Rs.17 : Rs.19 : Rs.42 ; Rs.45 ; Rs.69 ; Rs.84 ; Rs 95.

(2) Rs.87; Rs.120; Rs.245; Rs.460; Rs.9. 12a.; Rs.20. 14a. (3) Rs. 36. 6a. ; Rs. 53. 13a. ; Rs. 87. 11a. ; Rs. 79. 15a. ; Rs. 234. 11a.

Reduce to bies:—

(1) Rs. 3a : Rs. 56 : Rs. 07 · Rs. 146 : Rs. 342 : Rs. 406.

(2) Rs.84. 5a.; Rs.76. 12a.; Rs.265. 9a.; Rs.804. 13a.; Rs.945. 6a. (3) Rs.15, 8a. 3b.; Rs.7, 13a. 11b.; Rs.8. 0a. 5b.; Rs 9, 10a. 9b.

(4) Rs. 425. 7a. 9p.; Rs 550. 3a. 11p.; Rs. 1250. 5a. 7p.; Rs. 5050. 14a, 16. : Rs. 456, 14a, 11b. : Rs. 31, 10a. 16. : Rs. 343, 8a. 76.

3. Reduce (i) to pice and (ii) to pies :-(1) He. 22 : Re. 10 : Re. 112, 6a : Re. 36, 11a, 26e : Re. 20, 8a, 36e.

(2) Rs.87. 10a. 1ps.; Rs.172. 5a. 3ps.; Rs.225. 9a. 2ps.; Rs.476. 12a. 1ps.; Rs.782. 0a. 3ps.; Rs.13. 10a. 3ps.; Rs.215. 7a. 3ps.

Reduce (i) to gandas and (ii) to couries (karas) :---

(1) Rs.10: Rs.34: Rs.56: Rs.78: Rs.105: Rs.84, 7a.

(2) Rs.102. 15a. 1ps.; Rs.24. 14a. 3ps.; Rs.405. 13a.; Rs.75. 7a. 5 gan. (3) Rs.48. 9a. 10 gan.; Rs.53. 13a. 17 gan.; Rs.9570. 14a. 16 gan.

5. Reduce to couries (karas) :-

Rs.53. 13a. 17 gan. 2 cow.; Rs.68. 9a. 11 gan. 1 cow.; Rs.18. 6a. 12 gan. 2 cow.; Rs. 5942. oa. 17 gan. 3 cow.

Reduce (i) to bice and (ii) to bies: —

(1) 175 half-rupees; 370 quarter-rupees; 845 two-anna pieces.

(2) 425 double-paisas; 3116 two-anna pieces; 2415 half-rupees. (3) 34312 quarter-rupees; 20157 double-paisas; 67950 four-anna pieces ; 827 eight-anna pieces.

7. Reduce (i) to half-rupees; (ii) to quarter-rupees and (iii) to two-anna pieces.

(1) Rs.729; Rs.925; Rs.1228; Rs.1427; Rs.4243; Rs.97403. (2) Rs.858. 8a.; Rs.9726. 8a.; Rs.73246; Rs.57509.

Reduce (i) to half-annas and (ii) to half-trice:

Rs.75. 6a.; Rs.132. 9a.; Rs.150. 0a. 26s.; Rs.3005. 10a. 26s. 9. Reduce :-

(1) A lac of rupees to paisás; Rs.7125. 4a. to four-anna pieces; Rs.6075. 8a. to two-anna pieces; Rs.1250. 7a. 2ps. to doublepaisás; Rs. 9864. 8a. to eight-anna pieces.

(2) Rs.1325. 9a. 1ps. to half-paisas; Rs.3116. 14a. 6p. to doublepaisas ; Rs. 2415. 10a. 9b. to half-bice.

- 10. Reduce to skillings :-
- (1) £345 : £408 : £705 : £1402 : £0086 : £8002.
- (2) £71. 15.; £490. 18s.; £790. 13s.; £3456. 17s.; £6403. 7s.
 11. Reduce to pena:—
- (1) £65; £98; £156; £405; £1849; £5043; £9236.
- (1) £05; £98; £150; £405; £1849; £5043; £9230. (2) £134. 15s. : £198. 13s. ; £416. 11s. ; £526. 5s. ; £926. 7s.
- (3) L2. 6s, 8d; L40. 10s. 6d; L11. 7s 9d; L374. 11s, 8d
- (4) £655. 13s. 6d.; £71. 13s. 5d.; £343. 13s. 5d.; £1274. 19s. 9d.
 12. Reduce to farthings:—
- (1) £4. 8s. 4\$d ; £7. 13s. 11\$d ; £13. 19s. 0\$d. ; £29. 10s. 11d.
- (2) £101 9s. 2²/₃d.; £153. 3s. 4¹/₂d.; £600. 6s. 3d.; £83920. 16s. 2¹/₃d. 13 Reduce (i) to half-pence and (ii) to farthings:—
- (t) 15s. 6d.; 18s. 9d.; 13s. 11d.; 19s. 6d.; 8s. 10d.; 17s. 5d.
- (2) £4080; £8608; £8734; £726. 18s; £517. 13s.; £2125. 6s.
- (3) £79 14s. 8d; £47. 19s 9\d; £389. 12s. 8\d; £879. 18s. 0\d.
- (4) £1560. 10s. 41d.; £2145. 18s. 71d.; £9136. 15s. 91d.
- (5) 3899 half-sovereigns; 4807 crowns; 8608 half-crowns; 6530 florins; 5869 six-pences; 6958 groats; 8009 three-penny pieces; 9076 guineas; 3089 half-guineas; 7632 four-penny pieces; 1445 moidores; 2047 nobles; 3286 florins; 1983 six-pences.
- Reduce (i) to three-penny pieces, (ii) to four-penny pieces, and (iii) to six-pences:—
- (1) £95; £128; £8076; £1857; £9083; £9072.
- (2) £11. 14s.; £144. 17s.; £2145. 11s.; £4265. 15s.; £3264. 17s.
- Reduce:—
 95 guineas 17s. 9³d. to farthings; £450. 16s. 6d. to six-pences.
- £570. 12s. to forins; £382. 7s. 6d. to half-crowns; £589. 15s. to crowns; £3500 17s. 6d. to half-crowns.
 - (3) £00. 0s. 0d. to three-pences; 5573 half-crowns to pence.
 - (4) 9571 half-crowns to six-pences; 9100 half-crowns to three-pences.

 16. Reduce to farthings:—
 - (1) 71 gui. 16s. 2ld.; 937 flor. 1s. 2ld.; 2902 cr. 1s. 3ld.
- 71 gus. 10s. 24a.; 937 ftor. 1s. 24a.; 2902 cr. 1s. 34a.
 150 half-sov. 7s. 24d.; 79924 gui. 12s. 24d.; 7255 ftor. 1s. 34d.
- 17. For how many children can a treat be provided with Rs. 32. Sa. at 2 annas a head?
 - 18. How many two-pice stamps can I buy for Rs. 5. 6a. 2ps.?
- 19. If the cost of a telegram is 3d a word, how many words can be sent for £1. 3s. 3d?
- 20. A poor woman had only Rs.2. 1a. 86 to live upon. She spent daily 4 pies for her food. How many days did she live upon?

132. To express a simple quantity in terms of its higher denominations. (Ascending Reduction.)

RULE. Divide the number by the number of units which make one unit of the next higher denomination, setting down the remainder (if any) as of the same denomination as its dividend; and continue his process till we come to the required denomination.

Ex. r. Reduce 1560ps. to rupees, &-c.

Ex. 2. Reduce 30857p. to rupees, annas, and pies.

Ex. 3. Reduce 97403q. to pounds.

£101 - 9s.

Ex. 4. Reduce 36173 half-pence to guineas.

or { 7 502 - 1 16s. grif. 71 - 51 16s.

Examples XXV

- 1. Reduce to rupees, annas and pies :-
- (1) 25325p.; 57509p.; 51039p.; 679298p.; 37921p.; 456786p.
- (2) 6432946.; 7323946.; 19823456.; 9675736.; 10433246.
 - Reduce to rupees, annas and pies:— 987945ps.; 1234567ps.; 547321ps.; 894956ps.; 5537792ps.
 - 3. Reduce to rupces, annas, & :-
- (1) 8320 gandas; 7680 cowries (karas); 379498 gandas; 40768 buris. (2) 1045673 double-paisás; 2067544 half-paisás; 1077760 cowries
- (karas). (3) 342876 buris ; 596824 paisás ; 23679 double-paisás ; 103678 halfpaisás ; 1155440 cowries (karas).
 - 4. Reduce to rubees :-
- (1) 1648 half-rupees; 1892 quarter-rupees; 2530 two-anna pieces.
- (2) 2896 annas ; 5952 paisás ; 920320 gandas ; 24320 cowries (karas).

5. Peduce to pounds, shillings and pence :-

(1) 69132d.; 60948d.; 90231d.; 2733d.; 89900d.; 157362d.

- (2) 147040q.; 284061q.; 123290q.; 350000q.; 80563979q. (3) 345679q.; 130013q.; 1000019q.; 284079q.; 415739q.; 3650324q.
- Reduce to £. s. d.:—
 899045 half-sovereigns; 971112 crowns; 48073 florins; 886101
- (1) 899045 half-sovereigns; 971112 crowns; 48073 florins; 880101 half-crowns; 85730 half-pence; 13029 three-pences. (2) 15137 four-penny pieces; 82576 florins; 28802 half-crowns; 2857
- (2) 1513/ four-penny pieces; 987653 half-pence; 47285 guineas.
- (3) 23645 moidores; 49726 half-guinens; 183491 six-pences; 281062 three-pences; 40340 farthings.
- 7. How much money will be required to buy 37528 penny stamps?
 8. A dealer bought 438 cocoanuts at 9 pies each: how many

rupees, &c. had he to pay for them?

9. I distributed among 1682 beggars a sum of money, giving

them two pice a head; what sum did 1 spend?

10. If during a festival 2250 people on an average cross the Hugli Bridge daily, each paying 2 pice, what is the collection of the ferry farmer, if the festival lasts for 16 days?

133. There are some cases in Reduction where we cannot pass directly see by step from the given denomination to the one proposed. We must in such cases pass through an intermediate denomination common to both, and it will be advisable to keep division what quantity of the proposed denomination cannot be only the proposed denomination is equivalent to the given quantity.

Ex. 1. Reduce £253. 9s. 10d. to half-crowns.

5069s. t half-crown = 2s. 6d. = 30d. 12 the result is 2027 half-crowns and 28d. 3,0 6083,8d. or 2s. 4d. over.

Ex. 2. Reduce Rs.31. 10a. 2p. to £. s. d., when 1q.=2 pies.
Rs.31. 10a. 2p. 2|6074p. 4|3037q.

:. Rs.31. 10a. 2p.=£3. 3s. 3\d.

134. Proof. Descending and ascending Reductions are inverse processes; if therefore we perform one process on a given

quantity, and on the result the other process, we ought to get the original quantity.

Thus, if by the descending process we find that £25. 13s. 63d. = 246519, we ought by the ascending process to find that 246519 .= £25, 135, 63d.

Examples XXVI.

- Reduce (i) to guineas and (ii) to half-guineas : —
- £63; £105; £96. 16s.; £876. 15s.; £538; £10728. Reduce (i) to crowns and (ii) to half-crowns :-
- £265, 10s. ; £589, 15s. ; £437, 10s. ; £620, 5s. ; £5189, 15s. Reduce to crowns :-
- 10987 guineas; £89000; £36. 17s. 6d; 18756 four-penny pieces.
- 4. Reduce to half-crowns :--£48. 17s. 6d.; £382. 7s. 6d.; £583. 2s. 6d.; 670 half-guineas.
- 5. Reduce to euineas :-
- 28006 florins; 107284 half-crowns; 23810 crowns; 760 halfcrowns; £647. os. 11d.; £375. 16s. ofd.
 - 6. Reduce to half-guineas :-
- 325 crowns: 10867 half-sovereigns; 3150 four-penny pieces; £3240. 10s. 6d. ; 147 half-crowns.
 - 7. Reduce to f. s. d., (1d = 11b.) :-
 - Rs.35. 9a. 3b.; Rs.707. 11a. 7b.; Rs.2510. 8a. 4b.
 - Reduce to Rs. a. p., (1q. = 2 pies) :-
- £32. 145. 7d.; £96. 17s. 6d.; £903. 17s. 6ld.; 54 half-guineas; 107 florins : 17 half-crowns. 9. If a guinea be equal to Rs.10, Sa.; find the number of
- two-anna pieces contained in 1760 guineas. 10. Reduce 7500 Sicca rupees to current rupees and 6432 rupees
- to Sicca rupees.

II. COMPOUND ADDITION.

135. Keeping in mind what was said in Art. 123, we need no additional inquiry to inform us that the fundamental operations on Compound Quantities must be performed as in Integers, with this difference, that instead of carrying and borrowing tens, we must do the same with the different numbers which connect their parts together; and we shall therefore merely enunciate the rule for each at the beginning of the portion of the work appropriated to it.

136. Compound Addition is the method of finding a single quantity which is equal to two or more quantities of the same kind. This single quantity is called the sum of the given quantities.

RULE. Arrange the quantities under one another according to their denominations, so that units of the same denomination may be in the same vertical column, and draw a line below them. Add orgether the numbers of the lowest denomination; reduce the same under the column, and carry the quotient to the first figure of the next column. Repeat the process with all the columns.

Ex. 1. Add together Rs.14. 15a. 10p., Rs.54. 14a. 9p., Rs.156. 11a. 2p., and Rs.34. 14a. 10p.

Rs. a. p. 10p.+9p.+2p.+10p.=31p.=2a.7p.

14 15 10 Carry 2a.; 2a.+15a.+14a.+11a.+14a. 54 14 9 = 56a.=Rs.3. 8a.

156 11 2 Carry Rs.3; Rs.3+Rs.14+Rs.54+Rs.156+Rs.34 = Rs.261 Rs.261 8 7 Ans.

Ex. 2. Add together £156. 8s. 9\(\frac{3}{4}\), £33. 15s. 11\(\frac{3}{4}\), £204. 0s. 1\(\frac{1}{4}\), £5275. 17s. 8d. and £105. 18s. 6\(\frac{1}{4}\)d.

£. s. d.

156 8 9\(\frac{9}{4}\) 3q. +3q. +2q. +2q. = \(10q. = 2\frac{1}{4}\) Carry 2d.; 33 15 11\(\frac{1}{2}\) 2d. +9d. +11d. +1d. +8d. +6d. = \(37d. = 35\), 1d.

204 0 11 Carry 3s.; 3s.+8s.+15s.+17s.+18s.=61s.=£3. 1s. 5275 17 8 Carry £3; £3+£156+£33+£204+£5275+£105 18 64 \$\infty\$ 15776.

£5776 1 11 Ans.

4. A cash-box contained 89 severeigns, 35 half-crowns, 25 florins, 31 shillings and 15 six-penny bits; find the value of the coins in £. s. d.

- 5. A tradesman bought goods to the value of £1368. 12s. 6d.; he paid for carriage, £25. 16s. 9d., and other charges, £2. 15s. 8½d.; he gained by the sale of the goods £269. 15s. 3½d.; how much did he sell the goods for?
- 6. A stationer bought some books for Rs 79. 12a. 6b., some paper for Rs 161. 4a. 3b., some pens for Rs 14. 10a. and some envelopes for Rs 12. 8a. 6b. How much must be charge for all these articles, so as to gain exactly Rs 100 by his bargain?
- 7. A collection was once made in a district for a charitable purpose. The following coins were obtained: 99 gold mohurs, 1875 rupees, 990 eight-anna pieces, 1891 four-anna pieces, 1276 two anna pieces, 90617 half-anna pieces and 81516 piece. What did the collection amount to in Rx. a bies?
- 8. Add together 53 guineas, 107 sovereigns, 161 half-guineas, 55 half-sovereigns, 223 half-crowns, 505 four-penny pieces, and 603 farthings.

III. COMPOUND SUBTRACTION.

137. Compound Subtraction is the method of finding what quantity is left when a smaller quantity is taken from a greater of the same kind. The quantity thus left is called the difference of the given quantities.

RUE. Write the less number below the greater, so that units of the same denomination may be under one another, and draw a line below. Begin at the right hand and subtract (if possible) each number in the lower line from the corresponding one in the upper and place the remainder underneath. But if, in any case, the number in the lower line from the corresponding one in the upper one as many units of the same denomination as make one unit of the upper one as many units of the same denomination as failing care to add to the next higher denomination, and then subtract, taking care to add to the next number in the lower line. Proceed thus through all the columns.

Ex. 1. Subtract Rs.47. 12a. 9p. from Rs.72. 15a. 3p.

Rs. a. p. 3p. is less than 9p., so add 12p., to 3p. and 1a. 72 15 3 to 12a.; 15p. -9p. = 6p. 47 12 9 15a. -13a=2a. and Rs. 72-Rs. 47=Rs. 25.

Rs.25 2 6

Ex. 2. Subtract £207. 13s. 84d. from £304. 2s. 10ld.

£. s. d. 2q. is less than 3q.; so add 4q. to 2q. and 1d. to 8d.; 304 2 10; 6q.-3q.=3q. or 2d.

207 13 $8\frac{1}{2}$ 10d. -9d. = 1d. £ 96 9 $1\frac{2}{3}$ 2s. is less than 13s, so add 2os. to 2s. and £1 to

2s. is less than 13s., so add 2os. to 2s. and £1 to £207; 22s. -13s = 9s.; £304 -£208 = £96.

- 3. Subtract :-
- Rs.979. 15a. 9p. from Rs.5707. 15a. 7p.
- (2) Rs. 2102. 13a. 11b. from Rs. 4365. 10a. 9b.
- (3) Rs.6779. 142. 8p. from Rs.7865. 12a. 6p.
- (4) £554. 12s. 71d. from £1739. 7s. 61d.
- (5) £1975. 13s. 9\d. from £3003. 10s. 4d.
- (6) Rs,55734-12a. 4p. from Rs.88659. 8a. 3p.
- Ks. 55734. 12a. 4p. from Ks. 88059. 8a. 3p.
 The sum of Rs. 14. 3a. 5p. and Rs. 9. 8x. 7p from Rs. 53. 11a. 6p.
- (8) The sum of £5. 6s. 4\frac{1}{2}d. £31. 15s. 10\frac{1}{2}d., £43. 18s. 5\frac{1}{2}d., and £25. 16s. 4\frac{1}{2}d. from £371. 14s. 6\frac{1}{2}d.
 - 4. What must be added to £157. 16s. 9\d. to make £355.
- 5. After spending Rs.237. 14a. 3fs., how much has a man left out of Rs.532. 10a. ?
- 6. A man has 50 guineas in his purse; what would he have left after paying bills amounting to f.40. 8s. 114d. 9
- A tradesman, in making out a bill, copied 16s. 3d. for £16.
 and £10. 8s. for 10s. 8d. By what amount was the bill wrong?
- 8. By how much is R₁s₂O₃. II.a. 3β. greater than R₁.21₃. 8a. 4ρ? 9.
 9. A borrowed from B R₁.287, 5a. 8β. and then R₁.29, 9a. 1β.; repaid him R₁.28, 7a. and again borrowed R₁s₂O₃, 13a. 11β.; find what will be the amount of his debt still due if he makes payment of R₁s₂O₃ a. 7β.
- Find the value of Rs.20. 15a. 11p.+Rs.28 11a. 3p.-Rs.17. 12a. 5p.+Rs.59. 13a. 6p.-Rs. 13. 10a. 4p.+Rs.18. 3a. 7p. -Rs.28. 12a. 6p.-Rs.10. 14a. 3p.
- 11. A man has Rs.5000 in the bank; he draws Rs.2500 on Monday, Rs.1175. 42 on Wednesday, and Rs.959. 6a. on Saturday. What has he left in the bank?
- 12. A boy took the sum of 19s. 11¼d. three times out of a bag containing £5. What was left?
- 13. A house and furniture are worth Rs. 1001. 11a. 10p. The house costs Rs 750 14a. 11p What is the value of the furniture?
- 14 A, B and C together owe £107. 11s. 8d; the sum of the debts of A and B is £70. 5s. 5d, and of B and C £80. 16s. 1d. How much does each owe?
 - 15 A, who has Rt.5. 4a, gives B Rt.3. 7a. 6p. and C Rt.2. 9a; but he receives from D Rt.10. 10a. 8p, and from E Rt.3. 11a. 6p less than he received from D; how much has he after these payments?
 - A tradesman's cash in hand on Monday morning was £5.
 6d. His cash receipts on Monday amounted to £2. 15s. 6ld.

and on the following days of the week were, respectively, £4. 185. 4d, £3. 135. $6\frac{1}{3}d$, £5. 105. $10\frac{1}{3}d$, £4. 121. 11d, and £16. 97. $8\frac{1}{3}d$. His cash outlay during the week amounted to £24. 175. $5\frac{1}{3}d$. What cash had he remaining at the end of the week?

IV. COMPOUND MULTIPLICATION.

138. Compound Multiplication is the method by which we find the sum of a compound quantity repeated as many times as there are units in a given number. The sum found is called the product.

139. When the Multiplier is not greater than 20.

RILL Place the Multiplier under the lowest denomination of the unlipfilicand and draw a line below. Beginning with the lowest danonination multiply by the given multiplier, and fad the number of the next higher denomination contained in the product; put down the renainder (if any), and carry the quotient to the next product, and repeat the process till all the denominations are multiplied.

Ex. 1. Multiply Rs.72. 11a. 9p. by 7.

Rs. a. p. 9p.x7=63p.=5a.3p.; curry 5a. 72.119 9p.x7=63p.=5a.3p.; curry 5a. 16x.x7=77a., with 5a.=82a.= Rs.5 509 2.3 Rs.5 2a.; curry Rs.5. Rs.509. *** Rs.5 2a.; curry Rs.5 - Rs.509.

Ex. 2. Multiply £9. 19s. 74d. by 17.

 $f_{169} \xrightarrow{13} \xrightarrow{11\frac{3}{4}} \begin{array}{c} 13e.; carry £16. \\ £9 \times 17 = £153; £153 + £16 = £169. \end{array}$

140. When the Multiplier is a number greater than 20, and can resolved into two or more factors none of which is greater than 20, multiply by each of the factors in succession, and the last result will be the product required. (Art. 81.)

Ex. Multiply Rs.99. 13a. 9p. by 28 and £9. 19s. 73d. by 42.

141. When the multiplier exceeds or falls short of a product by a small number, multiply by such product and then by this number and add or subtract for the required product.

Ex. Multiply Rs.240. 7a. 10p. by 29, and £17. 8s. $5\frac{1}{4}d$. by 139. $29 = 28 + 1 = 4 \times 7 + 1$. $139 = 144 - 5 = 12 \times 12 - 5$.

142. When the Multiplier is a very large number.

RULE. Multiply by 10 as many times in succession as there are figures in the multiplier less 1; then multiplier legiven quantity by the units' figure of the multiplier, the first product by the tens' figure, the second product by the hundreds' figure and so on. The sum of these partial products will give the required product.

Ex. Multiply
$$\xi_1^{c}$$
, i.z. $0 \neq d$, by 7249 , ξ_2^{c} , ξ_3^{c} , ξ_4^{c} , ξ_5^{c} , $\xi_5^$

143. When the multiplier is a large number, as in the above example, and we are told to proceed by Compound Multiplication, the following is the simplest method.

144. In compound multiplication we may reduce the multiplicand to the lowest denomination contained in it, then multiply this result by the multiplier, and then reduce the product back again. This method is generally tedious.

Ex. Multiply £5045. 6s. 21d. by 4342. £5045. 6s. $2\frac{1}{4}d = 48434979$.

and 48434979. x 4342=210304639749. and 21030463974q. = £21906733 6s. 13d. Ans.

Examples XXIX.

Multiply :---

- (1) Rs.18. 8a. 4p. by 2; Rs.42. 10a. 6p. by 3; Rs.67. 11a. 6p. by 8. (2) Rs.51. 11a. 7p. by 4; Rs.67. 13a. 9p. by 7; Rs.58. 2a. 7p. by 6.
- (3) Rs.65, 12a, 8p. by 5; Rs.84, 11a, 5p. by 11.
- (4) Rs.48. 14a. 10p. by 9; Rs.66. 3a 4p. by 18. (5) £19. 18s. 74d. by 8; £3. 9s. 74d. by 12; £87, 8s. 114d by 10. (6) £37. 19s. 94d. by 9; £374. 12s. 104d. by 7.
- (7) £549. 13s. 74d. by 11; £49. 13s. o4d. by 19.
- (8) £497. 19s. 74d. separately by 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 and 12.
- ... 2, 3, 4, 5 6, 7, 8, 9, 10, 11 and 12. (9) Rs.666, 10a. 9p. (10) £6, 12s, 5d. (11) Rs.104, 12a, 5\$. 13, 14, 16, 18, and 20.
- ... 13, 14, 15, 17, 19 and 20. (12) £86. 10s. 78d. ... 15, 16, 17, 18 and 19.
- Multiply (by factors):—
- (1) Rs. 194. 8a. 7b. by 24; Rs. 320. 14a. 10b. by 21. (2) Rs. 586. 13a 10p. by 64; Rs. 142. oa. 9p. by 132,
- (3) Rs. 1005. 12a. 3h. by 72; Rs. 133. 6a. 6h by 75.
- (4) Rs.205. 4a. 3p. by 108 : Rs.140. 2a. 6p. by 144.
- (5) Rs.245. 15a. 5p. by 198; Rs 8967. 8a 6p. by 351. (6) £98. 18s. 3d by 96; £68. 7s. 4\frac{3}{4}d by 35; £13. 7s. 4\frac{3}{4}d by 275. (7) £94. Os. 74d. by 77; £4. 8s. 91d. by 121; £13. 15s. 61d. by 132.
- (8) Rs. 277. 5a. 2p. by 216; Rs. 1230. 10a. 1p. by 224.
- 3. Multiply (by factors and parts) :-Rs.77. 2a. 4p. by 23; Rs.13. 15a. 4p. by 62; £9.19s. 72d. by 31.
- (2) Rs. 3. 15a. 10p. separately by 67, 71 and 79.
- (3) Rs.398. 15a. 2p. ... 69, 59 and 41. (4) £130. 18s. 9\d. ... 89, 93 and 113.
- (5) £808. 12s. 7 d. 79, 83 and 131.
- (6) Rs.10. 11a. 6p. 379 and 845. (7) Rs.8 14a. 2p. 1234 and 5678.
- (8) Rs. 37. 15a. 6b. ... 9803 and 5840. ... (9) £5045. 6s. 2.€d. ... 923, 956 and 2765. ...
- 4. Multiply :-
- £324. 12s. 6½d. by 394; £2. 16s. 9½d. by 702.

- (2) Rs.10, 4a, 6b, by 3210; Rs.23, 6a, 2b, by 3684.
- (3) £9. 15s. 10 d. by 4508; £3. 18s. 11 d. by 57089. (4) Rs.42. 44. 46. separately by 3005 and 7082. ... 8736 and 98736.

(5) £567. 13s. 8¼d.

5. Find the values of :each. (2) 156 things at 11a. 6p. each. (1) to things at 3a 2b. 15a. 8p. ... (3) 96 ••• 9a. 5p. (4) 315 ... 16s. 10ld. (6) 728 ... 7s. 73d. ... (5) 428

(7) 943 Rs.4. 2a. (8) 625 ... £1, 135. 6d.... ... (9) 729 ... Rs.7. 5a. 3p. ... (10) 829 Rs. 8.11a. 5p,... (11) 1502 ... 19s. 5 d. ... (12) 2014 17s. 6d.

6. Make out the following bills :-

(I) 17 yards of calico at 6a. 6p. per yard; 143 yards of long cloth at 12a, 10b, per yard: 14 yards of merino at Rs.2, 3a, 6b. per yard; 204 yards of flannel at 14a. 9p. per yard; 456 yards of linen at Re.1. 12a. per yard; and 755 yards of silk at Rs.3. 5a. 4b. per vard.

(2) 40 seers of Assam Tea at Rs.3. 3a. 4p. per seer; 65 lbs. of China Tea at Rs.2. 5a. 4p. per lb ; 35 seers of coffee at Re.1. 12a. 4p. per seer; 145 seers of sugar at 7a. 4p. per seer; and

122 seers of best sugar at 104. 4\$, per seer.

(3) 23 yards of silk at 5s. 44d. per yard; 5 yards of velvet at 13s. 6d, per yard; 8 yards of velveteen at 3s. 111d per yard; 13 yards of linen at 3s. 2d. yer yard; 19 yards of flannel at 1s. Qd. per vard: and 26 yards of calico at 11 d. per vard.

A man distributed a certain sum of money to 79 poor persons and gave £17. 125. 91d to each; find the sum of money distributed. 8. A bankrupt's estate can pay 14a, 1016, in the rupee, what will a creditor receive who has lent 3125 rupees, and how much will

he lose? 9. How much money must be added to £1000 that each of

33 people may receive £35. 3s. 4d.? A gowala exchanges 50 calves each worth Rs.15, 10a, for 37 cows each worth Rs.26. 4a.; ought he to receive, or to pay any

money ? how much? If I spend £2. 7s. 11d. a day, how much is that in a year of 365 days?

12. There are 53 chests of drawers; in each chest there are 4 drawers : in each drawer there are 10 compartments; and in each compartment there are deposited £32. 5s. 6d. How much money is deposited in the chests?

V. COMPOUND DIVISION.

145. Compound Division is the method by which (1) we break up a compound quantity into as many equal parts as there are

units in a given number, and thus find the value of one of these parts, (2) we find how many times one compound quantity is contained in another of the same kind. The first method is called Partition and the second Quotition.

146. In the first case the divisor is an abstract number, and the quotient telling the value of each part is a compound quantity of the same kind as the dividend. In the second case the divisor is a compound quantity of the same kind as the dividend, and the quotient telling how many times is an abstract number.

147. When the divisor is an abstract number.

RULE Place the dividend and divisor as in Simple Division. Find how often the divisor is contained in the highest denomination of the dividend, put down the quotient, and reduce the remainder (if any), to the naxt inferior denomination. Add to it the number of that denomination in the dividend, and repeat the division. Continue the process step by step through all the denominations.

(1) When the divisor does not exceed 20, the division can be performed mentally thus:—

Ex. Divide Rs.436. 5a. 4 p. by 11.

(2) When the divisor is a number larger than 20.

Proceed as in the following Examples.

Ex. Divide £52. 10s. 74d. by 41, and Rs.3441. 5a. 96. by 129.

.. the required quotient is £1. 5s. 71d.

148. When the divisor is the product of two or more factors, divide by each of them successively, and five the remainder as in Simple Division.

149. When there is a remainder after division, we can always find a quotient which is correct to the nearest pie or farthing by the following Rule.

RULE. Neglect the remainder, if it is less than the divisor divided by 2; but otherwise add 16. or 19. to the quotient.

Ex. Find to the nearest pic the result of dividing Rs.727. 15a. 100. by 67, and to the nearest farthing £333. 19s. 44d. by 29.

Rs.10. 13a. 10p. 16 £11. 10s. 4d.

150. When the divisor is 10, 100, 1000, &.c.

RULE. Cut off from the right of each succeeding dividend as many figures as there are ciphers in the divisor ; the figures to the left will at each step give the quotient and the figures to the right the remainder.

Ex. Divide R:1179, 2a. 8h, by 100, and £9797, 5a. 6d. by 900. (1) R:a. a. b. (2) $\frac{5}{5}$, 5. d. $\frac{5}{5}$, 5. d. $\frac{5}{5}$, 5. d. $\frac{5}{5}$, 6. $\frac{1}{5}$, 100 $\frac{1}{5}$, 10

q.2,42 or os. ... Quotient = f_1 10. 17s. 81d. and 8s. over.

1. Divide :-- Examples XXX.

- (1) Rs. 11. 13a. 8p. by 2; Rs. 393, 14a, 4p. by 7; Rs. 328, 15a. 4p. by 5.
- (2) Rs. 5161. 9a. 4p. by 3; Rs. 440. 5a. 6p. by 9; Rs. 436. 5a. 4p. by 11.
- (3) Rs. 5392. 1a. 4p. by 8; Rs. 576. 8a. by 12; Rs. 1721. 7a. 10p. by 14.
- (4) £26. 15s. 3\d. by 2; £87. 16s. 8\d. by 9; £614. 2s. 6\d. by 7.
- (5) £79. 135. 9d. by 12; £147. 115. 63d. by 15; £95. 25. 38d. by 11.
- (6) £241. 8s. 8fd. by 63; £1990. 10s. 9d. by 42; £75. 1s. 10fd. by 45.
- (7) Rs. 8370. 15a separately by 17, 51 and 126.
- (8) Rs.12342. 12a. 2p. ... 19, 59 and 325.
- (9) Rs.3253. 15a. ... 23, 87 and 712.
- (10) £1302. 18s. by 144; £890. 12s. 6d. by 125.
- (11) £75. 6s. 41d. by 103; £4718. 14s. 8d. by 132.
- (12) £7549. 17s. 6d. by 859; £77573. 18s. 9\d. by 4578.
 - 2. Divide by the short method :-
 - (1) £239. 14s. $4\frac{1}{3}d$ separately by 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 and 12.
 - (2) Rs. 1088. 12a. separately by 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 and 12.
 - (3) Rs. 1877. 7a. 4p. by 14; Rs. 2757. 9a. by 18; Rs. 7023. 2a. by 20.
 - (4) £623. 5s. 41d by 13; £318. 10s. 7d by 14; £139. 13s. 8d by 16.

 3. Divide by using factors:—
 - (1) Rs.517. 11a. 4p. by 35; Rs.34. 11a. by 45; Rs.3868. 3a. 6p. by 99.
 - (2) Rs. 3639. 1a. 6p. by 81; Rs. 3191. 6a. by 132; Rs. 5761. 8a. by 144.
 - (3) £579. 181. by 45; £1328. 133. 6d. by 56; £453. 113. 6\frac{1}{2}d. by 77. (4) £374. 103. 3d. by 108; £576. 3s. by 144; £386. 16s. 5\frac{1}{2}d. by 99.
 - 4. Divide:—
 (1) Rs.2625, 1a, 8p, by 10.
- (2) £176. 16s. 8d. by 10.
- (3) Rs. 3305, 13a, 4b, by 100.
- (4) £73. 12s. 11d. by 100.

- (5) £876. 2s. 11d. by 100. (6) Rs.1151. 9a. 2p. by 1000 (7) £9658. 17s. 3\d by 1000. (8) Rs.4579. 2a. 8p. by 400. (9) Rs.6025 by 800; Rs.3625 by 6000; Rs.11575 by 2400.
- (10) £1556. 5s. by 3600; £513. 8s. 9d. by 3100; £2559. 7s. 6d. by 18900.

 5. Divide:—
 - (1) Rs.73298. 3a. 8p. separately by 842, 912 and 8317.
 - (2) Rs.84566. 2a. 8p. 392, 573 and 7856.
 - (3) Rs. 56789, 15a 8p, by 9357. (4) Rs. 98767. 5a, 2p, by 10048. (5) £6011656. 5s. 8\d. by 2331. (6) £467325. 10s. 1\d. by 2803.
 - (7) £530866. 17s. 6d. by 2772. (8) £4420895. os. 3\frac{3}{4}d. by 3001.
 - Find, to the nearest pie or farthing, the result of dividing :—
 Rs.33. 9a. 4p. by 9.
 Rs.2684. 2a. 9p. by 241.
 - (1) Rs.33. 9a. 4p. by 9. (0) Rs.2004. 2a. 9p. by 241. (2) Rs.511. 8a. 5p. by 97. (7) Rs.523. 6a. 8p. by 100.
 - (3) Rs.29. 10a. 3p. by 31. (8) £1867. 16s. 8\$a by 407. (4) £180, 4s. 9a by 12. (9) £15104. 10s. 2a by 100.
 - (5) £74. 6s. 104d by 23. (10) £2160. 18s. 11d. by 1000.
- 7. If Rs.2757. 9a. be equally divided among 18 people; how much will each receive?

 8. A man spends Rs.5611. 14a. in a year of 365 days: how
- much does he spend in a week of 7 days?

 9. After buying 15 books 1 have £2. 155. 7½d. left out of £7.
- After buying 15 books 1 have £2. 15s. 7½d. left out of £7. What was the price of each book?
 The cost of 720 goats is Rs.712. 8a.; what is the cost of
- each goat?

 11. 205 sovereigns, all equally light, are worth £201, 155, 1114.:
- find the worth of each.

 12. A cattle-dealer bought 11 cows at Rs.8. 4a. each; after spending Rs.26. 4a. in feeding them, he sells 3 of them for Rs.11. 4a. each; at what price must he sell each of the others to gain Rs.23 by the bargain?
- 151. When the divisor is a compound quantity of the same kind as the dividend.

 Bull. Reduce the dividend and the divisor to the same
- RULE. Reduce the dividend and the divisor to the same denomination, and then proceed as in Simple Division.
 - Ex. 1. Divide Rs.113, 14a, 6p. by Rs.12, 10a, 6p.
 Rs.113, 14a, 6p.=21870p.; Rs.12, 10a, 6p.=2430p.
 - ., the quotient required=21870+2430=9. Ans.
 - Ex. 2. How many cricket balls each worth 5s. $7\frac{1}{2}d$. can I buy with £134. 14s. $4\frac{1}{2}d$. 2
 £134. 14s. $4\frac{1}{2}d$. 2
 £136. 14s. $4\frac{1}{2}d$. = 1293309.; 5s. $7\frac{1}{2}d$. = 2709.
 - 134. 143. 48d = 1293309; 53. 78d = 2709. ... the number of balls = $129330 \div 270 = 479$. Ans.
 - .. the number of bans=129330+270=479. And

MEASURES OF WEIGHT.

Examples XXXI.

- 1. Divide :-
- (1) Rs.175, 9a. 4p. by Re.1. 12a. 8p.; Rs.854. 2a. 84. by Rs.20. 13a. 4p.
- (2) Rs.438. 7a. by Rs.6. 5a. 8p. ; Rs.4012. 2a. by Rs.25. vi1a 6p. ...
- (3) £28 2s. 6d. by 12s. 6d. : £150. 7s. 5d. by 6s. 3dd.
- (4) £286. 3s. 2d. by £1. 11s. 14d.; £144. 13s. 114d by 9s. 114d.
- (5) Rs. 22831. 1a. 6p. by Rs. 66. 2a. 10p.; £4808. 14s. by £7. 8s. 5d.
- (6) Rs. 200157. 8a. 10p. by Rs. 576. 13a. 2p.; £131. 4s. 4½d. by 10s. 7½d. 2. How often is
- (1) Rs.760. 6a. 8p. contained in Rs.6843. 12a. ?
- (2) Rs.3. 12a. 10p. ... Rs.2771. 112. 6p. ?
- (3) Rs 2. 15a. 4p. ... Rs.2366. 10a. 8p. ?
- (4) £35, 165, 7\$\frac{1}{2}d. ... £9961, 75, 6\frac{1}{2}d. ?
 (5) £2579, 05, 0\frac{3}{2}d. ... £399745, 95, 8\frac{1}{2}d. ?
 - 3. Find the quotient and the remainder in the division of :--
- Find the quotient and the remainder in the division of: Rs.0607. 15a. 10p. by Rs.26. 5a. 2p.
- (2) Rs.1225. 11a, qp. by Rs.55, 10a, 8p.
- (2) As. 1225. 11a. 9p. by As. 55. 10a. 8 (3) £568. 13s. 8d. by £1. 8s. 6d.
- (4) £339 14s. 71d by £4. 11s. 91d.
- How many dollars worth 4s. 1½d. each must be given in exchange for £235. 10s. 9d.?
- 5. To how many persons may Rs.607. 12a be distributed giving Rs.46. 12a to each γ
- How many hats each costing £1. 2s. 3½d. can be bought for £134. 17s. 3½d.?
 How many cows at Rs. 108. 12d. each can I buy with the
- 7. How many cows at Rs. 108, 12a, each can' I buy with the proceeds of selling 87 horses at Rs. 1151, 4a, each?
- How many days must a labourer work at 2s. 1½d. a day to earn £51?
 I buy a number of books at 2s. 9λd. each and sell them
- y. I buy a number of books at 2s. 9½d. each and sell them at 3s. 3d each. If I thereby make a profit of £2. 4s., how many books must I buy?
- 10. I buy 60 gallons of wine at £1. 3s. 6d. a gallon and £1. 10s. is gained by selling it at £1. 2s. 6d. a gallon. How much water is added?

	58	7	6	2	12	8	2	1	12	49	10	6	_2

Multiply :—

(t) 32 tolas 6 m. 8 r. 3 dh. separately by 132 and 143.

(2) 45 fbs. 7 oz. 3 drs. 2 scrs. 8 grs. 16 and 64. (3) 7 fbs. 6 3 14 grs. ... 53, 71 and 2500.

8. Divide :-

(1) 65 tolas 7 m. 6 r. 2 dh. separately by 72 and 81.

(2) 120 lbs. 9 0z. 5 drs. 2 scrs. 12 grs. ... 120 and 132.

(3) 270 fbs. 5 \$ 6 \$ 2 scrs. ... 46, 53 and 1000. (4) 7 fbs. by 2 \$ 2 9 and 1234 fbs. 68 9 by 44 fbs. 23 9.

9. How many pills, each containing 6 9 2 grs. can be made out of 2 ibs. 117 63 of rhubarb?

154. To convert from one system of weights into another.

(1) To convert Indian weight into Troy, multiply the weight in tolas by 3 and divide by 8; the result will be the weight in oz. Troy. Or multiply the weight in tolas by 180; the result will be the weight in grains Troy.

Conversely, to convert Troy weight into Indian weight, multiply the weight in or. Troy by 8 and divide by 3; the result will be the weight in tolas. Or divide the weight in grs. Troy by 180; the result will be the weight in tolas.

(2) To convert Indian weight into Avoir, multiply the weight in chantaks by and divide by 70; the result will be the weight in Bs. Avoir. Or multiply the weight in seers by 72 and divide by 5; the result will be the weight in flax Avoir. Or multiply the weight in manufab by 36 and divide by 49; the result will be the weight in cutz. Avoir.

Conversely, to convert Avoir, weight into Indian weight, multiply the weight in Bs. Avoir. by 9, and divide by 9; the result will be the weight in the Avoir. by 35 and divide by 72: the result will be the weight in Bs. Avoir. by 35 and divide by 72: the result will be the weight in acres. Or multiply the weight in cwts. by 49 and divide by 36; the result will be the weight in mannds.

(3) To convert Bs. Avoir, into Troy, multiply the weight in Bs. Avoir, by 7000; the result will be the weight in grains Troy. Conversely to convert Troy weight into Avoir, multiply the weight in Bs. Troy by 144 and divide by 175; the result will be the weight in Bs. Avoir.

(4) As the weight in grains of both Apoth and Troy weights is

the same, therefore the one may be taken for the other.

Ex. 1. Convert 9 cwt. 3 qrs. 6 lbs. into Indian weight, 9 cwt. 3 qrs. 6 lbs. = 1098 lbs. = 1098 × 70 + 9 ch. = 8540 ch. = 13 mds. 12 sr. 12 ch. Ans.

= 13 mds. 13 sr. 12 ch. Ans. Ex. 2. Convert 6 mds. 26 sr. 14 ch. into cost, cta. (Avoir.)

6 mds. 26 sr. 14 ch. = 4270 × 0. + 270 × 0. + 70 lbs. (Avoir.) = 549 lbs. = 4 cwt. 3 grs. 17 lbs. Ans.

Ex. 3. Reduce 1 cwt. 2 lbs. (Avoir.) to Troy weight.

1 cwt. 2 lbs. -114 bs -114. ×7000 grs. Troy -798000 grs.
-138 lbs. 6 oz. 10 dwts. Ans.

Examples XXXIII.

Reduce to tolas :—

1440 grs. ; 7 lbs 7 oz. 17 dwts. 12 grs. ; 16 lbs. 6 oz. ; 2 oz. 5 dwts.

Reduce to grains (Troy):—
 16 sr. 8 ch.; 25 sr. 14 ch. 3 tolas; 1 md. 5 sr. 14 ch.; 4 vis

15 palams 2 tolas.

(2) 8 tons 8 cwt. 98 lbs. 3045 grs.; 425 tons 19 cwt. 100 lbs. 15 02. 200 grs.; 1 cwt. 1 qr. 25 lbs.

3. Reduce 20 ths. Avoir to Troy weight; 16 dwts. to Apoth. weight; 5 drs. Apoth. to Troy weight; 525 ths. Troy to mds., sr., &-c. 4. Reduce 96 tolas to oz. Troy: 37400157 grains Troy to

(Madras) mds., vis, &-c.; 309432159 fbs. Avoir., to mds., sr., &-c.

5. Reduce to maunds, sr., &-c. :-

14 cwt. 1 qr. 24 fbs.; 10 cwt. 3 qrs. 20 fbs.; 3 tons 12 cwt. 1 qr. 8 fbs.; 3 tons 19 cwt. 8 fbs.; 4 cwt. 3 qrs. 8 fbs.

6. Reduce to tons, out., &c.:-

7 mds. ; 15 mds. 38 sr. 12 ch. ; 9 mds. 7 sr. 8 ch. ; 10 mds. 20 sr.; 53 mds. 15 sr. ; 21 mds. 35 sr.

7. Reduce 1137 lbs. 6 oz. Troy to lbs. Avoir; 2 cwt. 3 qrs. 17 lbs. and 5 cwt. 18 lbs. 14 oz. to Troy weight.

8. Convert 6 tons 10 cwt. 65 lbs. into Madras maunds; 8 tons 2 cwt 9 lbs. into Bombay maunds; 368 Bombay maunds and 140 Madras maunds into tons. cwt. 62c.

9. How many 2 fbs. packets of tea can be made from a chest weighing 7 cwt 3 qrs. 16 fbs. ?

10. Each ton of ore obtained from a gold mine yields on an average 2 oz. 1 dwt. 15 grs. of fine gold. How much fine gold will be obtained from 203 tons?

11. How many coins each weighing t oz. 8 dwt. can be made

of 770 lbs. of metal?

12. A truck is loaded with 120 sacks; each sack weighs 7 sr. to ch., and contains 84 seers of grain. What is the weight of the whole in maunds and seers?

13. How many pounds Avoir, are equal to 175 lbs. Troy?

14. Multiply 88 ka. 12 mds. 16 sr. (Bombay) separately by 99 6and 144; and 4 ka. 5 mds. 15 sr. by 3268.

15. A train consists of 20 trucks of equal weight; 9 of them

weigh 53 tons 1 cwt. 1 qr. 3 lbs. What do the rest of them weigh?

16. Convert 2 qrs. 16 lbs. into seers, 10 cwt. 1 qr. 13 lbs. into maunds, and 15 lbs. 2 oz. 5 dwts. 20 grs. into lbs. Avoir.

 Express 576 lbs. Avoir. as lbs. Troy, 58 lbs. 4 oz. Troy aslbs. Avoir., and 16 dwts. 16 grs. in Apoth-weight.

18. Reduce 9720 grs. Troy to tolas and find how many lbs. are there in 12288 tolas?

19. How many times is a weight of 6 tons 7 cwt. 27 bs. 5 oz. contained in 159 tons 1 cwt. 10 bs. 13 oz.?

29. What is the whole weight of 217 waggon loads, each containing 3 tons 13 cwt. 3 qrs. 13 lbs.?

21. 797 tons 19 cwt. 2 qrs. 14 lbs. is divided among a certain number of people, so that each receives 5 tons 3 cwt. 2 qrs. 15 lbs. How many of them were there?

22. 84 poor men have distributed equally among them 252 mds. 10 sr. 12 ch. of rice; what share will each receive?

23. If 5 ka. 15 mds. 30 sr. of a certain article can be bought for a rupee, what quantity can be bought for 2384 rupees?

24. 21 tons 3 cwt. 1 qr. 17 fbs. 5 oz. 8 drs. of rice are to be packed in bags of equal size. How many bags will be required if each hold 24 fbs. 6 oz. 8 drs. 7

25. Reduce 2457600 dhans to maunds.

Divide :--

(1) 6 mds. 6 sr. 27 ta. (Bombay) by 73.

(2) 311 ka. 10 mds. 36 sr. 4 palams (Madras) by 503.

28. Divide 64 ka. 7 mds. 12 sr. by 15 mds. 13 sr. (Madras).

29. Divide 160 ka. 10 mds. 39 sr. by 15 mds. 3 sr. (Bombay).

30. If standard gold contained 12 parts of pure gold to 1 part of copper, and 247 oz. Troy were coined into 960 sovereigns; wha would be the weight of pure sold in a sovereign?

 How many bars of gold each weighing 5 oz. 13 dwts. 21 grs. can be made out of a bar weighing 88 fbs. 8 oz. 14 dwts. 15 grs.?

32. Find the weight of 73 iron bars, each weighing 17 cwt.

2 qrs. 19 ths. 5 oz.

33. How many bars of iron each weighing 11 fbs. 10 oz. 11 drs.

must be taken to make up a weight of 4 tons 8 cwt. 3 fbs. 6 oz. 15drs.?

34. Express in *Troy-weight* the weight of a silver dish weighing

3 st. 2 poas, and of 6 scruples of soda.

36. Which is the heavier, a pound of gold or a pound of

III. MEASURES OF LENGTH.

Indian Lineal Measure.

feathers? and by how much?

	athas	,,	1 Bi	ha	100	Links	**	1	Chain
	aths		1 Ra	si	10	Chains		ĭ	Furlong
In th	e NW.P	., 3 Ilahi	Gaj=	ı Ba	ns or	Ganteh	and 20	В	ans=1 Jarib

The following measures are sometimes used :-

1 lnch=72 points=12 lines ; 1 Palm=3 in. ; 1 Hand=4 in. (for measuring horses); 1 Span=9 in.; 1 Cubit=18 in.; 1 Pace=22ft. (milltary)=5 ft. (geometrical); 1 Fathom=6 ft.: 1 Cable's length=120 fathoms; 1 Knot (nautical)=6080 ft.: 1 Degree of Latitude=60 Knots; 1 Chain=4 poles=22 yds; 80 Chains=r mile.

157. To reduce poles to yards, we have to multiply by 54; but since 54 yds is 11 half-yards, we multiply the poles by 11, and dide the product by 2. In the converse operation, to divide by 54, we multiply the yards by 2, and divide the product by 11. The remainder in each case is half-yard, and note that 1 half-yd. is 14. ft. = 1f. 6. in. Also, in reducing miles and futlones to yards, multiply by 1760 and 220 respectively, unless prevented by the form of the question. To reduce yards to miles, divide by 1760.

Note. 1 half-yd. = 1 ft. 6 in. Also 1 po. = 5 yds. 1 ft. 6 in.

Ex. 1. Reduce 9 mi. 4 fur. 23 po. 4 yds. 2 ft. 9 in. to inches.

Ex. 2. Reduce 3126749 inches to miles, &=c.

12)3126749 in.

3) 260562 ft...5 in. .. the result

86854 yds. = 49 mi. 2 fur. 31 po. 7 half-yds. 5 in. = 49 mi. 2 fur. 31 po. 3 yds. 1 ft. 11 in.

11) 173708 half-yards.

40) 15791 po ...7 half-yds. [for 7half-yds. = 3\frac{1}{2} yds. = 3 yds. 1ft. 6in.]

8) 394 fur ...31 po.

40 mi...2 fur.

Examples XXXIV.

1. Reduce (i) to haths or cubits and (ii) to angulis: —
15 kros 1008 dandas; 6 yojan 2 kros 1780 dandas; 20 bi.
4 kat.; 25 bi. 15 kat. 3 cubits; 10 kros 875 dandas 3 haths.

2. Reduce to gaj, &c. :-

- 34256 angulis; 94605 girahs; 420367 angulis; 7035 girahs.

 3. Reduce to *inches*:—
 (1) 3 fur. 135 yds. 4 in.; 5 ml. 200 yds. 3 in.; 512 yds. 2 ft. 9 in.; 4 lea.
- (1) 3 tur. 135 yas. 4 tir. ; 5 tir. 200 yas. 3 tir. ; 12 yas. 2 ti. 9 tir. ; 4 ter. (2) 2 mi. 7 tur. 15 po. 1 yd. 1 ft. 6 in. ; 13 lea. 1 mi. 4 tur. 37 po. 1 ft. 8 in. (3) 3 t mi. 4 tur. 115 yds. 1 ft. 8 in. : 25 mi. 6 tur. 17 po. 4 yds. 3 in.

(4) 25 mi. 450 yds. 31 in.; 25 fur. 39 po. 3 yds. 2 ft. 8 in.

4. Reduce 7 mi. 5 fur. 32 po. 4 yds. to yards 2 lea. 2 mi. 7 fur. to yards 5 mi. 3 fur. 208 yds. 1 ft. to feet; 15 mi. 5 fur. 31 po. to poles.

Reduce to miles, &-c.:—

1 Bengal Bigha=1600 sq. yds.; 1 N.-W. P. Bigha=3025 sq. yds.; 1 Bombay Bigha=3027 sq. yds. Also 1 Madras Cawny=6400 sq. yds.=4 Bengal Bigha=3027

159. English Square Measure..

- 144 Square Inches (sq. in.) make 1 Square Foot (sq. ft.)

 o Square Feet , 1 Square Yard (sq. yd.)
 - 301 Square Yards " 1 Square Pole (sq. po.)
 40 Square Poles " 1 Rood (ro.)
 - 4 Roods or 4840 sq. yds. , I Acre (ac.)
- 640 Acres " I Square Mile (sq. mi.)
 10,000 Sq. links make 1 Sq. chain | 484 Sq. vds. make 1 Sq. chain.
- 10 Sq. chains , I Acre 100,000 Sq. links...I Acre.

 A Rod of Brickwork = 272\frac{1}{2} \text{ sq. fr. A Rod of Building = 36 sq. yds.}

 A Square of Flooring, Roofing, &c. = 100 sq. ft. A Yard of Land = 30ac.

A Hide of Land=100 ac. One sq. chain=10,000 sq. links.
40 ac.=121 Bengal Bighas; 5 ac.=8 N.-W.P. Bighas; 81 ac.=242
Punjab Bighas; 160 ac.=121 Madras Cawnies. Also 1 sq. mi.=1936

Bengal Bighas = 1024 N.-W.P. Bighas = 484 Madras Cawnies.

160. To reduce square poles to square yards, we have to multiply by 304; but since 304 sq. yds. is 121 qr. sq. yds., we multiply be sq. poles by 121 and divide by 4. In the converse operation

the sa, poles by 121 and divide by 4. In the converse operation, to divide by 304, we multiply the sq. yds. by 4 and divide by 121. The remainder in each case is qr.-sq. yds. and note that 1 qr.-sq. yd. is 24 sq. 18 = 2 sq. 18 of sq. in. Also in reducing acres and roods to sq. yards, multiply by 4840,

and 1210 respectively, unless prevented by the form of the question. To reduce square yards to acres, divide by 4840.

Note. 1 qr. sq. yd. = 2 sq. ft. 36 sq. in. ; 2 qr. sq. yd. = 4 sq. ft. 72 sq. in. ; 3 qr. sq. yds. = 6 sq. ft. 108 sq. in. Also 1 sq. po. = 30 sq. yds.

2 sq. ft. 36 sq. in.

Ex. 1, Reduce 3 ac. 2 ro. 23 sq. po. 10 sq. yds. 8 sq. ft. 18 sq. in.

10 8 18 17646 sq. yds. 5 sq. ft. 126 sq. in. Ex. 2. Reduce 9532482 sq. inches to acres.

∫ 12)9532482 sq. in.

114 12) 794373...6 9) 66197 sq. ft. 9 114 sq. in. ... the result

7355 sq. yds...2 sq. ft. = 1 ac. 2ro. 3 sq. po. 17 qr.-sq.yds...

4) 6 ro...3 sq. po. = 1ac. 2ro. 3sq. po. 4sq. yds. 5sq. ft. 6sq.in.

Examples XXXV.

1. Reduce to gandas or square cubits :--

5 bi. 3 kat. 6 ch.; 45 bi. 9 kat. 7 ch.; 25 bi. 15 kat. 4 ch. 15 ga.; 135 bi. 11 kat.; 425 bi. 17 kat. 13 ch. 17 ga.; 29 bi. 17 kat.

2. Reduce to bighas:—
357628 ch.; 10486 ga.; 8326675 sq. cubits; 4675900 ga.; 125720 ch.

3. Reduce to kachvansi:—
24 bi. 15 bisv.; 136 bi. 14 bisv. 17 bisvansi; 86 bi. 7 bisv.; 423 bi.

10 bisv. 12 bisvansi 15 kachv.

4. Reduce to square inches:-

8 sq. mi. 340 caw. ; 15 sq. mi. 285 caw. 12 grounds ; 25 sq. mi. 375 caw. 20 grounds 1452 sq. ft. ; 3 caw. 13 manies 5 sq. ft.

5. Reduce to sq. karam or sarsai :--

26 ghm, 1 bi. ; 42 ghm. 1 bi. 3 ka. 15 marlas ; 42 bi. 2 ka. 4 sar. 6. Reduce to kathis :—

163 bi. 7 pands 3 ka.; 4 cha. 168 bi. 15 pands; 42 bi. 112 ka.
7. Reduce:—

(1) 246053 kachvansi to bighas. (2) 34512876 kathis to bighas.

(3) 43276850 sq in. to cawhies. (4) 403207654 kathis to chahurs. (5) 1130692 manies to sq. miles. (6) 8740361 sq. sarsai to ghumas. 8. Reduce to sq. inches:—

(1) 17 sq. yds. 8 sq. ft.; 3 sq. yds. 6 sq. ft. 75 sq. in.; 29 sq. yds.; 54 sq. yds. 8 sq. ft. 104 sq. in.; 3 ro. 17 po. 21 sq. yds. 8 sq. ft. [2] 17 sq. 14 po.; 1 ac. 2 ro. 3 po. 4 sq. yds.; 3 ro. 22 po. 2 rsq. yds.

8 sq. ft. 116 sq. in.; 56 ac. 2 ro. 25 po. 37 sq. yds. 5 sq. ft. 73 sq. in. (3) 38 ac. 2 ro. 35 po.; 324 sq. po.; 3 sq. mi.; 4 ac. 26 po.; 42 ac.

9. Reduce to acres :-

(1) 16553 sq. po.; 13678 sq. yds.; 170184 sq. ft.; 82973 sq. po.; 895487 sq. yds.; 2709437 sq. ft.

(2) 123456789 sq. in. ; 94501362 sq. in. ; 455462764 sq. in. ; 72013512032 sq. in. ; 355433005 sq. in.

10. Reduce :-

- (1) 14 ac. to sq. links. (2) 1803 ac. to sq. miles.
- (3) 5200000 sq. yds. to sq. miles. (4) 428 sq. chains to sq. inches. (5) 5621 sq. po. to sq. chains. (6) 535 sq. miles to bighas.
 - 11. Reduce (Beneal birhas) :-

5445 bighas to acres: 2560 ac. to bighas; 9680 bi. to acres; 14400 ac. to bighas; 7260 bi. to acres; 92360 ac. to bighas.

12. Reduce: 629200 Bengal bighas to N.-W. P. bighas: 9720 Bengal bighas to Punjab bighas: 320780 Bengal bighas to Madras Caunies: 768000 N.-W. P. bighas to Bengal bighas and 28800000 Punjab bighas to Bengal bighas.

13. Add together :-

(1)	bi.	ka.	ch.	(2)	sq. yds.	sq.ft.	sq. in	. (3) ac.	ro.	po
	30	15	10		32	2	86		29	3	28

(4)	ro.	sq.po.	sq.yds.	(5) 0	c. ro. po	. sq.y	ls. (6)	ac. po.	sq.yds.	sq.ft.	sq.in

1 23 34 114 2 15 27 Ì 39 т1 0 17 27 6 11 1 24 11 ō 27 16 42 0 35 21 18 20

14. Perform the following subtractions :-

	kat.			(2) ac.			(3)	ac.	ro.	po.	sq.yds
125	8	9		96	1	19		45	1	29	251
76	12	13	. /	29	3.	30		39	3	18	251

15. Multiply :-

- (1) 120 bi. 14 kat. 10 ch. by 49; 125 bi. 15 kat. 12 ch. by 154.
- (2) 17 ac. 1 ro. 31 po. by 72; 2ro. 27po. 15sq.yds. 8sq.ft. by 6 and by 10. (3) 37 ac. 3 ro. 10 po. 28 sq. yds. 4 sq. ft. 103 sq. in, by 8 and by 75.
- 16. Divide:—
 (1) 112 bi. 18 kat. 14 ch. by 99; 1539 bi. 15 kat. 7 ch. by 102.
- (1) 112 bi. 18 kat. 14 ch. by 99; 1539 bi. 15 kat. 7 ch. by 102. (2) 82 bi. 16 kat. 12 ch. by 72; 130 ac. 1 ro. 28 po. by 120.
- (3) 854 ac. 3 ro. 27 po. 8 sq. yds. 8 sq. ft. 45 sq. in. by 9 and by 240.
- (4) 166 ac. 2 ro. 6 po. 30 sq. yds. 5 sq. ft. by 7 ac. 38 po. 17 sq yds. 1 sq. ft.; 935 bi. 12 kat. 12 ch. by 55 bi. 12 ch.

17. How many allotments each equal to 2 ro. 5 po. 13 sq. yds. 6 sq. ft. 108 sq. in. can be formed out of 158 ac. 2 ro. 20 po.?

18. A certain district contains 514164 ac. and another 95805 ac. How many sq. miles does the one contain more than the other?

V. MEASURES OF SOLIDITY.

Bengal Measure of Solidity.

13824 Cubic Angulis make t Cubic Cubit or C. hath.

8 Cubic Cubits , 1 Cubic yard. 8 Cubic yards or 64 cub, cubits , 1 Chouka.

English Measure of Solidity.

1728 Cubic Inches (cub. in.) make t Cubic Foot (cub. ft.)

27 Cubic feet , 1 Cubic yard (cub. yd.)

1 Cub, hath=5832 cub. in. A Load of rough Timber=40 cub. ft. A Load of squared Timber=50 cub. ft. A Ton of Shipping=42 cub.ft. A Stack of wood=128 cub. ft. A Cord of wood=128 cub. ft.

Examples XXXVI.

1. Reduce to cub. cubits :-

42 choukas 54 cub. cubits; 87 choukas 62 cub. cubits; 146 choukas 32 cub cubits; 144 choukas.

2. Reduce to cub. in. :-

24 cub. yds. 7 cub. ft. 144 cub. in. ; 18 cub. yds. 1274 cub. in. ; 12 cub. yds. 23 cub. ft. ; 23 cub. yds. 1000 cub. in.

Reduce to cub. yds. :—

200000 cub.in.; 138297 cub.in.; 141721 cub.in.; 863005 cub.in.
4. Reduce to chankus:--

36248742 cub. cubits; 4308756 cub. cubits; 862097 cub. cubits.

Reduce 1053 choukas 28 cub. cubits to cubic angulis.

6. Add together :-

(1) Chouka cub, yds. cub. hath. (2) c. yds. c. ft. c.in. (3) c. yds. c.ft. c.in. .8 53 7 1249 328 15 323 27 27 23 472 237 19 484 20 16 785 1384 10 1259 134 45 18 49 3 1186 546 0 342 729 II 1075

VII. MEASURES OF TIME.

186.	Indian	Measure	of	Time.

- 60 Anupals (anu.) make I Bipal (bip.) 60 Bipals ... I Pal (tal.)
- 60 Pals " 1 Danda (dan.)
 - 7½ Dandas or 3 hours "I Prahar (pr.)
 8 Prahars or 60 dandas "I Din or day (da.)
 - 8 Prahars or 60 dandas " I Din or day (da.)
 7 Dins " I Saptaha (sap.)
- 7 Dins " 1 Saptana (sap.)
 15 Dins " 1 Paksha (pak.)
- 30 Dins or 2 pakshas "I Mas or month (ma.)
 12 Masas "I Batsar or year (ba.)
- 12 Batsars 1 Ghanta ; I Danda=24 minutes. A chandra mas (lunar month) = 20 days, nearly.

English Measure of Time.

- 60 Seconds (sec. or 1*) make 1 Minute (min. or 1*)
 - 60 Minutes " Hour (hr.)
 - 24 Hours " I Day (da.)
 - 7 Days " I Week (wk.) 365 Days " Year (yr.)
- 100 Years " I Century.

 A month = 30 days. A year = 4 quarters = 12 calendar months =
- A month = 30 days. A year = 4 quarters = 12 carendar montus = 52 weeks.
- A fortnight=2 weeks. A month=4 weeks. A Leap-year=
 366 days. Each day is considered to commence at midnight.

168. The number of days in the Calendar Months are recollected by means of the following lines:-

Thirty days hath September, April, June and November; February has twenty-eight alone, And all the rest have thirty-one; But leap-year coming once in four, February then has one day more.

Mahomedan Names: Maharam (মহন্ম), Safar (শাদ্র), Raviulayal (রখিল বাটিলা), Ravisssani (রখিলসন্মিনি), Jamadiyal-auyal (জনাখিল বাটিলণ), Jamadiyassani (ক্ষাবিদ্যানি), Rajab (রজন), Saban (শাধ্য), Ramjan (রম্বানি), Saoyal (শিঙালি), Jelkad (ব্জাক্ষ্ম), and Jelhajja (ব্জাক্ষ্ম)

A Bengali month is generally supposed to consist of 30 days; but this is not strictly correct. Some months are 29 days, some 32, some 31 and some 32.

THE HINDU CALENDAR.

160: The Hindu (Dhandra Batsar (Lunar year) consists of yel days his, a8 min. 57 sec. It is therefore shorter than the Saur Batsar (Solar year) by 10 days 21 hrs. 23 min. 12 sec. After a period 521 months to the difference amounts to a month; consequently to make the Lunar-year system correspond with the Solar-year system correspond with the Solar-year system and Moon in the same sign of the Zodiac. The intercalated month and the month preceding it go by the same name. The intercalate month is called Malla or Lutrealary Mas. This is done in those parts of India where the lunar year and lunar month are reckoned, a nonth in the same sign of the Zodiac. The reckoned, a month is called Malla or Lutrealary Mas. This is done in those parts of India where the lunar year and lunar month are reckoned, a nonth is facility, in order to make the religious festival, in order to make the religious festival called Malla Malla.

THE ENGLISH CALENDAR.

170. The interval of time between two passages of the Sun across the meridian of any place when taken a its meon mainfulue, is termed a day or a mean solar day, which is supposed to be divided into 44 equal portions called mean solar hours. It appears from the observations and calculations of Astronomers that the time between the Sun's leaving a certain point (First point of Aries) in his path called the Eddylfie and returning to it again, consist of 357 32248 in the Contract of the Sun's leaving the Sun's 478 accorded, very nearly, which is therefore termed a Solar Year.

For the purposes of civil life it would be exceedingly inconvenient that one year should commence at one time of the day and another at a different time; and this circumstance gave rise to the invention of the civil year, which will be explained in the next Articles.

171. When the Science of Astronomy was much less perfect than it is at present, the length of the solar year was much less accurately known; and accordingly we find that in the time of Julius Cates it was supposed to consist of 566 days, for across that if out of Johr years in succession, any 'Area consisted of 56f days each and the tensihing one of 566 days, the Sun would have returned at the act their compencement.

The scheme was called the *Julian Calendar*; and if the hypothesis had been correct, it would have been attended with much convenience; the additional *day* was called **Intercalary**, and the year in which it was added or inserted was termed **Bissextile**.

The regulation, applied to the years of the Christian Era, was so managed that whenever the number of years was divisible by 4, the corresponding year consisted of 366 days and was called Loop-year, the month of February having 29 days in that year, and each of the remaining three years 28 days, without interfering at all with their order.

Hence also, the remainder after the division of any other number of years by 4, was the number of years since a leap-year occurred up to that year. Thus, in the year 1805 this remainder is 1; and accordingly it is 1 year since the last leap-year happened and it is 3 years before the next will occur, according to this scheme.

178. Since the true solar year is 365'242218 days and not 565'53 days, it is evident that the reckoning of time according to the Julian Calendar would place the end of the year after the time when the Sun had returned to the point of the Eciptic occupied by it at the beginning of the year and consequently in advance of the course of the Seasons; but the error in one year is 56723-56'242218 = 007783 of a day. Therefore in 400 years the error would amount to 007783'240 or 37128 days.

Now, according to the Julian Calendar 400 years would comprise too Leap-years; and since we find that this reckoning fulls nearly 3 days after the true time, if there were only 97 Leap-years in 400 years; and it is accordingly ordained that whenever the numbers expressing and it is accordingly ordained that whenever the numbers expressing the continuous states of the continuous that we have a continuous to the continuous and the continuous that the content of the continuous that th

The Calendar thus corrected, though not absolutely accurate, is well adapted to every practical purpose, as the error in 2000 years will not amount to much more than themps-right hours. The correction and the calendar has since been called the Gregorian Culendar; but it was not introduced into Protestant Countries till a much later period. In England it was adopted on the xenud day of Suptember 1732 when the error amounted to 11 days ; and it is called the New termed the Old Style. The most protection is the control of the countries of the coun

The New Style has not yet been adopted in Russia, so that since 1752 they have had one more leap-year (1800) than we have, and they are now 12 days behind us. Thus Old Michaelmas and Old Christmas taking place 12 days after New Michaelmas and New

Christmas.

173. The Civil year thus fixed and determined is then subdivided into twelve Calendar Months, as described in the Table. The word Month however is used in different senses; sometimes to denote a twelfth part of a year; sometimes as equivalent to 4 weeks or 28 days; and accordingly year is equivalent to 15 months and 1 day, or to 52 weeks and t day, with the addition of another day when it happens to be Lean-year.

174. To reduce prahars to dandas, multiply by 15, and divide the product by 2; the remainder (if any) is a half-danda or 30 pals. Conversely, to reduce dandas to brahars, multiply by 2 and divide the product by 15; the remainder (if any) is equal to so many half-dandas.

4. Subtract 149° 53' 56" from 277° 36' 47".

5. Multiply 24° 12' 16" by 42; 19° 14' 25" by 36.

Divide 25° 25′ 32″ by 16; 144° 44′ 7″ by 22.
 In 56 reams of paper, how many sheets?

Reduce 67835 kahans 11 pans 18 ga. 3 units to units.

9. Reduce 7297865 units to kahans; 9 scores to dozens.

10. Multiply 9 kahans 2 pans 17 ga. 2 units by 82, and by 346.

Examples XL.

(Recapitulatory Exercises).

In 340 pistoles at 17s. 6d. each, how many pounds sterling?
 How many moidores of 27s. each, are equivalent to 198

guineas and to £500638. Is.?

3. In £453. 16s. 8d., how many pieces of coin valued at

3s. 4d each? how many at 11s. 8d each?

What number of weights of 14 oz. 13 drs. each, are equivalent to 25 cwt 2 grs. 13 lbs. 14 oz. 12 drs.?

 If I spend £2. 7s. 1½d. a day, how much is that in 28 weeks, and also in a year of 365 days?

 If each of 114 persons receive £1. 18s. 6½d, what is received them all?
 If the clothing of 754 soldiers come to £3178, 11s. 7½d.

how much is that for each man?

 If a person complete a journey of 422 mi. 3 far. 38 po. in 37 days; what distance does he travel each day?

9. A year being equivalent to 365 days 6 hours, find the number of years, &c., in 295402374 seconds.

10. Multiply 4 dins 3 pr. 2 dan. 25 bip. 15 anu. by 401.

11. Reduce 9367875 angulis to kros; 14978631 gandas to bighas.

 Find how often a rod 2 ft. 10 in. in length, must be applied to measure 10 miles 140 yds.

 Find the number of yards in 40 pieces of cloth, each containing 42 yds. 2 qrs. 2 nls. 14. If a soldier's pay for a year of 365 days be £9. 2s. 6d.; how much is that for a day?

15. If a person's yearly income be £65, 12s. 6d., and he lay by £20 a year; how much does he spend each day?

16. How many pounds of silver are there in a half-dozen of dishes, each weighing 51 oz. 10 dwts. and a dozen of plates, each weighing 15 oz. 15 dwts. 22 grs. ?

17. Express 452 dan. 48 pal. 45 bip. in English measure.

18. If 145 sheep cost £169, 3r. 4d, what is the price of a score at the same rate?

 If 8 packages of cloth, each consisting of 4 parcels, each parcel of 10 pieces, and each piece of 26 yards, cost Rs.66560; what

is the price of a yard?

20. The sum of £263. 8s. 114d. is distributed equally among a number of persons, so that the share of each is £37. 12s. 84d.;

find the number of persons.

21. A boy's school, to and from which he walks daily, is distant from his home I kros 250 dan. I gai I hath 7 girahs. How many

girahs does he walk every day?

22. Reduce 35 tons 10 cwt, 90 lbs. 12 oz. 135 grs. to grains.

93 Parluss so tana too an in to serve first

23. Reduce 294322493 sq. in. to acres, &-c.

24. Find the weight of copper coin required to pay a debt of £1000, when 3 pennies weigh 1 oz.

25. Which is the heavier, t fb. of gold or t fb. of sugar?

26. If 28 lbs. 9 oz. of gold be worth £1343. 6s. $10\frac{1}{5}d$, what is the worth of 1 ounce?

27. Among how many boys can I distribute £14. 93 9d., giving to each boy a half-crown, a florin, a four-penny piece, and also a three-penny piece?

28. If a man's net income be £1785, 123, 6d, how much may he spend on an average per day to the nearest farthing, so as not to run into debt?

29. Reduce 5792685 inches to miles, &-c.

30. Jadu was born at 6 o'clock A. M., 24th June, 1872; how old will he be at 3 o'clock P.M., 10th Jan., 1898?

31. Find the sum of 32 cwt. 2 qrs. 15 lbs. 120z.; 47 cwt. 25 lbs. 90z.; 5 cwt. 3 qrs. 17 lbs. 10 oz.; 2 dwt. 1 qr. 19 lbs. 15 oz.; and 9 cwt. 3 qrs. 14 oz.; divide the sum by 4 cwt. 2 qrs. 18 lbs. 8 oz.

32. If 15.5\frac{1}{2}d be the unit of money, what will be the measure of \(\frac{1}{2}7. \) 175. 6d and of \(\frac{1}{2}20. \) 15. 0\frac{1}{2}d?

33. If 2 ft 6 in. be the unit of length, what number will represent (i) 10 miles, (ii) 25 miles 760 vds.?

34. If 6 hrs. 32 min. 10 sec. be the unit of time, what will be the measure of 74 days 1 hr. 49 min. 20 sec.?

35. If 2 lbs. 5 oz. be the unit of weight, what number will measure 5 cwt. 6 lbs. 9 oz.?

36. If 5 sec. be the unit of time, what will be the measure of

3 hrs. 5 sec. and of 15 hrs. 20 min.?

37. 22nd September 1897 was Wednesday. What day of the week was 22nd September 1797 and what day of the week will 22nd September 1997 be?

38. 19th September 1897 was Sunday. What day of the week was 23rd January 1807 and what day of the week will 23rd January 1907 be?

X. MISCELLANEOUS PROPOSITIONS.

(IN COMPOUND QUANTITIES.)

177. The Unitary Method. (Simple Cases).

If the value, weight, length, &c. of any number of units be given, we can by Compound Division find that of one unit of the same kind; and the value, weight, length, &c. of one unit being found, we can by Compound Multiplization find that of any number of units of the same kind. The solution which combines these two processes is called The Method of Reduction to the Unit or The Unitary Method. (1) The value, weight, length, &c. of one unit being given, we can

by Compound Multiplication find the value, weight, length, &c. of any number of units of the same kind.

Ex. The price of a maund of sugar is Rs. to. 15a. 6p.; find the price of 35 maunds.

Rs.10 15a. 6b. The price of 1 maund = Rs.10. 15a. 6b. 35 the price of 35 mds. = Rs.10. 15a. 6b. \times 35 \times 35 \times 38. 14a. 6b. = Rs.38. 14a. 6b.

(2) The value, weight, length, &c. of any number of units being given, we can by Compound Division find the value, weight, length, &c. of one unit of the same kind.

Ex. If 30 mds. of rice cost Rs. 134. 1a.; what is the price per maund?

30) Rs.134. 1a. (4Rs.

The price of 30 mds. = Rs.134. 1a. 1b. 1c. the price of a md. = Rs.134. 1a. +30 = Rs.4. 7a. 6p. 210

15 12 180(6p. (5) The value, weight, &c. of a certain number of units being given, to find the value, weight, &c. of a certain other number of units of the same kind.

Proceed as in the following Examples :-

Ex. 1. If 7 yards of cloth cost Rs.26. 4a., what will be the cost of 15 yds. of the same?

7) Rs.26. 4a. 7 vards cost Rs.26. 4a.

Rs. 3. 12a. ... 1 yard costs Rs. 26. 4a. + 7 = Rs. 3. 12a. ... 15 yards cost Rs. 3. 12a. \times 15 = Rs. 56. 4a.

Ex. 2. If 7 lbs. of tea cost 15s. 9d, what will be the cost of 12 lbs.?

7)15s. 9d. 7lbs. cost 15s 9d.

2s. 3d. : 1lb costs 15s. 9d. +7 = 2s. 3d. 12 : 12lbs. cost 2s. 3d. × 12 = £1. 7s.

£1. 75.

(4) The value, weight, &c. of a certain number of units being given, to find the number of units of the same kind corresponding to some other value, weight, &c.

Proceed as in the following Examples :-

Ex. 1. If 12 manuds of rice cost Rs.35, find how many manuds of the same can be bought for Rs.20. 6a. 8p.

12) Rs. 35. Rs. 20. 6a. 8 β . = 3920 β .; Rs. 2. 14a. 8 β . = 560 β . Rs. 2. 14a. 8b. the no of mds. required = 3920 + 560

Rs. 2. 14a. 8p. the no. of mds. required = 3920 + 5 the price of a maund.

Ex. 2. If 25 men finish a piece of work in 16 days, in how many days will 20 men finish it?

25 men finish the work in 16 days,

20)400 days. . 1 man will finish in (25 × 16) or 400 days. 20 days. . 20 men will finish in 400 + 20 or 20 days. Ans.

Ex. 3. How many men can perform in 24 days a piece of work which 15 men can perform in 40 days?

In 40 days the work is done by 15 men.
in 1 day the work is done by (15×40) or 600 men.

24)600 men. : in 24 days, the work is done by 600+24 or 25men.

Ans.

Note. In questions such as the two above, it should be noticed that to a diminution in the number of men corresponds an increase in the number of days, and vice versa.

Examples XLI

- 1. What is the value of 72 reams of paper, at 13s. 8d. a ream?
- 2. Find the cost of 120 ounces of silver, at 5s. 3\d. an ounce.
- 3. What will be the price of 1 lb., when 1 cwt, costs £137, 18s.?
- 4. If 41 cwt. cost £52. 10s. 72d., what is the price of a cwt.?
- 5. If 6 chairs cost Rs.32. 12a., what will 3 dozen cost?
- 6. If a workman's wages for 12 days be Rs.14. 4a. 6p., what would it amount to in 18 days?
- 7. If 4 yards of flannel cost Rs.3, 13a. 4 \rlap/p ., what is the cost of 57 yards of the same?
- 8. If 42 bighas of land be rented for Rs.640, 8a., what would be the rent of 61 bighas?
- 9. If a man earn Rs.15, 12n, in 6 days, in how many days will be earn Rs.189?
- If I travel by Railway 85 miles for Rs.7. 15a. 6p., how far may I travel for Rs.9. 6a.?
- 11. If 13 sheep cost Rs.175.8a, how many may be purchased for Rs.2160?
- 12. If 7 seers of tea cost Rs.7.9a.4p, what will be the cost of 1 md. 24 sr. 8 ch. 7
- 13. A clerk's salary is Rs.1916. 4a. per annum; what ought he to receive for 60 days' service?
- 14. How much land may be rented for Rs.705, 4a., if 5 acres are rented for Rs.46. 10a. 8p. ?
 15. How many men can perform in 12 days a piece of work,
- which 15 men can perform in 20 days?

 16. If 3 mds. 12 sr. 8 ch. of sugar cost Rs.16. 96., what will
- 2 mds. 14 sr. 10 ch. cost?
 17. Find the quantity of rice which can be purchased for Rs.86.
- 3*a*. $9\frac{1}{2}p$, when 70 mds. 10 sr. cost *Rs.*270. 12*a*. 1p. 18. If 3 cwt. 69 lbs. cost £14. 3s. 6*d*., how much may be bought for £23. 12s. 6*d*.?
- 19. If 2 cwt. 3 qrs. 7 lbs. cost £5. 17s. 8\(\frac{1}{2}d\), what is the cost of 9 cwt. ?
- 20. In how many days would 171 men perform a piece of work, which 108 men can perform in 266 days?

178. Revolution of Wheels.

A wheel in making one revolution passes over a length of ground exactly equal to its circumference. Hence, if we multiply

the circumference by the number of revolutions made, we shall find the distance passed over; and conversely, if we divide the distance passed over by the circumference, we shall find the number of revolutions, or by the number of revolutions we shall find the circumference.

Ex. 1. A carriage-wheel is 4 yds. 2 ft. 7 in. in circumference, and makes 1456 revolutions on a journey. What is the length of the journey?

Ex. 2. A wheel makes 131 revolutions in passing over 669 yds. I ft. 8 in. ; what is its circumference?

The circumference=669 yds. 1 ft. 8 in. +131=5 yds. 4 in.

Ex. 3. How many revolutions will a carriage-wheel 3 yds. 2 ft. 6 in, in circumference, make in a journey of 7 miles 3 fur. 34 po. 4 vds. 1 ft.?

Examples XLII.

1. If a wheel 5 yds. 2 ft. 4 in, in circumference makes 1080 revolutions on a journey, how far will the carriage go? 2. If a wheel 5 yds. 1 ft. 6 in. in circumference makes 64640

revolutions, what space will it pass over?

3. How many revolutions will the wheel of a carriage, 4 ft. 7 in. in circumference, make in 2 mi, 4 fur. ?

- 4. A wheel makes 514 revolutions in passing over 1 mi. 467 yds. I ft.; what is its circumference?
- 5. A boy's hoop is 3 yds. 10 in. round; how many miles of ground will it bass over in 2501 turns?
- 6. The fore-wheel of a carriage is 4 ft. 6 in. round, and the hind-wheel a foot longer; how many more turns will the former make than the latter in a distance of 30 miles?
- 7. A wheel makes 1540 revolutions in passing over 2 mi. 458 yds. 1 ft.; what is its circumference?
- 8. How many revolutions will a wheel 4 yds. 2 ft. in circumference make on a journey of 12 mi. 696 yds. 2 ft.?
- 9. The circumference of the fore-wheel of a carriage being 8 ft. 3 in., and that of the bind-wheel 11 ft. 11 in., how many more revolutions would be made by the fore-wheel than by the hind-wheel in going a distance of 52 miles?
- 10. The driving wheel of a locomotive is 5 yds. 2 ft. 9 in. in circumference, and makes on an average 3 revolutions a second; find the rate of the train per hour.
- 11. The fore-wheel of a carriage which is 2 yds. 2 ft. 6 in. in circumference makes 4350 more revolutions than the hind-wheel in going over a distance of 10 miles 2 fur. 120 yds.; what is the circumference of the hind-wheel?
- Find the circumference of the wheel of a locomotive which
 makes on an average 4 revolutions in a second, and which performs a
 journey of 76 miles in 1 hour 36 min.
- 13. A wheel revolves 1028 times in going 2 mi. 934 yds. 2 ft. What is its circumference?
- 14. In going over a distance of 205 miles the fore-wheel turns 98400 times and the hind-wheel 78720 times. How much longer is the circumference of the hind-wheel than that of the fore-wheel?
- 15. The circumference of the fore-wheel of a carriage is 8 ft. and that of the hind-wheel is 10 ft.; in what distance will the fore-wheel make 100 revolutions more than the hind-wheel?

179. Averages.

- The Average or Mean of any number of given quantities o the same kind, is that quantity which when substituted for each of the given quantities makes their sum the same. Hence, to find the Average of any number of quantities we divide the sum of them by their number.
- Ex. The receipts at a Railway Station are as follow: Jan., Rs.2458. 14a. 8p.; Feb., Rs.2019. 6a.; March, Rs.2857. 4a. 8p.; April,

Rs. 3051. 1a. 4p.; May, Rs. 3463. 13a. 4p.; and June, Rs. 4007. 10a.; find the average receipts per month.

180. Nearest money.

When there is a remainder after division, we observe, that if the quotient be multiplied by the divisor the product will be less than the dividend; also that if the quotient be increased by I and be then multiplied by the divisor the product will be greater than the dividend. Hence, in all cases, a Bearder sum can be found, which the product will be greater than the dividend. Hence, in all cases, a Bearder sum can be found, which the product will be considered to the product of the

Ex. 1. Find the nearest sum of money to £197. 11s. 6d. that can be divided by 23 without remainder.

Ex. 2. If £197, 11s, 6d be given for 23 pieces of cloth, find to the nearest penny the price given for each piece.

From the last Ex, it appears that £8. 11s. 9d. a piece would give 15d. too little, and £8. 11s. 10d. would give 8d. too much; hence, to the nearest penny the price would be £8. 11s. 10d. Ans.

Examples XLIII.

1. On Sunday I spent no money, on Monday Rs.43. 14a., on Tuesday Rs.51. 12a. 8p., on Wednesday Rs.46. 14a. 6p., on Thursday Rs.52. 8a., on Friday Rs.52. 15a. 6p., on Saurday Rs.26. 4a.; find my average daily expenditure during the week.

 The daily receipts of a grocer for the week are as follow:— Monday Rs.47. 10s. 2.6; Tuesday Rs.56. 8a. 46. : Wednesday Rs.75. 7a.; Thursday (being a holiday) nothing; Friday Rs.30, 7a. 45.; and Saturday Rs.159, 13a. 26.; find his average daily receipts (1) excluding Thursday, and (2) including Thursday.

3. Find the least sum of money that must be subtracted from

£663. 14s. 8d. to make the remainder divisible by 37.

4. Deduct Rs.26. 13a. 6p. from Rs.562. 8a., and divide the resulting sum equally arong 20 persons to the nearest pie; how much will each person receive, and how much will remain over?

56. The average price of a quarter of wheat for 19 years was 56. 8d. a quarter; for the first five years the average price was 61. 3 $\frac{1}{2}d$. a quarter, for the next 4 years 58. 0 $\frac{1}{2}d$. for the next 7 years 58. 0 $\frac{1}{2}d$., find the average of the last 3 years.

 Find the nearest sum of money to Rs.3339. 10a. 10p. that can be divided by 29 without remainder.

 The mean height of 6 mountains is 10357 feet: find what the height of the seventh mountain must be, in order that the mean height of the seven mountains may be 10643 ft.

8. 120 tons of coal are purchased for £87. 16s. 9d.; find to the nearest farthing the price at which they must be retailed per ton, so that no loss may be incurred.

Find the least sum of money that must be added to Rs.3658.
 12a. 4p. to make the sum divisible by 127.

10. A tradesman's average annual income from 1830 to 1850 was Rs.3744, 13a.49. In 1830 his income was Rs.3609, 6a.89, and in 1851 his income was Rs.3600, 8a.89,; what was his average annual income from 1831 to 1851 (inclusive)?

181. Gain and Loss.

The price at which an article is bought is called its cost price; that at which it is sold, its selling price. If the selling price be greater than the cost price, it is gain; if less, it is loss. Hence the difference between the two prices is the gain or loss.

 Given the quantity sold, and also the cost and selling prices, to find the gain or loss. Ex. 1. A person bought 524 yards of cloth at Rs.7. 14a. 6p. per yard and retailed it at Rs.8. 2a. 4p. per yard; what was his profit?

Selling price per yard = Rs.8. 2a. 4β. Cost....= Rs.7. 14a 6β.

. gain per yard = 3a. 10p.

.. gain on 524 yards = 3a. 10p. × 524 = Rs. 125. 8a. 8p. Ans.

Ex. 2. A trader bought 1763 yards of cloth at 6s. 11d. per yard and retailed it at 5s. $3\frac{1}{6}d$. per yard ; what was his loss?

Cost price per yard=6s. 11d. Selling price = 5s. 3½d ... loss per yard=1s. 7½d.

:. loss on 1763 yards = 1s. 7\d. \times 1763 = £143. 4s. 10\d. Ans.

... loss on 1703 yards = 15. 7 \(\frac{1}{2}\)d. \(\frac{1}{1703} = \frac{1}{2}\)\(\frac{143.}{45.}\)\(\frac{10}{2}\)d. \(\frac{1}{2}\)d. \(\frac{1}\)d. \(\frac{1}{2}\)d. \(\frac{1}{2}\)d. \(\frac{1}\)d. \(\fra

(2) Given the gain or loss, and the cost and selling prices, to find the quantity sold.

Ex. 2 A mercer bought some gloves at 25, 24d, a pair, and by

selling them at 3s. 6d per pair, gained £9. 6s.; how many pairs did he buy?

Selling price per pair = 3s. 6d. Cost.... = 2s. $2\frac{1}{2}d$.

∴ gain per pair = 1s. 3½d.=62q.

Now, the whole gain =£9 6s.=8928q. ∴ the number of pairs bought=8928+62=144. Ans.

Examples XLIV.

 A person bought 500 yds. of cloth at Rs.7. 14a. per yard and retailed it at Rs.8. 2a. per yard; what was his profit?

2. A person gave Rs.200 for 48 cwt. of goods; what does he gain by selling them at Rs.5 a cwt.?

A man buys 35 sheep for Rs.360 and 30 more for Rs.460;
 what will he gain or lose by selling them at Rs.15. 4a, each?

4. A merchant bought 35 pieces of cloth measuring on an average 29 yards each at 35. 10½d a yard, and sold them at 55. 7d a yard; what profit did he make 7

5. I bought 360 yds. of cloth at Rs.2. 10a 8p. per yard, of which I sold 210 yds. at Rs.3. 9a. 4p. per yard; but the article advancing in price, sold the remainder at Rs.4. 8a. per yard; what did I gain on the whole?

6. I buy 84 books at Re.1. 152 82 each, and sell them at a profit of Re.70; what is the selling price of each?

 A shop-keeper purchases 35 reams of scribbling paper at Rs.7, 4a. per ream; the carriage of the paper costs Rs.4, 12a. He sells it at 8a. 8p. a quire with the exception of the out-side quires of each ream, which he sells at 5a. a quire. Find his gain.

8. A grocer gave Rs. 500 for 16 cwt 2 qrs. 18 lbs. of sugar, and he lost Rs. 72. 6a. by retailing it; at what rate did he sell it per lb.?

9. I buy a number of books at Re.1. 6a. 40 each and sell them at Re.1. 10a. each. If 1 thereby make a profit of Rs.22, how many books do 1 buy?

10. A person gives Rs.556. 8a. for a certain number of gallons of wine. He sells it at Rs.2. 10a. a gallon, and thereby makes a profit of Rs.56. 12a. How many gallons does he buy?

11. Find the cost of 20 dozen bottles of wine at Rs.2. 7a. 8p. per bottle; and if 3 bottles be spoiled, what will the merchant gain by selling the remainder at Rs.2. (20. 8p. per bottle?

selling the remainder at Rs.2. 10a. 8p. per bottle?

12. A cabinet dealer bought chairs at Rs.11. 15a. a piece, and lost Rs.9. 12a. by selling each at Rs.11. 2a. How many chairs did

lost Rs.9. 12a. by selling each at Rs.11. 2a. How many chairs did he buy? 13. A person lays out £43. 9s. 4d in spirits at 5s. 4d. a gallon;

13. A person tays out £43, 93. 4a. in spirits at 53. 4a. a gailon; 19 gallons leaked out in the carriage; he however sold the remainder at 7s. 6a. a gallon; what profit did he make?

14. A merchant bought 7 pieces of cloth, each 27 yards, for £55. 12s.; and sold 56 yards at 5s. $3\frac{1}{2}d$. per yard and the rest at 6s. 8d per yard. Find his whole gain.

15. A merchant laid out Rs.693 in spirits which he bought at Rs.6.6a 8p. a gallon; he retailed it at Rs.8.4a. a gallon, making a profit of Rs.115.8a. How many gallons must he have lost by leakage?

182. Barter and Exchange.

When we barter we give or take one sort of goods in exchange for another of a different sort which is regarded as an equivalent. Hence, to find how much of the first sort be given in exchange for a fixed quantity of the second, we must first find the money value of the second sort and then find what quantity of the first sort is of equal value.

Ex. 1. How many pounds of tea at 3s. 2½d. a lb. must a grocer give in exchange for 35 yards of cloth at 12s. 4½d. a yard?

128. 4id.	594 <i>q</i> . 35	35. 2ĝ <i>a</i> . 12	154)20790(135
1484.	207909.	38d.	539 462
5949-		1549.	770
			770

... the number of lbs. of tea = 135. Ans.

Ex. 2. What weight of sugar at 3a. a lb. must be given in exchange for a chest of tea weighing 84 lbs. at Re.1. 9a. a lb. ?

Re.1. 9a. 250. 3)2100 16 84 2100a. 700 250%

.. the number of lbs. of sugar = 700. Ans.

Examples XLV.

1. How many dollars of 4s. 14d. each must be given in exchange for 4050 thalers of 2s. 111d. each?

How many francs of old, each will be given in exchange for 475 thalers at 2s. 114d. each?

How many lbs. of tea at Re.1. oa. 8\$ a lb. must be given in exchange for 46 yards of silk at Rs.4. 04. 25, a yard ?

4. A man exchanges 45 sheep at Rs.22. 14a. each and 37 pigs at Rs.36. 12a. each for 13 oxen at Rs.173. 4a. each, the difference being paid or received in money; how much does he pay or receive?

5. The Calcutta rupee is worth ts. 117d. each; how many must be given for £9895. 16s. 8d.?

6. How much coffee at 1s. told. a fb. should be given in exchange for 72ths, of tea at 3s. 4d. per lb.?

7. How many yards of cloth worth 3s. 7 d. a yard must be given in exchange for 144 vards worth 18s. 14d. a vard?

8. How many Rubles at 3s. 41d. each are equal in value to 378 Napoleons, at 15s. 93d. each?

9. What quantity of tea at Rs.2. 6a. 6p. per lb., must be given in exchange for 5 cwt. 2 qrs. of sugar at Rs.3. 154. per stone?

10. A person exchanged 18 dozen of wine for a gold snuff-box weighing 8 oz. 13 dwts. 10 grs. valued at £4, 10s. an oz. What did he value his wine at per dozen?

11. A gives B 98 gallons of brandy worth Ps. 12. 12a. a gallonand gets in return Rs.400, 8a, and 576 yards of cloth; what is the value of the cloth per yard?

12. A man sold 53 horses at Rs. 168. 11a. 4p. each, and with the money he received for them and Re.000 more he bought 355 cows and a certain number of calves; he gave for 198 of the cows Rs.22. 2a. a head, and for the rest of the cows Rs. 18. 6a. 8p. a head, and for the calves Rs. 14. 6a. a head. How many calves did he buy?

183. Allotment

By allotment we divide a given quantity in a certain way into a proposed number of parts and thus ascertain the actual amount of each parts

Ex. 1. How many sovereigns, half-sovereigns, crowns, florins, shillings, six-pences and three-pences, and of each an equal number are there in £67. 16.3 at?

Since every collection of one of each of these coins amounts to 3ks 9d.; therefore there will be as many coins of each kind as f(r). 16s. 3ds, contains 3ks, 9d. Hence the number of coins of each kind = 35. dns.

Ex. 2. An equal number of men, women and boys earned Rs.556. 8a. in 6 weeks; each man earned Rs.1. 2a. 8b. a day, each woman 10a. and each boy 6a. 8b; how many were there of each?

Rs.92 12 0 = earnings of 6 weeks. .. no. of each sort=6. Ans.

Examples XLVI.

- Divide £39 into four equal numbers of guineas, half-guineas, crowns and half-crowns respectively.
 An equal number of yold-moburs, rupees, eight-anna pieces.
- An equal number of gold-mohurs, rupees, eight-anna pieces, four-anna pieces, two-anna pieces and piec amount to Ks.447. 4a. 15s.; how many of each sort are there?
- 198: ; now many or each sort are there?

 3. An equal number of guineas, pounds, half-guineas, crowns, half-crowns and six-pences amount to £714; how many of each are there?
- 4. An equal number of rupees, half-rupees, quarter-rupees, two-anna pieces, double-paisas and paisas amount to Rs.803. 5a. 2/ps.; find the number of each.
- 5. At the end of a week £54. 3s is paid in wages to an equal number of men, women and boys; a man is paid 4s. 6d., a woman 3s 3d and a boy is 9d a day; how many of each class are there?
- Tithes of the value of £448. ros. are commuted for an equal number of bushels of wheat, barley and oats; how many bushels of

each kind will be received when wheat is sold at 7s. 2d. a bushel, barley at 4s. 9d., and oats at 3s. 5d.?

- Rs.750 is paid in wages at the end of the week to a certain number of men, twice as many women, and three times as many children, each man earns Rs.2. 1s. 4β, a day, each woman Rs.1. 6s. and each child Rs.1. 2s. 8β, ; how many children are there?
- 8. A bag contains a certain number of rupees, twice as many half-rupees, five times as many quarter-rupees, and eight times as many two-anna pieces, and the value of the whole sum in the bag is R3.272. Find the number of each.
- 9. One farm produced III times as much rice as another; both farms produced 1776 mds. 10 st.; how much did the smaller farm produce?
- 10. How many packets of tea of 1 fb. 8 oz. and 1 fb. 12 oz. respectively, an equal number of each, can be made out of a chest of tea, in which the tea weighs 1 cwt. 1 qr. 3 fbs.?

184. Mixtures.

When several articles of the same kind but of different qualities or value are mixed together to form a compound, it is called a mixture. The parts forming the compound are called ingredients or components of the compound.

(1) Given the quantity and price of each of the component parts, to find the price of the mixture.

Ex. 7. A mixture is made of 9 gallons of spirit at Rs.6. 4a. per gal., 16 gallons at Rs.9. 6a. and 90 gallons at Rs.11. 2a.; what is the value of a gallon of it?

The cost of 9 gals. = Rs.6. $4a. \times 9 = Rs.$ 56. $4a. \times 16 = Rs.$ 150. 0a.

Ex. 2. A man buys 16 lbs. of tea at Rs.2. 2a. per lb., 12 lbs. at Rs.2. 5a. 4\(\rho\) per lb., and 24 lbs. at Rs.2. 6a. 10\(\rho\) per lb. At what price per lb. must he sell the mixture, so as to gain Rs.35. 12a. on the whole?

, selling price per th = Rs.156 + 52 = Rs.3. Ans.

(2) To find the quantity to be added to a mixture under certain conditions.

£x. 3. A pipe of wine containing 126 gallons is bought for £112; how much water must be added to it to allow of its being sold at 17s. 6d. a gallon?

f.112=112×20×12d=26880d: 17s. 6d=210d

Now the quantity sold for £112 at 17s. 6d. a gal.=(26880+210) or 128 gallons.

.. the quantity of water mixed =(128-126) or 2 gallons. Ans.

Ex. 4. If a person gives Rs.556. &a. for 184 gallons of wine; nor much water must be added to it, if he wishes to sell it at Rs.2. 10a. a gallon and make a profit of Rs.36. 12a.?

The selling price of the mixture = Rs.556. 8a. + Rs.36. 12a. = Rs.593. 4a. = 9492a.

Also the selling price per gal. = Rs.2. 10a. = 42a.

the quantity sold=(9492+42) or 226 gallons.
the quantity of water added=(226-184) or 42 gallons. Ans.

Examples XLVII.

- A grocer mixes 40 lbs of tea at Re.1. 3a. a lb., 48 lbs. at Re.1.
 6p. a lb and 64 lbs. at Re.1. 9a. 10p. a lb.; find the value of 1 lb. of the mixture.
- 2. A grocer mixes 3 cwt. 24 fbs. of sugar at $6\frac{1}{2}d$, per fb. with 2 cwt. 64 fbs. at $4\frac{1}{2}d$: at what price per fb. must he sell the mixture so as not to lose by the sale?
- 3. A tea merchant mixes 25 lbs of tea at 14a. a lb., 40 lbs. at Re.1. 3a. 4p., and 27 lbs. at Re.1. 9a. 4p.; at what rate per lb. must he sell the mixture, so as to vain Rz.23. 2a. on the transaction?
- How many fbs. of tea-dust (which cost him nothing) must be put in the above mixture, to enable him to sell the tea at Re.t. 3a. 4p. per fb. and gain at the same time Rs.a. 4a. on the transaction?
- 5. A trader buys 756 cwt. of sugar at Rs.19. 7a. 8p. per cwt. with which he mixes 1921 cwt. of sugar which cost him Rs.21 per cwt. at how much per ib. must he sell the mixture in order to make a profit of Rs.7396. 1a. 4p.?
- 6. A grocer mixes 19 lbs. of tea at 1s. 10\(\frac{3}{2}d\) per lb., 26 lbs. at 2s. 3\(\frac{1}{2}d\) per lb., at at 5s. 6\(\frac{1}{2}d\) per lb.; at how much per lb. must he sell the mixture so as to gain \(\frac{1}{2}c\). 3s. 4d. on his outlay?
- 7. A spirit merchant mixes 26 gallons of wine at 12s. 3d. a gallon with 39 gallons at 13s. 4d. a gallon; how many gallons of water must he add to the mixture so as to sell it at 10s. 9d. a gallon?
- 8. A man bought 150 eggs at 2 a penny, 150 more at 3 a penny, and mixed them and sold the whole at 5 for 2d, how much does he lose?

- A grocer buys 4 cwt. of sugar at 6d. per lb.; and 8 cwt. at 41d. per lb. He sells 6 cwt. at 51d per lb.; at what rate per lb. must be sell the remainder so as neither to gain nor lose?
- 10. A merchant bought 84 gallons of whisky at Rs 8. 6a, a gallon, and sold it at Rs.8. 4a. a gallon, making a profit of Rs. 105. How many gallons of water did he add to the whisky?

185. Income and Expenditure.

Income including taxes and other rates is called gross income, but excluding these, it is net income. What a man lays by out of his income after meeting all necessary expenses, is called his savings.

Ex. 1. On the reduction of the income-tax from 9d. in the pound to 4d., a person saves £29. 15s. 10d.; find his gross income. £29. 15s. 10d. = 7150d. = savings.

He saves (9-4) or 5d. in every £ of his income.

., gross income required = £(7150+5) or £1430. Ans.

E.s. 2. A man has a yearly income of Rs.4867. 8a. and sets aside Rs.630 for charity, insurance and other purposes. What is the greatest sum he can spend per week, without getting into debt?

Rs. a. p. Hence we see that he may spend Rs. 8. 1. 7a. 10p. every week, and nave 8p. over at the end of the vear. If he

Examples XLVIII.

1. A man's annual income is Rr.10,000 and his daily expenses are Rs.18. 10a. 4b.; how much does he save in 9 years?

 A man's income in the year 1895 was Rs.5250, out of which he saved Rs.1691. 4a.; what was his average daily expenditure?

he saved KA 1091. 4a; what was his average daily expenditure?

3. A man spends Rs. 105. 14a in a week; how much does he spend in a year of 365 days?

4. If a person spends in 4 months, as much as he earns in three, how much can he lay by annually, supposing that he earns Rs.2505, every 6 months?

b. What annual income would enable a person to spend 8s. 9d. a day and save £7. 16s. 10½d., every calendar month?

 If a person has an income of £535. 17s. 6d a year, and he spends daily £1. 3s. 10½d, how much will he save at the end of the year?

7. Find the salary of a person who pays £7. 9s. 4d. income-tax, when the tax is 7d in the pound.

8. A person after paying an income-tax of 46. in the rupec, has 18.8567. 11a. 4p. remaining; find his gross income.

9. If a person's yearly income be £65, 12s, 6d, and he lay by £10 a year, how much does he spend per day?

10. A person has an income of Rs.6706. 12a. 6p., and for the first 7 months he spends on an average Rs. 588. 6a. 6p. a month; how much must be spend during each of the remaining 6 months, so

186. Division of money.

as not to run into debt?

When a given sum of money is divided among a number of persons in a proposed way, the amounts they severally receive are called their respective shares.

Ex. 1. Divide £16. 5s, 6d among A, B and C, so that A may have £1. 2s. 6d. more than B, and B 16s. 9d. more than C.

Now, if we take away these sums, to be subsequently given to B and A respectively, their shares will be equal to that of C.

Hence we have

Now, 1+2+4=7;

., A's share = £6. 9s. 1d.; B's share = £5. 6s. 7d.; and C's share = £4. 9s 10d.

Ex. 2. Divide Rt.117, 11a, among A, B and C, so that A may receive twice as much as B, and B twice as much as C. 7) Rs. 117. 11a.

If C's share is 1, B's share is 2 and A's share is 4.

$$Rs. 16. 13a$$
.

**C's share = Rs.16. 13a.

**B's share = Rs.16. 13a. × 2 = Rs.33. 10a.

Ans. 4's share = Rs.16. 13a. × 4 = Rs.67. 4a.

Ex. 3. Divide Rs.2415 among A, B and C in such a way that for every Rs.20 that A gets, B gets Rs.15, and C gets Rs.11; how much does each receive?

$$20+15+11=46$$
; 46 $\frac{RR.2.415}{Rs}$, $52.8a$.
•• A's share= $Rs.52$. $8a$. $\times 20=Rs.1050$
B's share= $Rs.52$. $8a$. $\times 15=Rs.787$. $8a$
and Cs share= $Rs.2a$. $8a$. $\times 11=Rs.787$. $8a$

Examples XLIX.

1. Divide Rs.24. 9a. 4p. among A, B and C, so that B may have Rs.3. 5a. 4p. more than A, and C's share may be double of B's.

2. Divide Rs.73. 4a. 6p. between two men so that one may receive as much again as the other.

3. Divide Rs.1845. 9a. 6p. equally among 39 persons; and supposing 15 of them to have received their portions, and of the rest only 21 to appear; how much might be given to each of these?

 Divide £20. 2s 6d. into two sums of money, one of which contains as many half-crowns as the other contains shillings.

5. Divide Rs.24515 among A, B and C, so that A may have Rs.1786, 12a, more than B, and C Rs.2257. 5a, less than B.

6. Divide Rs. 2509. I4a among A, B and C, so that B may receive 3 times, and C 5 times, as much as A.

receive 3 times, and C 5 times, as much as A.

7. Divide £189. 5s. 7½d. among 3 men, so that one of them may have 15 guineas more than either of the other two.

8. A purse and the money it contains are worth Rs.19. 4a., and the money is rotimes the value of the purse; how much does the purse contain?

 Divide Rs.690 between A, B and C, so that where A receives Rs.10, B may receive Rs 30, and where B receives Rs.20, C may receive Rs.50.

10. The sum of Rs.473. 6a. 45. has to be divided among 5 persons, so that the first has 20 shares, the second 17, the third 12, the fourth 8, and the fifth 5; how much will each receive?

11. Divide £119. 16s. 3d. among 36 persons, in such a way that 17 of them may each receive 18s. 9d. more than each of the rest.

12. Divide Rs.68427. 34. 4\$\psi\$, among 3 persons, so that the first shall have Rs.5687. 24. 8\$\psi\$, more than the second, and the second Rs.7289. 14. 4\$\psi\$, more than the third.

187. Men, Women and Boys.

Ex. 1. Divide Rs.156. 4a. among 7 men, 9 women and 11 boys,

so that each man may receive three times as much as a boy, and each woman twice as much as a boy.

The 7 men will receive as much as 7×3 or 21 boys and the 9 women as much as 9×2 or 18 boys; therefore 7 men, 9 women and 11 boys will receive as much as 21+18+11 or 50 boys. Thus,

Hence a boy's share = Rs.3 2a.,

a woman's = Rs.6. 4a., and a man's = Rs.9. 6a.

Ex. 2. A man and a woman together have Rs.40, 6a. 8p, a woman and a boy together have Rs.30, 8a, a man and a boy together have Rs.35, 7a. 6p.; find how much a man, a woman and a boy together have.

Here, adding the three given items, we have

twice a man's money+twice a woman's money+twice a boy's money = Rs.40. 6a. 8p. + Rs.30. 8a. + Rs.35. 7a. 6p. = Rs.106. 6a. 2p.

∴ a man +a woman +a boy together have Rs. 106. 6a. 2p. +2 =Rs. 53. 3a. 1p. Ans.

Examples L.

 Divide £2. 10s. 10½d. between 3 men and 2 women, giving to each of the men 3 times as much as to each of the women.

2 A gentleman divided Rs.103. 2a. among 12 men, 16 women and 30 children; he gave to each man twice as much as to each woman, and to each woman three times as much as to each child. What did each woman receive?

3. Divide Rs.3993. Sa. among one man, one woman and 15 boys, in such a way that the man's share is 10 times, and the woman's share 3 times as much as that of each boy; what is the value of the share of each?

4. Divide Rs.5501 9a. among 4 men, 6 women and 8 boys, giving to each man double that of a woman and to each woman

triple that of a boy.

5 Divide £15. 6s. among 12 men, 17 women and 26 children, in such a way that a man shall receive 3 times as much as a child and a woman twice as much as a child; what does a woman receive 9 6. Divide Rs 1151. 4a. among 20 women and 25 men, so that

each woman may receive Rs.7. 8a. more than each man; how much will each woman receive?

7. If 20 men, 40 women and 50 children receive Æx.3500 among them for 7 weeks' work and 2 men receive as much as 3 women or 5 children, what sum does a woman receive per week?

8 The weekly wages at a mill amount to Rs. 1862. In the mill a certain number of women are employed at Re. 1. 6a. 8b. a day, five times as many men at Rs. 2. 12a. a day, and 6 times as many boys at Rc. 1. 2a. 8b. a day; how many men are employed?

A and B together have Rs.48. 14a. 9p., B and C together have Rs.45. 10a. 6p., A and C together have Rs.54. 8a. 11p.; how much has C?

10. A goat and a lamb are together worth Rs.6. 10a., a goat and a calf are together worth Rs.10. 4a. 8\hbeta, i and a calf and a lamb are together worth Rs.8. 5a. 6\hbeta.; find the price of a goat, of a lamb and of a calf.

Examples worked out.

Ex. 1. A man has a certain number of pice, twice as many twoanna pieces, three times as many four-anna pieces and four times as many rupees. If the total amount be Rs.501. 9a., find the number of coins of each kind.

Here, 1 pice +2 two-anna pieces +3 four-anna pieces +4 rupees =(1+16+48+256) pice = 321 pice; and Rs.501. 9a = 32100 pice.

... the number of pice=(32100+321) or 100.

Hence, no. of two-anna coins = $2 \times 100 = 200$; the no. of four-anna coins = $3 \times 100 = 300$, and the no. of rupees = $4 \times 100 = 400$. Ans.

Ex. 2. A man died on June 2 Monday, 1890, having lived 23025 days exclusive of the day of his death. Find the day and date of his birth.

A year = 305 days; therefore 23025 days \div 305 = 63 years 30 days. Now in these 63 years, 16 are leap years (which = 366 days); therefore 23025 days = 63 years \div (30 - 16) days or 63 years 14 days.

Again, 1890-63=1827, and reckoning 14 days backwards from fune I, we come to May 19.

Hence the man was born on May 19, 1827.

Now 23025 divided by 7 gives a remainder 2; therefore he was born on Saturday, reckoning 2 days backwards from Sunday.

Ex. 3. The total expenses of a family when rice is at Rs.4 per maund are Rs.5; when rice is at Rs.3, 12a, per maund, they are Rs.52. 8a. (other expenses remaining the same); find his total expenses when rice is at Rs.4, 4a. per manud.

Here, a decrease of (Rs.4-Rs.3.12a.) or 4a. per md. in the price of rice makes a decrease of (Rs.55-Rs.52.8a.) or Rs.2.8a. = 40a. in the family expenses.

Hence, quantity of rice consumed by the family = $\frac{49}{4}$ or 10 mds. Therefore the expenditure on rice = $Rs.(4 \times 10)$ or Rs.40 and the other expenses = Rs.(55-40) = Rs.15.

Now, the price of 10 mds. at Rs.4. 4a. per md. = Rs.4. $4a \times 10 = Rs.42$. 8a.

Hence, the required expenses=Rs.42. 8a.+Rs.15=Rs.57. 8a.

Ex. 4. A corn-merchant mixed 10 mds, of rice worth Rs.4 per md. with a certain quantity worth Rs.3, 8a, per md., and selling the mixture at Rs.3, 12a, per md. gained Rs.10 on the whole. How many mds. of the second kind did he mix?

By selling the first sort of rice at $Rs._3$. 12 α , per md. he incurs a loss of $(Rs._4-Rs._3$. 12 α .) or 4α . per maund; therefore the loss in 10 mds. $-10 \times 4\alpha$. $=40\alpha$. $=Rs._2$. 8α .

Now, gain per md. on the second sort=(Rs.3.124.-Rs.3.8a.) = 4. and as he shall have to make altogether Rs.10+Rs.2.8a. or Rs.12.8a. = 2004.

... the quantity required == 2 no or 50 mds. Ans.

Ex. 5. A gowala mixed milk worth Rs.7 per md, with twice as much worth Rs.5, 8a, per md, and having sold the mixture at Rs.6, 4a, per md, cleared Rs.10, 8a, on the whole. How much did he mix of each sort?

The cost of 1 md. of first+2 mds. of second = $Rs.7 \times 1 + Rs.5$ 8a. $\times 2 = Rs.18$.

... the cost of 1 md. of the mixture $= Rs.18 \div 3 = Rs.6$. The gain per md. = Rs.6. + 4a - Rs.6 = 4a, and the tot

The gain per md.=Rs.6. 4a.-Rs.6=4a. and the total gain is Rs.10. 8a.=168a.

... the whole mixture contains 144 or 42 mds.

Now, 1+2=3; quantity of first sort=42+3=14 mds.

and second =14×2=28 mds.

Ex. 6. A supply of water suffices for 60 days if 10 mannds leak

off every day, but only for 55 days if 15 maunds leak off daily. Find the total quantity of water in the supply.

In the first case 60×10 or 600 mds. leak off altogether, while in the second 55×15 or 825 mds. leak off.

., for (60-55) or 5 days' use (825-600) or 225 mds. of water are required.

., for daily use (225+5) or 45 mds, of water are required.

Now, taking the first case, we find that the supply lasts for 60 days; and in that time (60×45) or 2700 mds. are required for use; and 60×10 or 600 mds. leak off.

Hence the total quantity reqd. = (2700 + 600)mds. = 3300 mds. Ans. Ex. 7. On changing 3 four-anna pieces, I received 36 coins in single and double piec. How many did I get of each?

Here 3 four-anna pieces=12a = 48 pice.

18s. Ans.

Now had all been single pice, I would have received 48; but as I received (48-36) or 12 single pice less, and the difference between a double and a single pice is one pice,

... the number of double pice=12 and ... single pice=36-12=24
$$Ans$$
.

Ex. & A man has three estates, and his incomes from the second and third are respectively twice and thrice as much as from the first. He has to pay an income-tax of 8 pies in the rupee for the first, ai, in the rupee for the second, and i.a. 4p. in the rupee for the third. If the total income-tax be Rx80, how much income does each estate vield?

Supposing his income from first to be Re.1, his income from second = Rs.2, and from third Rs.3.

Also, for the first he should have to pay (1×8) or 8 % in the Re. ... second ... (2×12) or 24 % in the Re. ... third ... (3×16) or 48 % in the Re.

.*, the total tax amounts to (8+24+48) or So pies in the rupee. Also $Rs.80 = (80 \times 16 \times 12)$ pies, the total tax.

Hence, income from first= $Rs.(80 \times 16 \times 12 + 80)$ =Rs. 192

of all the numbers that can be formed by different arrangements of the digits 2, 4 and 7 taken all together; and B gave A as many six-pences as is expressed by the sum of all the numbers that can be formed by different arrangements of the figures 4, 5, 8 and 9 taken all together. Who is the gainer and by how much?

The sum of all the numbers that can be formed by different arrangements of the digits 2, 4 and 7 taken all together = $2 \times (2+4+7) \times (10^2+10+1) = 2 \times 13 \times 11 = 2886$. [See Ex. 9, Page 70.]

Similarly, the sum of the numbers formed by the different arrangements of the digits 4, 5. 8 and 9 taken all together= $6\times(4+5+8+9)\times(10^3+10^2+10+1)=6\times26\times1111=173316$.

Hence A gave B 2886 sov. or £2886, and B gave A 173316 six-pences or £4332. 18s.

Therefore A is the gainer by (£4332. 18s. -£2886) or £1446.

Miscellaneous Examples II.

- 1. From 261 times Rs.352. 1a. 4p. take Rs.90892. 8a. and divide the remainder by 89.
- 2. How many Napoleons of 15s. 94d. each can be obtained for 5685 thalers of 2s. 114d. each?

- 3. How many Nobles are equivalent to £195. 13s. 4d. ?
- 4. 13 rupees, 9 half-crowns and 17 three-penny pieces amount of £2, 16s.; find the value of a Rupee. Find the value of a lac of rupees in English money. (1 lac=1,0,0,00.)
- 5. A dealer bought 9 horses at Rs.118. 13a. 42. each; one died and the others he sold at a profit on each of Rs.21. 1a. 82. Find his gain.
- 6. The value of a mark being 13s. 4d., and that of a moidore 27s., shew that there are twice as many farthings in 57 marks and 57 moidores, as there are drams in 1 cwt. 3 qrs. 19 lbs. 8 oz. 8 drs. of sugar.
 - 7. To a certain stock-in-trade A and B together contributed R.2.2. 10 α . B and C together Rs.2.5. 8 α . and A and C together Rs.2.7. 6 α .; how much did each contribute?
 - 8. A boy receiving 4a. per week has 2a. stopped every third week; if there are 39 weeks in a school year, how much does he realize in 4 years?
 - 9. A has Rs.1002. 7a. 8p. and B 128786 pies; if A receive from B 22222 pies and B from A Rs.115. 15a. 6p., how much will A have more than B.
 - 10. Of 21 people 13 lose Rs.1163. 13a. 6β. each and 8 lose Rs.930. ta. 9β. each. What is the average loss per man?
 - 11. A and B having an equal share in a heap of potatoes containing 86 maunds, A takes 24 mds. and B the rest, paying A Rs.27. 11a. 45. What is the worth of a maund of potatoes?
 - 12. A grocer's bill amounts to Rs.1897. 8a. It happens to be made up of equal sums for tea at Re.1. 14a. 8b. per seer, sugar at 4a. per seer, rice at 3a. per seer, and coffee at 11a. per seer. How many seers are there of each sort?
 - 13. A person mixes together 10 fbs. of tea at Re.1. 4a. per fb., 12 fbs. at Re.1. 6a. and 14 fbs. at Re.1. 8a. per fb. He reserves 6fb. of the mixture for himself and sells the remainder at Re.1. 13a. per fb. How much does be gain?
 - 14. A manufacturer employs 50 men and 35 boys who work respectively 12 and 8 hours a day during 5 days of the week, and half the time the other day; each man receives 4a, and each boy 1a. 4p, an hour. What is the whole amount of wages for a year?
 - 15. What quantity of water must I add to a pipe of wine which costs Rs.900, to reduce its price to Rs.5 a gallon?
 - 16. The yearly expense of a school is Rs.18993. 11a.: there is an endowment yielding Rs.4850. 15a. and subscriptions Rs.743. The rest is to be made up by the fees of the pupils of whom there are 217; what must each of them pay on an average?

- 17. In what time will a tradesman, who gains 10a. 8p. a day and spends 5a. of it, be able to pay off a debt of Rs.208. 9a. 8p.?
- 18. A man's weekly income is R.18. 7a and his quarterly expenditure is K.182. How much will he save at the year's end? (a year = 52 weeks.)
 - 19. I buy 80 lbs. of black tea at Rs.2. 2a. per lb. and 20 lbs. of green at Rs.2. 12a. per lb. and mix them; at what rate must I sell the mixture so as to gain 1a. 4p. in the rupee?
- 20. Divide two fields, one of 6 ac. 3 po. 13 sq. yds., the other of 4 ac. 37 po. 27 sq. yds., between A, B and C, so that A's no. of ro. = B's no. of sq. po. = C's no. of sq. yds.
- 21. September 17, 1893, was Sunday. What day of the week was September 17, 1891?
- 22. A wine merchant bought 2 pipes of wine at £2. 135. 4d. per gallon. How much water must he mix with it that by selling a gallon of the mixture for £2. 6s. 8d., he may gain on the whole £14?
 - 23. A factor bought 25 pieces of cloth for Rs.185000 at Rs.4 100. per yard. How many yards are there in each piece?
 - 24. A house and its furniture are together worth £3367. 28. 6d.; the house is worth 8 times the furniture. What is the house worth?
 - 25. A man's total expenses are Rs.44, when rice sells at Rs.2. Sa. per maund, and Rs.46. 4a. when rice sells at Rs.2. 11a. per md. What are his expenses when rice sells at Rs.3. 3a. per maund?
- 28. Two persons buy mangoes at 16 per rupee; one sells at 12 per rupee and the other 16 for Re.1. 4a. How much profit does one make more than the other?
- 27. A man spending daily Rs.2. 10a. 6p. lays by Rs.150. 2a. 11p. in the year 1897; find his daily income.
- 28. I received 320 pieces in half-rupees and quarter-rupees in exchange for 100 rupees. How many of each did 1 get?
- 29. A and B gave equa sums in buying 15 horses and 22 cows. A took 5 horses and 17 cows and B the rest. If a horse cost Rx.56, 8a, and a cow Rx.35, 10a, how should they settle the account?
- 30. A man was born on the 15th of May 1762, and died on the 17th of June 1825. How many days did he live, exclusive of the day of his death?
- 31. A goldsmith manufactured 2 fbs. 3 dwts. 8 grs. of gold into rings, each containing 9 dwts. 16 grs. : he sold the rings at Rs.25 each ; how much did he receive for them?
- 32. A piano, table and carpet cost Rs.632. 12a.; the piano and table cost Rs.547.6a., and the table and carpet cost Rs.260. 2a. 84. Find the price of each.

- 33. A grocer buys 40 lbs, of tea at Rc.1. 12s. per lb, and also some cheaper tea; he mixes the two kinds of tea and by selling all the tea for R.2.26, 4s. at Rc.1. 11s. per lb. gains Rs.22. 14s. 8b. on his outlay; how many lbs. of the cheaper tea does he buy, and at what price per lb.?
- 34. Twice A's money = 3 times B's money, and the difference of their moneys is Rs.12. 10a. How much has each?
- 35 A bag contains a certain number of rupees, twice as many half-rupees, 4 times as many quarter-rupees and 8 times as many two-anna pieces, and total amount in the bag is Rs.100. How many of each are there?
- 38. A, B and C contributed equal sums in purchasing 23 horses, 38 cows and 56 sheep. A took 7 horses, 90 cows and 19 sheep. A took 7 horses, 90 cows and 19 sheep, and C the rest. If the price of a horse be Rx68 8a, of a cow Kx44 too. and of a sheep Rx7. 5a, which of them shall have to pay and which to receive, and how much?
- 37. A landowner has three estates. The first estate yields an income of Re2000, the second Re2000 and the bird Re2000. If the rate of tax he 1a in the rupee for the first, 1a. 4b. in the rupee for the second and 1a. 3b, in the rupee for the third, how much tax has he to pay altogether?
- 38. Divide Rs.7890 among A, B and C in such a way that A may receive Rs.125 more than twice as much as B, and C Rs.230 more than thrice as much as B.
- 39. A certain weight of gold worth Rs. ao. 14a. 6¢, per tola is mixed with an equal weight worth Rs. 18. 6a. 6¢, per tola. Determine the weight of gold, so that by selling the mixed gold at Rs. 19. 14* 6¢. per tola, a goldsmith may clear Rs. 12. 8a. on the whole.
- 40. In making 50 benches, the cost of each for wood is Re.1. 2a., for labour 13a, for polish 2a. and for screws 1a. How much is gained on each bench by selling the whole lot for Re.112. 8a.?
- 41. The 15th of May 1890 was Thursday. What day of the week was the 27th April 1790?
- 42. The cost of maintaining a family is Rs.122. & a when milk sells at 2a. per seer, and Rs.125. 12a. when milk sells at 2a. 3b. per seer. Find the monthly consumption of milk in the family and the amount of other expenses, supposing the latter to be unchanged.
- 43. A besieged garrison has a supply of water for 50 days. Owing to a leak, however, in the bottom of the reservoir, 5 galloos waste every day, and then the supply suffices for ten days less. Find for how many days the supply would suffice if 20 gallons leak off every day.

- 44. A gowala mixes 12 mds. 16 sr. of milk at Rs.6. 9a. per md with 22 mds. 24 sr. at Rs.7. 8a. per md. He then adds 1 md. 20 sr. of water and sells the mixture at 6 seers per rupee. How much does he cain or lose?
- 45. Divide Rs.10256. 12a. among three men, so that the first shall get Rs.1251. 4a. more than the second, and Rs.152 less than the third.
- 46. 8 men, 16 women and 24 boys earned Rs.136 in 8 days. A woman earns daily 22 more than a boy, and a man daily earns as much as a woman and a boy together. Find how much a man, a woman and a boy daily earn.
- 47. If 50 pieces of coin consisting of single and double pice make up a runee, find the number of each coin.
- 48. A man died on the 7th August, Thursday, 1890, having lived 21000 days (exclusive of the day of his death). Find the day and date of his birth.
- 49. A certain English landowner has three estates, for which he has to pay a total tax of £180. His income from the second and third estates are respectively twice and four times his income from the first. The rates of tax for the three are respectively 1s. 2d, 1s. 3d, and 1s. 4d, in the £. Determine his income from each estate.
- 50. A pays B as many rupees as is expressed by the sum of the numbers formed by all the different arrangements of the figures 2, 3 and 4 taken all together, and B pays A as many double pice as its expressed by the sum of the numbers formed by the figures 1, 2, 3 and 4 taken all together and arranged in all possible ways. Who shall be the gainer and by how much?
- 51. Divide R.51. to a among 8 boys, 4 women and 3 men in such a manner that a woman shall receive 2a more than twice as much as a boy, and a man 4a more than as much as a boy and a woman together.
- 52. A man died on the 1st of August, Friday morning, 1890 He had lived 10000 days. Find the date and day of his birth.
- 53. Divide Rs.1780, 13a. into three such parts that the first part shall be Rs.125, 3a. more than the sum of the second and third, and the second part Rs.17, 12a. more than the third.
- 54. If the monthly expenditure of a family be Rs.57. &a., when rice is at Rs.4. &a. per maund and Rs.58, when rice is at Rs.4. &a. per maund; what should the expenditure be when rice would be at Rs.4. 12a. per maund?
- 55. What sum of money is that which being multiplied by 16, Rs 24 added to the product, the sum divided by 13, and Rs.3. 13a. added to the quotient, the sum is Rs.7. 13a. ?
 - 56. An equal number of men, women and boys together earned

Rs.62. 8a. in 5 days. A boy earns 2a, a woman 3a and a man 5a. daily. Find the number of boys.

57. A goldsmith mixes a certain number of tolas of gold worth Rs.20. 8a per tola with twice that quantity worth Rs.19. 6a. per tola. On selling the mixed gold at Rs.20 per tola, he gained Rs.15. How much of each kind did he mix?

58. Sound travels at the rate of 1142 ft per second; what is the distance of a thunder cloud when the sound of thunder follows the flash of lightning after an interval of 9 seconds?

59. A gives B 112 gallons of brandy at 32s. 6d. a gallon, and recives in return £40. 12s. 6d. and 780 yds. of cloth. What is the price of the cloth ber yard?

60. There are 6 presses at work striking off sovereigns, half-sovereigns, florins, shillings, six-pences and four-penny-pieces respectively, and each at the rate of 2500 per hour; find the value of the money struck off in 13 days of 9 hours each.

61. What is the difference in seconds between the Mahomedan year of 354 days 8 hrs. 48 min, and the Hindu year of 365 days 6 hrs. 12 min, 30 sec. ?

62. If 6 hats cost as much as 25 pairs of gloves, worth Re.1 10a. a pair, how many hats can be bought for Rs.616. 2a. 4φ.?

63. If telegraph posts are placed 66 yards apart and a railway train passes one in every three seconds, how many miles an hour is the train running?

64. A person observed the flash of a cannon 7 seconds before heard the report; how far was the cannon distant, supposing that sound moves at the rate of 1142 ft. per second?

65. In how many days of 8 hours each will a person be able to count to lacs of rupees at the rate of 80 per minute? How many will remain to be counted on the morning of the 26th day?

66. How much water must be mixed with 30 seers of milk worth 2a. per seer, in order to reduce its price to 1a. 6p. per seer?

67. By the payment of 2s. 1d in London a banker will give credit at Calcutta for a rupee; how many rupees may be received in Calcutta for the payment of £5025. 5s. 3d. in London?

68. If 5 oz of silk can be spun into a thread 2 fur. 20 po. long; what weight of silk would supply a thread sufficient to reach to the Moon, if the distance be 240000 miles?

69. A ship's crew of 50 men have a supply of water for 30 days at 2 seers a head; if they lose 125 seers, and find that they will be 50 days at sea, what must be each man's daily allowance?

70. A landowner has four estates, for which he has to pay a tax of Rs.760. The second, third and fourth yield respectively twice,

thrice and four times as much income as the first 1f the tax be levied at 10, 9, 8 and 6 pies in the rupee respectively, find the amount of his income from each extent

- 71. A tradesman in India exchanges with a merchant in China a many maunded of sougar as is expressed by the saum of all the numbers that can be formed by the different arrangements of the digits 7,8 and 9, taken all together, for as many pounds of tea as is expressed by the saum of all the numbers similarly formed by the land of the same of the same
- 72. A man's monthly expenditure consists of 5 mds. of rice, md. 20 sr. of flour, 15 sr. of plee and 2 mds. 15 sr. of milk. When rice costs A2,3 nos. 64, per md., flour R2.4, 122, per md., ghee R2.3, R2.4, 123, per md., ghee R2.3, R2.4, 124, 125, 126, 126, per md., of the articles remain the same, what would bis family expenses amount to, when rice would sell at R2.4, 126, R2.4, 126, and milk at R2.6, 42, per mand?
- 73. A total weight of 12 mds. to sr. consists of a certain number of 10 seer-weights, three times as many of 5 seer-weights, 4 times as many of 1 seer-weights, 5 times as many of 1 seer-weights, 6 times as many of mail seer-weights and 16 times as many of powaweights. Find of half seer-weights and 16 times as many of powaweights. Find the number of each kind of weights.
- 74. A certain number of sovereigns, twice as many crowns, 5 times as many half-crowns, 8 times as many shillings and 12 times as many six-pences together amount to £28.5s.; find the numbers of each coin.
- 75. A man mixed 3 mds of milk at $R_{2,4}$ &a per md, with a certain quantity worth $R_{1,4}$ 4a. per md, and three times that quantity worth $R_{3,2}$ 12a per md. He sold the mixture at $R_{4,1}$ 2a, per md. and thus cleared $R_{5,1}$ 5 on the whole. How much of the second and third sort did he mix?

CHAPTER IV.

Numbers, Measures and Multiples.

1. NUMBERS.

188. Numbers which follow a regular order increasing by I are called consecutive numbers. The consecutive numbers commencing at I are called natural numbers.

Thus, 4, 5, 6, 7, 8, &c. are consecutive, and 1, 2, 3, 4, 5, 6, &c. are natural numbers.

189. Numbers are either even or odd.

Numbers are called even when they can be divided by 2 without a remainder, and odd when they cannot be so divided.

Thus, 4, 8, 10, 16, &c. are even and 3, 5, 7, 13, &c. are odd numbers.

190. A measure or factor of a number is any number which divides it without a remainder. It is said to measure the number by the units contained in the quotient.

Thus, 4 is a measure or factor of 24, because it is contained exactly 6 times in 24. All numbers have 1 for a measure.

191. An aliquot part of a number is any measure of it.

Thus, 4 is an aliquot bart of 20, for 4 is a measure of 20,

192. A multiple of a number is any number which contains it an exact number of times.

Thus, 108 is a multiple of 12, because 12 is contained exactly 0 times in 108.

193. A measure is sometimes called a submultiple.

Thus, 4 is a submultible of 16.

194. Numbers are either prime or composite.

A prime number, or a prime, is a number which can be divided exactly only by itself and by unity. A composite number is a number which can be separated into factors each greater than unity, or which, in other words, arises from the multiplication of two or more other numbers, termed factors.

Thus, 2, 5, 7, 11, &c. are primes, and 4, 8, 10, 12, &c. are composite numbers.

posite numbers.

195. Two numbers are prime to each other, when their only common measure is I.

196. One number is divisible by another when it can be divided by that other number exactly.

ded by that other number exactly.

Thus, 20 is divisible by 5, for 20 contains 5 exactly 4 times.

197. The following RULES are important, and should be carefully committed to memory.

(1) If a number divide a product of two factors and be prime to one of them, it must divide the other.

Thus, if 4 divide 9 x 24, and 4 is prime to 9, then 4 must divide 24, for 4 is a measure of 24.

(2) If a number is divisible separately by two others which are prime to each other, it is divisible by their product.

Thus, if 240 be divisible by 3, and by 4, where 3 and 4 are prime to each other, it will be divisible by 3×4 , for $240=(3\times4)\times20$.

(3) If one number is divisible by another, any multiple of the first is also divisible by the second.

Thus, 10 is divisible by 2 and 5; hence any number ending with 0, being a multiple of 10, is divisible by 2 and 5.

100 is divisible by 4 and 25, therefore all numbers ending with two ciphers are divisible by 4 and 25.

1000 is divisible by 8 and 125; hence all numbers ending with three ciphers are divisible by 8 and 125.

Again, 1001=7×11×13, and therefore 1001 is divisible by 7, 11, and 13. Hence all numbers like 7007 or (7×1001), 18018, or

(18×1001), 325325 or (325×1001) are all divisible by 7, 11 and 13.

(4) If each of two numbers is divisible by a third, their sum or

difference is also divisible by the third.

(5) If each of two numbers is divisible by a third, then the sum or difference of any multiple of the first and of any multiple of the second is also divisible by the third.

Thus, 627 = 600 + 20 + 7 = 6(99 + 1) + 2(9 + 1) + 7

=6×99+2×9+6+2+7;

.. 627 is divisible by 3, if 6+2+7 is. 7362=7000+300+60+2=7(900+1)+3(90+1)+6(9+1)+2

=7×999+3×99+6×9+7+3+6+2;

.. 7362 is divisible by 9, if 7+3+6+2 is. 82654 = 80000+2000+600+50+4

=8(9999+1)+2(1001-1)+6(99+1)+5(11-1)+4 $=8\times9999+2\times1001+6\times99+5\times11+8-2+6-5+4$;

.. 82654 is divisible by 11, if (8+6+4)-(2+5) is.

(for 9999, 1001, 99 and 11 are all divisible by 11.)

Criteria of Divisibility.
 A number is divisible by

2, if its last digit is divisible by 2; as 450, 326.

3, if the sum of the digits is divisible by 3; as 267, 531.

4, if its last two digits are divisible by 4; as 600, 520, 924.

5, if its last digit is o or 5; as 370, 865.

6, if it is divisible by both 2 and 3; as 318, 588.

8, if its last three digits are divisible by 8; as 3000, 5240, 2816.

9, if the sum of its digits is divisible by 9; as 648, 702.
10, if its last digit is 0; as 4570, 2300.

11, if the difference between the sum of its digits in the odd and in the even places is 0, or is divisible by 11; as 1007, 2695, 19613.

12, if it is divisible by both 3 and 4; as 708, 1164.

For 7 and 13, see Art. 197 (4).

199. There is no direct method for determining primes, and

				mon rec		
I II 29 47	71	97	113	149	173	197
2 13 31 53			127	151	179	199
3 17 37 59	79	103	131	157	181	211
5 19 41 61	83	107	137	163	191	223
7 23 43 67	89	109	139	167	193	227

200. To ascertain what numbers are brime.

(i) Every number whose last digit is o, 2, 4, 6, or 8 is divisible by 2(Art. 198), and therefore every such number except zitself is not a prime. Every number whose last digit is o or 5 is divisible by 5, and therefore every such number except 5 itself is not a prime. Hence the last digit of every prime number except 2 and 5, must be 1, 3, 7 or 9.

(ii) If then the last digit of the given number be 1, 3, 7, or 9 try as divisors one after another the primes 3, 7, 11, 13, &c. ; if there is a remainder in each case the given number is a prime. It is not necessary to try a divisor whose square is greater than the given number.

Ex. Are 689 and 947 primes?

(1) 689 is not divisible by 3 (for 6+8+9=23), nor by 7 (by trial), nor by 11 (for 6+9-8=7), but is divisible by 13; therefore 680 is not a prime.

(2) 947 is not divisible by 3, 7, 11, 13, 17, 19, 23 or 29; and we need not try the next divisor 31, for the square of 31 is greater than 947. Hence 947 is a prime.

201. To resolve or decompose a composite number into its prime factors is to find those prime numbers which when multiplied together produce the given number.

Thus, 210=2×3×5×7; 504=2×2×2×3×3×7=23×32×7.

202. When the factors obtained are all primes, the number is said to be resolved or decomposed into its prime or elementary factors.

203. No number can be resolved into prime factors in more than one way.

204. To resolve a number into its prime factors.

RULE. Divide in succession by each of the primes 2, 3, 5, 7, 11, &c., which can be used as divisors, and in each case as often as

possible, until we obtain a quotient which is a prime; these divisors and the last quotient expressed in the form of a product make up the given number.

Ex. 1. Resolve 44856 into prime factors.

 $2^3 = 8)44856$ The last two digits form 56, which is divisible $3^2 = 9)5607$ by 8; the sum of the digits $=4+4+8+5+6\approx 37$. Hence the number is divisible by 8 and 9 or 23 71623 and 32.

Also 623=7 x 80, and that 80 is a prime. .. 44856 = 23 × 32 × 7 × 80.

Ex. 2. Decompose 8862777 into its prime factors.

The sum of the digits=45, which is divisible by $3^2 = 0)8862777$ $3^2 = 9)984753$ 9 or 32; the sum of the digits of the quotient=36; also (8+6+7+7)-(8+2+7)=11. Hence the 11)109417

number is divisible by o. 9 and 11. 7)9947 Again, in 9947, we have 947-9=938, which is 7)1421

divisible by 7; in like manner, again by 7, and 203 7)203 =7 x 20 and 20 is a prime. 20

.. \$862777 ≈ 9 × 9 × 11 × 7 × 7 × 7 × 29 = 34 × 11 × 78 × 29.

Examples LT.

- Resolve mentally the following into elementary factors:
- (1) 6; 10; 14; 21; 35; 28; 45; 64; 81; 96; 72. (2) 56: 30: 280: 144: 224: 285: 198: 176: 342.
- 2. Decompose the following numbers into their prime factors :-
- (1) 320; 460; 462; 315; 612; 715; 846; 945; 735.
- (2) 1188; 1309; 1827; 1331; 1456, 1485; 3675; 4620. (3) 5250; 55020; 16632; 47089; 53599; 88725; 11025.
- (4) 514250; 190463; 259811; 508079; 4149173; 4057690.
- (5) 7507500 : 73896433 : 11176704 : 119180070 : 125023500.
- 3. Ascertain which of the following numbers are prime, and the
- prime factors of those which are composite :-(1) 31; 53; 86; 96; 167; 132; 275; 480; 856; 873.
 - (2) 397; 289; 461; 727; 667; 851; 953; 971; 997.
 - (3) 1009 ; 1517 ; 1729 ; 4576 ; 2501 ; 4717 ; 3389.
- 4. Determine which of the following numbers are divisible by 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 respectively :--(1) 165; 216; 324; 425; 639; 936; 868; 512; 795.

- (2) 3164; 4228; 11172; 2859; 11599; 14916; 53729.
- (3) 1235; 6467; 38187; 123456; 777777; 601830.
- (4) 2709344; 50707338; 6913580247; 726441196.
 - 5. How many prime numbers are there between ?-
- (1) 16 and 96. (4) 330 and 350.
- (2) 53 and 100.
- (5) 556 and 600.
- (3) 140 and 230.
 (6) 700 and 1008.
- 6. By what numbers may 179, 313 and 799 be divided that the remainders may be 3, 5 and 7 respectively?

GREATEST COMMON MEASURE.

205. A common measure or common factor of two or nore numbers is any number, which will divide each of them without leaving a remainder.

Thus, each of the numbers 2, 3 and 6 is a common measure or common factor of 18 and 30, for each of the numbers 2, 3 and 6 divides 18 and 30 exactly.

206. The greatest number that divides each of two or more numbers exactly is called their Greatest Common Measure (G. C. M.) or Highest Common Factor (H. C. F.)

Thus, 6 is the Greatest Common Measure of 18 and 30, for it is the greatest number capable of dividing each of them exactly.

207. If one number measure each of two others, it will measure their sum and difference; also, any multiples of each, their sums and differences.

Thus, 4 is a common measure of 20 and 12; and their sum= $20+12=52=4\times8$; their difference= $20-12=8=4\times2$; a multiple of $20=20\times5=100=4\times25$; of $12=12\times7=84=4\times21$;

also, $100+48=148=4\times37$; $100-48=52=4\times13$; each of which evidently comprises the number 4 as a measure or factor; and similarly of more numbers.

Examples LII.

10 1 for tradition the many of

	Find, by ins	pection, the G. C.	м. от:	
1.	4 and 6.	2. 6 and 9.	3. 8 and 12.	4. 9 and 24.
5.	20, 32.	6. 48, 27.	7. 42, 28.	8. 48, 54.
9.	91, 84.	10. 30, 45.	11. 45, 57.	12. 42, 56.
13.	21, 23, 35,	14. 30, 25, 45.	15. 32, 40, 48.	16. 30, 35, 40.

208. The 6. C. M. of two or more numbers may often be found by resolving each number into its prime factors and then taking the product of all the prime factors common to them.

Ex. Find the G. C. M. of 63 and 168.

 $63=7\times9=7\times3\times3$; $168=7\times24=7\times3\times8=7\times3\times2\times2\times2$. Therefore the factors common to 63 and 168 are 7 and 3; hence the G. C. M.= $7\times3=21$. Ans.

309. In finding the G. C. M. of two or more numbers, it is sufficient to find the prime factors of one of the numbers, and then find by trial which of these factors divide each of the remaining numbers exactly; the product of all these common factors is the required G. C. M.

Ex. Find the G. C. M. of 192, 744 and 1044.

The prime factors of 492 are 2, 2, 3 and 41; of these factors 2, 2 and 3 divide 744 and 1044 exactly, but 41 does not divide them.

Hence, the required G. C. M. is 2 x 2 x 3 or 12. Ans.

Evannles LIII

		_	 	
min a	L		 	 -c.

	Find, by method of	factors, the G. C. M. of :	
1.	45 and 72.	2. 64 and 96.	3. 48 and 72.
4.	56 and 140.	5. 81 and 171.	6. 74 and 259.
7.	205 and 287.	8. 325 and 425.	9. 230 and 414.
10.	490 and 546.	11. 308 and 506.	12. 247 and 323.
13.	1216 and 424.	14. 620 and 2108.	15. 45, 72 and 81.
16.	162, 729 and 4374.	17. 1326, 3	094 and 4420.
18.	372, 994 and 3132.	19. 504, 52	92 and 3040.

20. 102, 612, 476, 816 and 428.

210. When numbers can easily be resolved into their prime factors we have shown in Art. 208, that their G. C. M. is formed by the product of the least powers of those factors which are common to all the given numbers, but when the numbers are large and their prime factors cannot be readily determined, we use a different method.

211. To find the G. C. M. of two numbers, whose prime factors cannot be readily ascertained, we use the following Rule.

RULE. Divide the greater of the numbers by the less, then the first divisor by the remainder, then the second divisor by the second remainder, and repeat this operation till there is no remainder; the last divisor will be the G. C. M. required.

936 324)936(2 648 288)324(1 288 The third divisor is 936 and the third remainder 324; and so on.

36)288(8 The final divisor is 36. 288 , the required G. C. M. is 36.

212. To find the G. C. M. of three or more numbers.

RULE. Find the G. C. M. of the first two numbers; then the G. C. M. of this G. C. M. and the third number; then the G. C. M. of this last G. C. M. and the fourth number; and continue this process to the last number; the last G. C. M. is the required G. C. M. of the given numbers.

Ex. Find the G. C. M. of 741, 1131, 1183 and 1989.

28.	6186, 10310, 15465.	29.	12018, 20030, 30045.
30.	1617, 2871, 4213.	31.	13338, 14136, 15903.
32.	16442, 24663, 41105.	33.	2697, 3441, 1271.
34.	204, 1190, 1445, 2006.	35.	12558, 20769, 47403, 12581.
0.0	0	917	****** ****** 48026

36. 5040, 23940, 28350, 31773. 37. 38. 70813288, 852706430 and 686138242.

39. 1070784, 1180608, 1455168 and 1530376.

40. 22680, 49140, 154980, 429660 and 925932.

213. Numbers which have no common measure greater than unity, are said to be prime to each other.

Thus, 15 and 29 are prime to each other.

Ex. Are 1726 and 1623 prime to each other.

:. 1726 and 1623 are prime to each other.

214. Every common measure of two numbers is a measure of their G. C. M.

Thus, 2 and 3 being common measures of 18 and 30, is a measure of 6, the G. C. M. of 18 and 30.

215. The numbers of which the G. C. M. is required must refer to the same unit, and the G. C. M. refers to that unit.

Thus, the G. C. M. of Rs.429 and Rs.715 is Rs.143; the G. C. M. of 224 feet and 336 feet is 112 feet.

Examples LV.

- 1. Are the following numbers prime to each other :-
- (1) 5789 and 7337. (2) 3375 and 5836. (3) 49561 and 97073.
- (4) 58573 and 84329. (5) 9367 and 14501. (6) 19001 and 46253. (7) 2698705 and 54987262. (8) 18432, 21052 and 42805.

2. Find the G. C. M. of :--

(1) 8029 and 23791. (2) 441441 and 844272. (3) 181896 and 147576. (5) 218707, 526769 and 695822. (4) 39835 and 162424.

Examples worked out-

Ex. 1. Find the greatest number that will divide 2293, 4245 and 5348 leaving the remainders 18, 20 and 23 respectively.

2293-18=2275; 4245-20=4225; 5348-23=5325.

The read, no. is the G. C. M. of 2275, 4225 and 5325=25. Ans.

Ex. 2. Two bills, one amounting to Rs.78. 12a. and the other to Rs.120 are to be paid in coins of one kind; what is the largest coin that can be used?

Rs.78. 12a. = 1260a.; Rs.420 = 6720a.

... the largest coin required is the G. C. M. of 1260a, and 6720a. = 420a. = Rs. 26. 4a. Ans.

Ex. 2. The sum of two numbers is 1144, and their G. C. M. is 143; how many pairs of such numbers can be formed? Form them. 1144+143=8.

Now 8=1+7=2+6=3+5=4+4, and no more.

Of these parts the only pairs of numbers that are prime to each other are 1, 7 and 3, 5. Hence only two pairs of numbers can be formed.

Thus, the first pair = 1 × 143 and 7 × 143, or 143 and 1001; Ans. and the 2nd pair = 3 × 143 and 5 × 143, or 429 and 715.

As regards the other pairs that can be formed, 143 will be a common measure, but not the G. C. M.

Ex. 4. The product of two numbers is 3240, and their G. C. M. is 18; how many pairs of such numbers can be formed? Form them.

3240+182=10: and 10=1 x 10 or 2 x 5.

Hence only two pairs of numbers can be formed.

Thus, the 1st pair=18×1 and 18×10, or 18 and 180; Ans. and the 2nd pair=18×2 and 18× 5 or 36 and 90.

Ex. 5. What number is that which, when divided by 6, the quotient again by 6, and that quotient again by 6, will give the G. C. M. of 35 and 135?

The G. C. M. of 35 and 135 is 5.

Now the question is, what number is that which, when divided by 6, the quotient again by 6, and that quotient again: by 6, will give 5?

Since, 6, 6 and 6 are the three divisors and 5 the last quotient, ... the first dividend or the required number is 5 x (6 x 6 x 6)

Examples LVI.

1. What is the greatest sum of money contained exactly in Rs.34, 7a, 6p, and Rs.70. 12a. 6p.?

2. Find the greatest number that will divide 35 and 61, leaving

remainders 3 and 5 respectively.

 What number is that which, when divided by 12, the quotient again by 12, and that quotient again by 12, will give the G. C. M. of 148 and 772?

4. Find the greatest weight in grains, that will measure both pounds Avoir, and pounds Troy.

5. The sum of two numbers is 928, and their 6. C. M. is 58; form as many pairs of numbers as convenient.

6. What is the greatest unit of time with which 15 hrs. 12 min. and 1 day 3 hrs. 33 min. can be both represented by integers?

and 1 day 3 hrs. 33 min. can be both represented by integers?

7. Find the greatest number that will divide 1624, 2878 and 1220 leaving 7 as remainder after each division.

8. The product of two numbers is 5700, and their G. C. M. is 5

find as many pairs of numbers as convenient.

9. In working out a question in the G. C. M. of two numbers,
I found the different remainders were 2388, 180, 48, 36 and 12, and

the first two quotients 1 and 9; find the numbers, and the last three quotients.

10. In solving a question in the O.C. M. of two numbers, the

quotients are 5, 1, 18, 1, 3, 1 and 2. The last divisor is 15. Find the numbers.

11. The sum of two numbers is 1394, and their 6. C. M. is 34;

how many pairs of numbers can be formed?

12. The product of two numbers is 4608, and their G. C. M. is

how many pairs of numbers can be formed?
 What highest number will divide 287, 480 and 599 leaving

the remainders 2, 5 and 10 respectively?

14. What is the greatest number by which, when 399, 695, 548,

1003 are divided, the respective remainders are 3, 2, 8 and 4?

15. Two bills, one of £4. 131. 8d. and the other of £6. 91. 4d. are to be paid in the same coin. Find the largest coin that can be used.

16. A has Rs.679, B Rs.5901 and C Rs.6734; they agree to lay it out for sheep, at the highest price per head that will allow each exactly to invest his money; how much can they pay a head and how many can each purchase?

17. Find the two numbers nearest to 10000 that have 169 for their G. C. M.

18. A national school-master divided his scholars, consisting of 221 boys and 143 girls, into the largest possible equal classes so

that each class of boys should contain the same number as each class of girls. Find the number of classes.

19. A person wishes to distribute 805 mangoes, 1311 guavas, and 1978 plantains, equally among a number of beggars. Find the greatest number receiving the charity in this way.

20. A labourer was engaged for a certain number of days for Rs.10. 15a. 8b., but being absent on some of these days he was paid only Rs.2. 2. 8b., but being absent on some of these days he was paid only Rs.2. 2. 8b., shew that his daily wases cannot exceed 10a. 4b.

only Rs. 3. 3. 8p; shew that his daily wages cannot exceed 10a. 4p.

21. Find the greatest number of 4 digits and the least number

of 5 digits that have 124 for their G. C. M.

22. Find the greatest and the least number of 6 digits that have 251 for their common measure. What is their G. C. M.?

III LEAST COMMON MULTIPLE.

216. A common multiple of two or more numbers is any number which is divisible by each of them separately.

Thus, 96 is a common multiple of 2, 3, 4, 6, 8 and 12, because it is divisible by each of them.

217. The Least or Lowest Common Multiple (i. c. M.) of two or more numbers is the *least* number that can be divided by

each of them without a remainder.

Thus, 24 is the Least Common Multiple of 2, 3, 4, 6, 8 and 12, for it is the Least number that the above numbers can divide without leaving a remainder.

218. The L. C. M. of two or more numbers may be obtained by resolving them into their prime factors, and taking the product of the highest powers of all the factors that are found in the given numbers.

Ex. Find the L. C. M. of 8, 12, 16, 20, 25 and 30.

 $8=2\times2\times2$ = 2^3 ; $12=2\times2\times3=2^2\times3$; $16=2\times2\times2\times2=2^4$; $20=2\times2\times5=2^2\times5$;

 $25 \approx 5 \times 5$ $= 5^2$; $30 = 2 \times 3 \times 5 = 2 \times 3 \times 5$.

Here the factors that occur in the given numbers are 2, 3 and 5, of which the highest power of 2 is 2^4 , and that of 5 is 5^2 ; therefore the L. C. M. is $2^4 \times 3 \times 5^2 = 16 \times 3 \times 25 = 1200$. Ans.

Examples LVII.

1. Find mentally the L. C. M. of :—
(1) 6, 8. (2) 8, 16. (3) 10, 15. (4) 18, 30. (5) 12, 27. (6) 10, 18. (7) 16, 24. (8) 12, 15. (9) 3, 4, 5. (10) 2, 5, 7. (11) 3, 4, 16. (12) 5, 8, 20. (13) 16, 12, 24. (14) 7, 10, 24. (15) 5, 12, 15.

2.	Find, by	resolving into factors, the L. C	. M. of :-	
(I) 12,	16, 18.	(2) 16, 24, 30.	(3) 24, 56, 84.	
4) 15,	35, 16, 56	. (5) 25, 60, 84, 15. (8) 729, 1681.	(6) 81, 27, 45, 18.	
7) 756	, 6435.	(8) 729, 1681.	(9) 1008, 2064.	
0) 756	, 350, 907	5. (11) 735, 1575, 2205.	(12) 225, 336, 360.	

(14) 11573, 19397, 28036. (13) 196, 350, 728, 924.

(15) 72, 96, 144, 180, 450, 540. (16) 44, 126, 280, 198, 330.

219. To find the L. C. M. of two large numbers which cannot easily be resolved into prime factors, we use the following Rule,

RULE. Find the G. C. M. of the two numbers, and then multiply either of the numbers by the quotient arising from dividing the other by the G. C. M. The product will be the L. C. M. of the numbers.

Ex. Find the L. C. M. of 200 and 304.

Here, the G. C. M. is 19. Also 209+19=11.

., the L. C. M. = 11 x 304 = 3344. Ans.

220. To find the L. C. M. of three or more numbers which cannot be readily resolved into factors, use the following Rule,

RULE. First find the L. C. M. of two of the numbers as in Art. 219; then the L. C. M. of this and another and so on, until all are taken. The last L. C. M. is the L. C. M. required.

Ex. Find the L. C. M. of 64, 250 and 432.

The G. C. M. of 64 and 250 is 2, and their L. C. M. is 8000.

The G. C. M. of 8000 and 432 is 16, and the L. C. M. is 216000. Hence, the L. C. M. required = 216000. Ans.

Examples LVIII.

Find	42	~	 - C .

15. 2523, 5887, 203, 8631.

10. 13.

Find the L. C. M. c	4:		
289, 323.	2.	849, 1132.	3. 508, 889.
420, 798.	5.	1287, 6281.	6. 7247, 9365.

16. 1175, 4747, 5875, 9447.

221. When the L. C. M. of several small numbers is required, the easiest method is that given by the following Rule.

RULE. Arrange the given numbers in a horizontal line from left to right, with a comma placed between every two. Divide by any one of the prime numbers 2, 3, 5, 7, 11 ... which will divide any two at least of the given numbers exactly; set down the quotient so obtained and the undivided numbers in a line below, separatred as before. Proceed in the same way with the numbers in the second, and each succeeding line, till we come to a line where no two numbers have a common divisor. The product of the numbers in the last line and of the several divisors is the L. C. M. of the given numbers

Note. The work may often be shortened by striking out in the same line every number which exactly measures any other number in that line.

Ex. Find the L. C. M. of 2, 3, 8, 9, 15, 21 and 35. 2)2, 3, 8, 9, 15, 21, 35 3)4, 8, 8 9 31, 3, 4, 9, 15, 21, 35 31, 3, 4, 9, 15, 21, 35 35 the L. C. M. = 5)1, 1, 4, 3, 5, 7, 35 37)1, 1, 4, 3, 1, 7, 7

3)4, 4, 8, 9, 15, 21, 35 8, 3, 5, 7, 35 the L. C. $M = 3 \times 8 \times 3 \times 3$ In the first line 2 is contained in

1, 1, 4, 3, 1, 1, 1

∴ the L. c. M.=2×3×5×7×4×3

=2520 Ans.

-2520 Ans.

In the first line 2 is contained in 1, and ∴ struck off.

In the second line 5 and 7 are both contained in 35, and ∴ struck off.

Examples LIX.

Find the L. C. M. of :--

 1.
 12, 15, 16.
 2, 8, 16, 20.

21. 35, 52, 63, 77, 132, 117, 143. 22. 27, 91, 42, 39, 63, 156, 234.

23. 27, 36, 54, 72, 84, 96, 215, 248, 324. 24. 18, 24, 35, 48, 56, 60, 72, 90; 120.

25. 7, 11, 21, 63, 91, 99, 117, 143. 26. 24, 35, 52, 60, 91, 108, 126, 156.

26. 24, 35, 52, 60, 91, 108, 126, 156, 315. 27. 26, 30, 34, 39, 51, 65, 78, 85, 102, 195, 255.

28. 27, 87, 189, 126, 145, 210, 203, 261, 385.

29. 8, 9, 10, 11, 12, 14, 15, 18, 21, 24, 28, 35, 36, 49, 42, 44, 45, 50.
30. The first 12 numbers; the even numbers from 10 to 28 inclusive

^{222.} Every common multiple of two numbers is a multiple of their L. C. M.

Thus, 48 a common multiple of 8 and 12 is a multiple of 24, the

\$23. If two numbers are prime to each other, their L. C. M. is their product.

Thus, the L. C. M. of 13 and 15 is 13×15=105.

324. Since the L. C. M. of two numbers is their product divided by their G. C. M. (Art. 219), therefore the L. C. M. X the G. C. M. of two numbers is equal to their product. Hence, if the G. C. M., the L. C. M., and one of the two numbers be given, we can find the other number by multiplying the G. C. M. and the L. C. M. and dividing the product by the given number.

Ex. The G. C. M. and the L. C. M. of two numbers are II and

IISO3 respectively, and one of them is 319; what is the other? Here, the G. C. M. x the L. C. M.=11 x 11803=129833.

the required number = 120833 + 310 = 407. Ans.

225. (1) To find the *least* number that will contain each of two or more given numbers exactly.

RULE. The required *least* number is the L. C. M. of the given numbers.

Ex. 1. Find the least number that is divisible by 40, 63, 112. The required number = the L. C. M. of 40, 63, 112=5040. Ans.

E.v. 2. Five bells toll at intervals of 5, 8, 9, 10 and 12 seconds respectively; what interval will elapse between two of their successive tollings together?

The L. C. M. of 5, 8. 9, 10, 12 is 360,

.. the required time = 360 sec. or 6 min. Ans.

(2) To find the least number which, when divided by each of several given numbers, leaves the same remainder.

RULE. Find the L.C. M. of the several given numbers and to it add the given remainder. The sum is the required *least* number.

Ex. Find the least number which, when divided by A. 18, 21

and 20, leaves in each case a remainder 3.

The L. C. M. of 4, 18, 21 and 20 is 1260.

... the required number = 1260+3=1263. Ans.

Examples LX.

1. Find the least number which, when divided by 6, 8 and 9, gives in every case the remainder 5.

2. What is the smallest sum that can be paid either in guineas, or in half-crowns, or in florins or in half-sovereigns?

3. Five bells begin to toll simultaneously and they toll at intervals of 4, 6, 8, 9 and 10 seconds. After what time will they again toll simultaneously?

4. Find the least number which, when divided by 675, 1050 and 1368, will leave the same remainder 32.

5. Find the least weight that can be weighed by either pounds

Avoir, or pounds Troy.

6. Six men fire at a target at intervals of 2, 5, 7, 10, 12 and 14 minutes respectively. After what time will they all first fire simultaneously, and how many times will each man have fired?

7. Seven bells are tolling, and they toll at intervals of 3, 5, 7, 8, 9, 10 and 12 seconds respectively. What interval will elapse between their once tolling together and tolling together again?

8. A can go round a circular course in 6 minutes, B in 8. C in 12, D in 15, and E in 18; if they all start together from the same place at the same time $(7h, 13m, \lambda, M)$, when will they be together again?

 Find the least sum of money that can be paid in pence, shillings, florins, half-crowns, crowns, sovereigns or half-sovereigns.

 The G. C. M. and the L. C. M. of two numbers are 124 and 10540 respectively, and one of the numbers is 620; find the other.

 A heap of pebbles can be made up exactly into groups of 25; but when made up into groups of 18, 27 and 32, there is always a remainder of 11; find the least number of pebbles such a heap can contain.

12. A basket contains a number of oranges ascertained to be between 500 and 500. It 2 fruits are taken away, the remainder may be distributed equally among 3, 4, 5, 6 or 7 boys. Find the number of oranges in the basket.

13. A book is divided into four parts, each part being divided into chapters. The number of pages in each part is the same. Each chapter in the first part contains 20 pages, each chapter in the second, each chapter in the time of the outh 80 Find the number of pages and chapters in the book, the number o pages in the book, the number o pages in the book is known to be between coo and 1600.

14. Three horses are running round a race course of 528c yards; the first horse runs 440 yards a minute, the second 352 yards and the third 261 yards: find the time between their once comin.

and the tintal 2014 yards; find the time between their once coming all together again.

15. What is the least number which, when increased by 17. it

divisible by 22, 25, 33, 44 and 45 separately?

16. The G.C. M. and the L. C. M. of two numbers are 19 and 49077 respectively, and one of them is 779; find the other.

17. What is the least number which, when diminished by 145 is exactly divisible by 24, 27, 28, 32, 36 and 56?

18. What is the least number which, when divided by all the

digits except the first, leaves the remainder 1?

19. The G. C. M. of two numbers of 4 digits is 221, and their

L. C. M. is 46189; determine the numbers.

20. Find all the numbers between 250 and 600 that have 172

for their L. C. M.

21. Find the least sum of money that can be paid in coins worth either 8 pies, half-rupees, rupees, 5 sikis, 10 sikis, 14 sikis,

Rs.5. 4a., Rs.10. 8a.

22. There is an island 48 miles in circumference. Four persons A, B, C and D begin to walk continually round it starting from the same place at the same time. They walk 3, 4, 6 and 8 miles per hour respectively. How soon will they all be again together at the starting point?

23. Five men run round a circular park in 4, 5, 6, 7 and 8 hours respectively. If they all start at the same time from the same point, find the least number of hours in which they will avain be at that

point together.

24. Three round pillars are to ft. 5 in., 14 ft. 7 in and 6 yds. 9 in. respectively in circumference; find the length of the shortest rope

that can be wrapped round each an exact number of times.

25. The circumferences of the wheels of a carriage are 7 ft. 4 in. and 11 ft.; what is the least distance in which both the wheels will make an exact number of revolutions?

26 A cask is required to be exactly filled by any one of the following measures; 1 seer, 2 seers, 3 seers, 6 seers or 9 seers;

find the smallest cask for this purpose.

7. I have travelled between 700 and 760 miles; had I travelled 20 miles less, I could have completed my journey in a train which goes at the rate of 40 miles an hour, or in a carriage which goes at the rate of 16 miles an hour or not at the rate of 6 miles an hour in an exact number of hours. Find the distance I have travelled.

28. Find the least number of 8 digits that is divisible by 15, 18, 25, 35, 40 and 55. Also the greatest number of 5 digits that is divisible by 14, 20, 35, 45 and 75.

CHAPTER V.

The Doctrine of Fractions.

(USUALLY TERMED VULGAR FRACTIONS).

220. When a magnitude contains its unit a number of times exactly, the resulting number is called an integer or whole number (Art. ?). Hence all vulote numbers, or integers, being supposed to be formed by the repetition of the unit, may therefore be regarded as the result of the multiplication of that element; but if the unit be considered capable of division into any number of the unit be considered capable of division into any number of hight of droders magnitudes; and these are therefore termed Fractions or more generally. Vulgar Fractions, in order to distinguish them from fractions of a different form, whose nature will be discussed in the next chapter.

I. NOTATION AND NUMERATION OF FRACTIONS.

227. A Fraction denotes a part or parts of a unit; it is expressed in figures by two numbers placed one above the other with a bar or line between them.

228. If we suppose the unit to be divided into 2, 3, 4, 5, &c., equal portions, one of the portions in each case is represented by \$\frac{1}{2}, \frac{1}{2}, \fr

229. If two or more of these equal portions be taken together, the aggregates thence arising are expressed by repeating the unit as often as such portions are repeated, in the form of their sum, the

number below the line remaining the same.

Thus, if the primitive fraction \(\frac{1}{2}\) be taken twice, there will arise a new fraction expressed by \(\frac{1}{2}\); and \(\frac{1}{2}\) be trepeated their, there results a new fraction will be \(\frac{1}{2}\); and similarly of all the other primitive fractions: \(\frac{1}{2}\); and similarly of all the other primitive fractions: \(\frac{1}{2}\); and fractions \(\frac{1}{2}\); \(\frac{1}\); \(\frac{1}{2}\); \(\frac{1}{2}\); \(\frac{1}{

230. Hence, the number below the line denotes the number of equal portions into which the unit is supposed to be divided, and is therefore Called the denominator; and the number above the line expressing the number of such equal portions intended to be taken, is therefore termed the numerator. The numerator and denominator are called the terms of a fraction.

Thus, of the fraction \(\frac{1}{2}\), whose terms are 5 and 7, the denominator 7 implies that the unit is supposed to be divided into seven equal portions; and the numerator 5 shews that five of such equal portions are here the object of our consideration.

231. The sum of a whole number and a fraction is called a Mixed number; as, 4+\(\frac{\pi}{\pi}\) or rather 4\(\frac{\pi}{\pi}\); for the addition sign is almost always omitted.

232. From what has been said above, it appears, that a fraction expressed in figures is reading the unmerator and then the denominator with the termination "the"; thus § is read five-sevenths. The exceptions are tent fractions with denominator or are read as so many hatters or thirth, and with denominator 4 as 50 are read as so many hatters as well as fourthet. A mixed number is read by connecting the integer and the fraction by "and"; thus, 4½ is read four and live-seventhet.

233. From Art 230, it follows, that if the numerator be less than the denominator, the value of the fraction is less than the unit; if the numerator be equal to the denominator, the value of the fraction.

tion is the unit; and if the numerator be greater than the denominator, the value of the fraction is greater than the unit.

234. Every whole number or integer may be expressed as a fraction whose denominator is I.

Thus, $7 = \frac{1}{1}$, for the unit is divided into 1 part, comprising the whole unit, and 7 of such parts, that is 7 units, are taken.

235. A fraction also expresses the quotient of the numerator

by the denominator.

Thus, \$=5+7; since 1 unit is 7-sevenths, therefore 5 units is

35-sevenths, and therefore 5 divided by 7 is 35-sevenths divided by 7, and is therefore 5-sevenths; that us, 5+7=4. Hence 4 is not only read 5 sevenths but also 5 by 7.

Similarly, $\frac{\pi}{4} = 8 \div 4 = 2$; $\frac{\pi}{4} = 7 \div 7 = 1$; and so on.

236. From the last Art. it follows, that if we multiply a fraction by its denominator we get its numerator.

Thus, since ϕ is the seventh part of 5. ϕ repeated 7 times gives 5. or $\phi \times 7 = 5$; and 5 may therefore be expressed in a *Fractional Form* by ϕ .

237. If we take a fractional magnitude, and considering it as a new unit, divide it into any number of equal parts and take one or more of these parts, we shall obtain a fraction of a fraction; as \$ of \$.

238. When fractions are represented in the manner above explained, they are called Vulgar Fractions, (i.e.) common or ordinary fractions.

239. We make the following distinctions in fractions :-

(t) A proper fraction is one in which the numerator is less than the denominator; thus $\frac{\pi}{4}$, $\frac{\pi}{4}$, $\frac{\pi}{4}$ are proper fractions.

(2) An improper fraction is one in which the numerator is either equal to or greater than the denominator; thus \(\frac{3}{2}, \frac{6}{3}, \frac{1}{4}^6\) are improper fractions.

(3) A simple fraction is one in which numerator and denominator are both whole numbers. thus ²/₃, ²/₃ are simple fractions.

(4) A compound fraction is a fraction of a fraction; thus ³/₄ of ³/₇, of ⁵/₄ of ⁵/₄ are compound fractions.

(5) A complex fraction is one in which numerator or denominator or both are not whole numbers; thus ²/₃, ²/₃, ²/₃; ³/₄;

 $\frac{2\frac{1}{7}}{\cdot}$, $\frac{2\frac{1}{3}+1\frac{4}{5}}{\cdot}$ are complex fractions.

240. The reciprocal of a fraction is the fraction formed by interchanging its terms; thus the reciprocal of \$\frac{1}{2}\$ is \$\frac{1}{2}\$; of 5 or \$\frac{1}{2}\$ is \$\frac{1}{2}\$.

241. We are hence enabled to find the results of the multiplication and division of a fraction by an integer, and these may be integers or fractions.

(i) To multiply a fraction by a whole number, only multiply the numerator by it.

Thus,
$$\frac{4}{13} \times 3 = \frac{4 \times 3}{13} = \frac{12}{13}$$
; because in $\frac{12}{13}$, three times as many parts of the unit are implied, as there are in $\frac{4}{13}$.

(2) To divide a fraction by a whole number, only multiply the denominator by it.

Thus, $\frac{2}{7} + 5 = \frac{2}{75} = \frac{2}{35}$; because the same number of parts are indicated in $\frac{2}{3}$ and $\frac{2}{3}$ and each part in the former is *five times* as great as each part in the latter, by Art. 230.

Examples LX7.

1. What fraction do we form in dividing a unit into 13 equal parts, and taking 11 of them; into 1000 equal parts, and taking 101?

Express in figures :—

One seventh; one quarter; seven halves; thirty-four thirds; forty-five seventy-ninths; seven-eighths; seven, and a half; nine, and seven-ninths; sixteen, and four twenty-oneths; two hundred, and three-elevenths: ninety-four, and five-seventeenths.

- 3. Express in words :-
 - 3, 4, 5, 14, 15, 37, 811, 2411 and 1257880.
- 4. Multiply :-
- 5. Divide :-
- (1) \$\frac{4}{2}\$ each separately by 2, 3, 5, 7, 9, 11, 12, 13 and 18.
- (1) + and + each separately by 2, 3, 5, 7, 9, 11, 12, 13 and 13 (2) 12 and 12 36, 68, 80, 95, 112 and 157.

II. TRANSFORMATION OF FRACTIONS.

242. If the numerator and denominator of a fraction be both multiplied or both divided by the same number, the value of the fraction will not be altered.

For, if the fraction $\frac{\pi}{2}$ be multiplied by 5, the product is $\frac{1}{2}\frac{\pi}{2}$; and again if this be divided by 5, the quotient is $\frac{\pi}{2}\frac{\pi}{2}$, by Art 241; but since these two operations are the reverse of and therefore neutralize each other, it follows that—

$$\frac{3}{7} = \frac{15}{35} = \frac{3 \times 5}{7 \times 5}$$
; and also, that $\frac{15}{35} = \frac{3}{7} = \frac{15 + 5}{35 + 5}$.

243. It is clear from the above, that a whole number may be expressed in the form of a fraction with any denominator we please.

Thus,
$$5 = \frac{5}{1} = \frac{5 \times 2}{1 \times 2} = \frac{10}{2} = \frac{20}{4} = \frac{35}{2} = &c.$$

Also, a fraction may be transformed into another with a given denominator or numerator, provided it be a multiple or sub-multiple of the denominator or numerator of the proposed fraction.

Ex. 2. Convert & into a fraction with 96 for its denominator, and reduce 24 to a fraction with denominator 5.

(1)
$$\frac{7}{8} = \frac{7 \times 12}{8 \times 12} = \frac{84}{96}$$
; (2) $\frac{24}{40} = \frac{24 + 8}{40 + 8} = \frac{3}{5}$.

Ex. 2. Convert $\frac{a}{2}$ into a fraction with numerator 55, and $\frac{a}{2}$ into a fraction with numerator 7.

(1)
$$\frac{5}{6} = \frac{5 \times 11}{6 \times 11} = \frac{55}{66}$$
 (2) $\frac{56}{64} = \frac{56 + 8}{64 + 8} = \frac{7}{8}$.

244. Since
$$\frac{5}{8} \times 4 = \frac{20}{8} = \frac{5 \times 4}{2 \times 4} = \frac{5}{3}$$
;

therefore, to multiply a fraction by an integer, it appears to be immaterial whether the numerator be multiplied, or the denominator be divided, by it; and since

$$\frac{8}{9} + 4 = \frac{8}{36} = \frac{2 \times 4}{9 \times 4} = \frac{2}{9}$$
:

therefore, to divide a fraction by a whole number, it amounts to the same thing whether we multiply the denominator, or divide the numerator by it.

245. Now, referring to Art. 241, we see that we have a choice of two methods both in the multiplication and division of a fraction by an integer, and we prefer the latter in accordance with the direction: "Divide when you can, multiply when you are obliged."

Examples LXII.

- 1. Reduce each of the whole numbers 3, 5, 7, 8, 15, 18, 20, 25 to fraction with the denominator 13.
- 2. Convert 26, 117 and 125 into fractions with denominators 13, 25 and 35 respectively.
- 3. Convert \(\frac{1}{2}\), \(\frac{3}{2}\), \(\frac{3}{2}\), \(\frac{3}{2}\), \(\frac{3}{2}\), \(\frac{3}{2}\) and \(\frac{7}{15}\) into fractions having 120 for their denominator.
- Express 14, ½5, ½5 and ½5 as fractions having 756 for their common numerator.
- 5. Express \$\frac{2}{2}, \frac{2}{2}, \frac{

246. To express a mixed number as an improper fraction.

Multiply the integer by the denominator of the fraction : to the product add the numerator and the result will be the new numerator, which placed over the given denominator will form the improper fraction required.

Ex. Represent 34 as an improper fraction.

$$3\frac{4}{5} = \frac{3 \times 5 + 4}{5} = \frac{15 + 4}{5}$$
 For $3\frac{4}{5} = \frac{3}{1} + \frac{4}{5} = \frac{3 \times 5}{1 \times 5} + \frac{4}{5}$ (Art. 2.42.)
= $\frac{1}{2} \cdot \frac{4}{5} = \frac{1}{5} \cdot \frac{4}{5}$ (Art. 2.29.)

247. To represent an improper fraction as a whole or mixed number

RULE. Divide the numerator by the denominator, and the quotient will be the integral part; and the fractional part will be formed by placing the remainder over the given denominator. If there be no remainder, the fraction is equivalent to the integer thus found. Ex. Reduce % and 327 to whole or mixed numbers.

(1)
$$\frac{8)32}{4}$$
 For $\frac{32}{8} = \frac{8 \times 4}{8 \times 1} = \frac{4}{1}$ (Art. 242)=4. (Art. 234.)

248. The complete quotient of one number divided by another is the mixed number obtained by the above Rule,

Thus, the complete quotient of 79 divided by 15 is the mixed number 513, for 79+15=12=5.4x.

Examples LXIII.

- Express orally the following as improper fractions:
- (1) 14; 23; 33; 88; 94; 64; 58; 75; 44; 94;
- (2) 1312; 1544; 1612; 1946; 1412; 2014; 1744.
- 2. Convert into improper fractions :-
- (1) 121 4: 54 4: 41 7 : 123 4: 156 4: 95 8: 22 4:
- (2) 27514; 37444; 34484; 10118; 4054; 1918; 444.
- (3) 704 12; 5x2x; 14822; 25222; 685218; 98791425.
- 3. Express orally as mixed or whole numbers :-
- (2) 149 : 149 : 24 : 257 : 152 : 145 : 147 : 117 : 81.
 - 4. Represent the following as mixed or whole numbers :-

(1)
$$\frac{440}{13}$$
; $\frac{2417}{19}$; $\frac{3797}{20}$; $\frac{9999}{31}$; $\frac{30471}{37}$; $\frac{523}{23}$; $\frac{747}{45}$; $\frac{775}{31}$.

$$(2) \ \frac{3003}{217}; \frac{4521}{171}; \frac{6984}{481}; \frac{52504}{572}; \frac{51637}{152}; \frac{9999}{347}; \frac{19585}{144}.$$

 $\begin{array}{c} 3 \\ 3 \\ \hline \\ 900 \\ \end{array} \begin{array}{c} 3 \\ \hline \\ 900 \\ \end{array} \begin{array}{c} 3 \\ \hline \\ 9891 \\ \end{array} \begin{array}{c} 3 \\ \hline \\ 7816 \\ \end{array} \begin{array}{c} 3 \\ \hline \\ 90999 \\ \end{array} \begin{array}{c} 3 \\ \hline \\ 30125 \\ \end{array} \begin{array}{c} 1516461 \\ \hline \\ 100001 \\ \end{array} \begin{array}{c} 10000111 \\ \hline \\ 100001 \\ \end{array}$

5. Express the reciprocals of the following fractions as mixed

$$\frac{7}{15}$$
; $\frac{15}{40}$; $\frac{17}{65}$; $\frac{100}{6874}$; $\frac{87}{2115}$; $\frac{99}{4567}$; $\frac{152}{51847}$; $\frac{1251}{50056}$;

6 Express $41\frac{\pi}{8}$, $25\frac{11}{2}$, $9\frac{1}{2}$, and $10\frac{\pi}{80}$ as fractions, with denominators 240 and 720.

7. Find the respective values of :-

249. To express a compound fraction as a simple one.

A Compound Fraction is made up of two or more simple fractions connected by the word of a state of 3%.

RULE. Multiply all the numerators together for the numerator of the simple fraction, and all the denominators together for its denominator.

E.r. 1. Convert & of \$ of \$ into a simple fraction.

$$\begin{cases} 1 \text{ of } 4 \text{ of } \frac{1}{3} = \frac{1 \times 4 \times 6}{3 \times 5 \times 7} & \text{For } \frac{3}{2} \text{ of } \frac{3}{3} = \frac{3}{15} \times 4 = \frac{3}{2} \\ -\frac{13}{15} \cdot 4n\pi, & \text{whence, } \frac{3}{2} \text{ of } \frac{3}{2} = \frac{3}{2} \frac{3}{2} + \frac{3}{2} = \frac{3}{16} \frac{3}{15}. \end{cases}$$

$$(Art. 241.)$$

$$\therefore \frac{1}{3} \text{ of } \frac{4}{5} \text{ of } \frac{4}{5} = \frac{1 \times 4 \times 6}{3 \times 5 \times 7} = \frac{34}{105}.$$

Note: Before applying the above Rule mixed numbers must be expressed as improper fractions.

Note 2 If there are factors common to both numerator and denominator, they may be consciled or struck out, before obtaining the final result: for this is in fact simply dividing the numerator and denominator of a fraction by the same number. (Art. 242.)

Ex. 2. Reduce \$ of 2 1/2 of 5 1/2 to a simple fraction.

$$\begin{array}{l} \frac{2}{5} \text{ of } 2\frac{1}{12} \text{ of } 5\frac{1}{25} = \frac{6}{5} \text{ of } \frac{2}{5} \text{ of } \frac{2}{5} = \frac{3 \times (5 \times 5) \times (4 \times 19)}{5 \times (3 \times 4) \times (3 \times 5)} \\ &= \frac{3 \times 5 \times 5 \times 4 \times 19}{5 \times 3 \times 4 \times 3 \times 5} = \frac{1}{5} = 6\frac{1}{5}, \text{ Ans.} \end{array}$$

(dividing numerator and denominator by the factors 3, 5, 5, 4 common to both).

Examples LXIV.

Reduce the following compound fractions to simple ones :-

- 1. 1 of 1; 1 of 10; 16 of 2; 2 of 2; 2 of 1; 2 of 2;
- 2. 2 of \$; \$ of \$9 ; \$ of \$9 of a : \$ of \$9 of \$. \$ of \$ of \$6.
- 3. 1 of 1 of 2 of 2; 2 of 4 of 7 of V of 4; 4 of 14 of 4 of 49.
- 4. 4 of 2 of 4 of 3 of 5 of 6; 3 of 4 of 5 of 3 of 3 of 3 of 5.
- 5. 4 of + of 4 of 4 of 4 of 4. 6. 2 of 1 of 10 of 4 of 4 of 3 of 3.
- 7. F of \$ of \$ of \$ of \$6. 8. \$ of \$ of \$6 of \$ of \$5 of \$4.
- 9. \$ of 참 of 9 of 및 of 참 of 참 of 참 of 참.
- 10. 용 of 좀 of 말 of 용 of 말 of 용 of 를 of 등 of 날 of 나 of 날.
- 12. 14 of 44 of 35 of 67 of 24. 11. 1517 of 84 of 134.
- 13. 5% of % of 7% of 4% of 7%. 14. 5% of 3% of 1% of 3%.
- 15. 41 of the of 31 of \$ of \$ of 51 of the of \$ of 2 th. 51 of 32 of 4 of 32 of 4 of 5 of 5 of 5 of 5 of 5 of 1 of 2 of 4.
- 250. A fraction is in its lowest terms, or in its simplest form when there are no factors common to both numerator and
- minator are prime to each other.

denominator. This will be the case when the numerator and deno-251. To reduce a fraction to its lowest terms. RULE. Divide the numerator and denominator by their G. C. M.

Ex. Express the fraction ### in its lowest terms.

The G. C. M. of 825 and 960 is 15.

 $\frac{825}{060} = \frac{825 + 15}{060 + 15} = \frac{55}{64}$. Ans.

252. In many instances, it is unnecessary to find the G. C. M. at first, the fractions being reducible to lower terms by successive divisions of the numerators and denominators by common factors discovered by inspection, or by employing the tests of divisibility given in Art. 198.

Ex. Reduce #### to its lowest terms.

 $\frac{4968}{5904} = \frac{2484}{2952} = \frac{1242}{1476} = \frac{621}{738} = \frac{207}{246} = \frac{69}{82}$. Ans.

from three successive divisions of the numerator and denominator by 2, and then from two successive divisions by 3; and these are the terms which would have been obtained from dividing at once by 72 which is their G. C. M.

253. In examples like the following, it is convenient to break

up both the numerator and denominator into factors, and then cancel those which are common to both.

Note. It should be remarked that when a factor is cancelled it is to be replaced by 1 and not by 0.

Ex. Reduce $\frac{35 \times 63}{60 \times 27}$ to its lowest terms.

 $\frac{35 \times 63}{60 \times 77} = \frac{(5 \times 7) \times (3 \times 3 \times 7)}{(3 \times 5 \times 4) \times (7 \times 11)} = \frac{5 \times 7 \times 3 \times 3 \times 7}{3 \times 5 \times 7 \times 4 \times 11} = \frac{3 \times 7}{4 \times 11} = \frac{21}{44}. \quad Ans.$

Examples LXV.

- Reduce to their lowest terms (by inspection):—
- (1) 音; 看; 香; 香; 音; 程; 聲; 泰; 齊; 辭; 智; 報; 報
- (3) Ter 1 100; too; Tar; 100; 130; 130; 171; 171; 130; 2. Reduce the following fractions to their lowest terms:—
- $(1) \quad \frac{435}{957}; \frac{203}{315}; \frac{455}{1645}; \frac{256}{1024}; \frac{444}{703}; \frac{925}{1025}; \frac{768}{2592}; \frac{1476}{1764}$
- $(2) \quad \frac{3094}{3042}; \quad \frac{3444}{3556}; \quad \frac{5239}{6076}; \quad \frac{5565}{8533}; \quad \frac{7568}{9504}; \quad \frac{1775}{2350}; \quad \frac{3565}{4930}; \quad \frac{9050}{17919}; \quad \frac{3665}{17919}; \quad \frac{3665}{179$
- (3) $\frac{1261}{1649}$; $\frac{6435}{7293}$; $\frac{1236}{4764}$; $\frac{6006}{8008}$; $\frac{9504}{10692}$; $\frac{7497}{15729}$; $\frac{48510}{49005}$.
- $(4) \quad \frac{8991}{10989}; \frac{12540}{21945}; \frac{13478}{16701}; \frac{8398}{29393}; \frac{43365}{44688}; \frac{13667}{14186}; \frac{217800}{245025};$
- (5) $\frac{11050}{35581}$; $\frac{20301}{33633}$; $\frac{714285}{999999}$; $\frac{109375}{1000000}$; $\frac{135795}{222210}$; $\frac{99715}{113900}$.
- (6) $\frac{95469}{359784}$; $\frac{180194}{1973594}$; $\frac{256417}{7006987}$; $\frac{1854432}{3171276}$; $\frac{1832051}{2592525}$; $\frac{496606401}{1006110363}$.
 - 1) $\frac{18 \times 32}{27 \times 52}$; $\frac{16 \times 45}{24 \times 75}$; $\frac{21 \times 24}{56 \times 84}$; $\frac{45 \times 70 \times 15}{81 \times 90 \times 100}$; $\frac{48 \times 64 \times 49}{96 \times 88 \times 63}$
- $(2) \quad \frac{51 \times 39 \times 42}{68 \times 52 \times 70}; \quad \frac{19 \times 23 \times 26 \times 56}{57 \times 92 \times 78 \times 98}; \quad \frac{85 \times 84 \times 38}{102 \times 154 \times 95}; \quad \frac{76 \times 87 \times 65}{114 \times 145 \times 143};$

254. To reduce two or more fractions having different denominators to equivalent fractions having a common denominator.

Rule. Multiply each numerator by all the denominators except one placed under it, for the new numerator: and multiply all the denominators together for the common denominator. Ex. Express $\frac{1}{2}$, $\frac{3}{2}$ and $\frac{3}{7}$ as equivalent fractions with a common denominator.

... the equivalent fractions are \$\frac{1}{40}, \frac{1}{40}\$ and \$\frac{1}{40}\$. Ans.

255. If two or more of the denominators have a common measure, the equivalent fractions may be expressed in simpler terms than obtainable by the above Rule, and having a least common denominator (L. C. D.) by the following Rule.

RULE. Find the L. C. M. of the denominators: this will be the leaves common denominator. Then divide the L. C. M. so found by the denominator of each fraction, and multiply each quotient so found into the numerator of the fraction which belongs to it for the new numerator of that fraction.

Note. Before applying the above Rules, reduce mixed numbers to improper fractions, and compound fractions to simple ones; moreover, if the L. C. D. be required, the given fractions should be reduced to their lowest terms.

Ex. Reduce $\frac{1}{2},\frac{1}{4}\frac{1}{2}$ and $\frac{n}{20}$ to equivalent fractions having the least common denominator.

The L. C. M. of 5, 12 and 20 is 60, which is here the L. C. D.

$$60+5=12; 60+12=5; 60+20=3.$$

$$4 = \frac{4 \times 12}{5} = \frac{48}{5 \times 12} = \frac{48}{60}, \frac{11}{12} = \frac{11 \times 5}{12 \times 5} = \frac{55}{60}; \frac{3}{20} = \frac{3 \times 3}{20 \times 3} = \frac{9}{60}.$$

Hence, the equivalent fractions are \$\frac{1}{40}\$, \$\frac{1}{40}\$ and \$\frac{1}{40}\$. Ans.

256. Similarly we can reduce fractions to equivalent ones

having a least common numerator (L. C. N.).

Ex. Reduce \$\frac{1}{2}, \frac{1}{2} \text{ and \$\frac{1}{2}\$ to fractions having a least common

numerator.

The 1. C. M. of 5, 4, 8 and 16=80, which is here the L. C. N. $80 \div 5 = 16 : 80 + 4 = 20 : 80 + 8 = 10 : 80 + 16 = 5$.

$$\begin{array}{c} \vdots \quad \frac{5}{6} = \frac{5 \times 16}{6 \times 16} = \frac{80}{96} \vdots \frac{4}{9} = \frac{4 \times 20}{9 \times 20} = \frac{80}{180}; \\ \frac{8}{9} = \frac{8 \times 10}{9 \times 10} = \frac{80}{90} : \frac{16 \times 5}{17} = \frac{80}{17 \times 5} = \frac{80}{85}. \end{array}$$

., the fractions with a L. C. N. are \$6, 780, 20, 20, 20. Ans.

Examples LXVI.

1.	R	educ	e	to	equ	ivale	at i	fract	ions	with a	cc	m	mon	deno	mi	nat	or	:-

(1) 名表 (2) 与条 (3) 名音 (4) 表 5年 (5) 名音音 (6) 1, 2, 2, 1h. (7) \$, \$, \$, \$, \$, \$, \$.

(9) \$, 25, 315. (10) 7. \$, 1010, 261. (11) \$ of 10, 11 of 51, 1 of 11. 2. Reduce the fractions in each of the following sets to

equivalent fractions, having the least common denominator :-

(1) 弘惠章 (2) 录录录 (3) 契, 器 (4) 品, 近, 岳 (5) 元, 张 器 (6) 系, 岳, 岳, (7) 男, 系 社 (8) 易 录 系 系

(9) 14, 35, 14, 15, 15, (10) 14, 12, 13, 13, 32, 32, 32,

(12) 11, 31, 41, 61 (11) 1, 4 of 1 of 5, 1 of 3 of 21, 4, 5. (13) 31%, 26, 132, 14, 1313. (14) \$\frac{1}{2}\$ of 2\$\frac{1}{2}\$, \$\frac{1}{2}\$ of 3\$\frac{1}{2}\$.

3. Reduce the following fractions to equivalent ones with the least common numerator :---

(2) \$, 8, 11, 12. (3) 7/2, 20, 18, 73. (I) 1, 8, 1, F. (5) \$7, 12, 44, 84. (6) 4, 8, 15, 18, 18, 18, (4) 2, 74, 20, 31.

257. To compare the magnitudes of different fractions.

(1) RULE. Reduce the fractions to equivalent ones with the least common denominator (L. C. D.), and then compare the numerators so obtained. That fraction which has the greatest numerator is the greatest, and that which has the least is the least.

Ex. 1. Find the greatest and least of the fractions 2, 4 and 11 The L. C. M. of the denominators = 504.

504+0=56;504+8=63;504+14=36.

Hence 11 is the greatest and 4 is the least. Ans.

Ex. 2. Arrange 4, 11, 14 and 4 in order of magnitude.

The L. C. M. of the denominators = 180. 180 + 5 = 36; 180 + 12 = 15; 180 + 15 = 12; 180 + 9 = 20.

 $\therefore \frac{4}{5} = \frac{4 \times 36}{5 \times 36} = \frac{144}{180}; \frac{11}{12} = \frac{11 \times 15}{12 \times 15} = \frac{165}{180};$

 $\frac{12}{15} = \frac{13 \times 12}{15 \times 12} = \frac{156}{180}; \frac{8}{9} = \frac{8 \times 20}{9 \times 20} = \frac{160}{180}.$

Hence the fractions arranged in order of magnitude stand thus : -14. 8. 12 and 4. Ans.

- (2) Fractions may also be compared by reducing them to a least common numerator (L. C. N.). In this case, the new fraction that has the least denominator is the *greatest*, and that which has the greatest denominator is the *least*.
 - Ex. Find the greatest and the least of \$\frac{2}{3}\$, \$\frac{3}{16}\$, \$\frac{7}{16}\$ and \$\frac{3}{16}\$.

 The L. C. M. of the numerators = 126.

126+2=63; 126+3=42; 126+7=18; 126+9=14.

$$\frac{2}{5} = \frac{2 \times 63}{5 \times 63} = \frac{126}{315}; \frac{3}{10} = \frac{3 \times 42}{10 \times 42} = \frac{126}{420}$$

 $\frac{7}{15} = \frac{7 \times 18}{15 \times 18} = \frac{126}{270}; \frac{9}{16} = \frac{9 \times 14}{16 \times 14} = \frac{126}{224}.$

Hence $\frac{1}{10}$ is the greatest and $\frac{1}{10}$ is the least. Ans.

258. The defect of a fraction from I is called its complement.

Thus, \frac{1}{4} and \frac{3}{6} are respectively the complements of \frac{4}{4} and \frac{7}{6}.

- (3) Fractions may also be compared by taking their complements, provided that each of the complements has I for its numerator. The greatest and least fractions will be those that have the least and the greatest complement.
 - Ex. Find the greatest and the least of the fractions $\frac{4}{5}$, $\frac{24}{25}$, and $\frac{4}{5}$. The complements of these fractions are $\frac{1}{5}$, $\frac{1}{45}$ and $\frac{4}{5}$ respectively. Now, of these complements $\frac{1}{25}$ is the least and $\frac{1}{5}$ the greatest;
- . 34 is the greatest and 4 is the least. Ans.
- (4) Fractions may also be compared by the method illustrated by the following example.
 - Ex. Arrange in order of magnitude 3, 31 and 15.

$$\frac{3}{7} = \frac{3+3}{7+3} = \frac{1}{2\frac{1}{4}}; \frac{5}{21} = \frac{5+5}{21+5} = \frac{1}{4\frac{1}{3}}; \frac{6}{19} = \frac{6+6}{19+6} = \frac{1}{3\frac{1}{6}}.$$
 (Art. 242.)

The given fractions $=\frac{1}{2\frac{1}{3}}$, $\frac{1}{4\frac{1}{3}}$, $\frac{1}{3\frac{1}{3}}$ respectively. Of these $\frac{1}{2\frac{1}{3}}$ is

- the greatest and $\frac{1}{4z}$ is the least, for they have respectively the least and greatest denominators.
 - .. the order of magnitude is \$, fo and \$. Ans.

Examples LXVII.

1. Which is the greater? (by the first method).

2. Which is the less? (by the second method.)

$$\frac{7}{18}$$
 or $\frac{17}{13}$; $\frac{1}{6}$ or $\frac{1}{12}$; $\frac{4}{64}$ or $\frac{55}{162}$; $\frac{21}{63}$ or $\frac{1}{14}$; $\frac{3}{12}$ of $\frac{6}{9}$ or $\frac{1}{4}$ of $\frac{6}{7}$; $\frac{13}{19}$ or $\frac{15-8}{19-8}$

3. Which is the greatest, and which is the least of the following?

(1)台灣早年學學年報報(中華)

(2) \$, \$, \$, \$4; \$, \$, \$, \$6; \$, \$5, \$2, \$5; \$, \$6, \$2, \$2, \$5.

(3) \(\frac{1}{2}\) of \(\frac{1

(5) \$4, \$4, \$5, \$5, \$6; \$6, \$5, \$5, \$4; \$6, \$5, \$5+6.

4. Arrange in order of magnitude the following :-

(1) \$\frac{1}{2}, \frac{1}{2}, \frac{1}{2},

(6) 14, 14, 13+15.

(7) \$, \$, \$, \$, \$, 5+6+7+9

5. Arrange in order of magnitude :- (by the third method.)

(1) \$\frac{1}{2}\$, \$\

6. Arrange in order of magnitude:—(by the fourth method).

(4) $\frac{1}{15}$, $\frac{1}{15}$, $\frac{1}{25}$, $\frac{2}{5}$, $\frac{2}{5}$, $\frac{2}{5}$, $\frac{2}{5}$, $\frac{1}{5}$, $\frac{1}{15}$, $\frac{1}{15}$, $\frac{1}{15}$. (6) $\frac{3}{5}$, $\frac{1}{5}$, $\frac{1}{15}$, $\frac{1}{15}$.

7. Find a fraction intermediate in value to $\frac{2}{5}$ and $\frac{4}{7}$ whose denominator is 84; to $\frac{2}{5}$ and $\frac{4}{7}$ whose denominator is 720.

III. ADDITION OF FRACTIONS.

259. To find the sum of two or more given fractions.

(1) If the given fractions have the same denominator. RULE. Add the numerators of the given fractions together for the numerator of the sum, and take their denominator for its denominator.

Ex. Find the sum of \$, 2 and \$.

Here, $\frac{1}{7} + \frac{6}{7} + \frac{8}{7} = \frac{4+5+8}{7}$ $= U = 2\frac{6}{7}$ For 4 sevenths + 5 sevenths + 8 sevenths = $U = 2\frac{6}{7}$.

(2) If the given fractions have different denominators.

RULE. Express the fractions with a least common denominator; add together the new numerators for the numerator of their sum, and take he least common denominator for its denominator

The sum should always be expressed in its lowest terms; and, if an improper fraction, should be reduced to a mixed number.

Ex. Find the sum of \$, \$, \$ and \$.

The L. C. M. of the denominators = 24.

$$\frac{2}{3} = \frac{2 \times 8}{3 \times 8} = \frac{16}{24}; \ \frac{3}{4} = \frac{3 \times 6}{4 \times 6} = \frac{18}{24};$$

$$\frac{5}{6} = \frac{5 \times 4}{6 \times 4} = \frac{20}{24}$$
; $\frac{7}{8} = \frac{7 \times 3}{8 \times 3} = \frac{21}{24}$.

: the sum =
$$\frac{16}{24} + \frac{18}{24} + \frac{20}{24} + \frac{21}{24} = \frac{16 + 18 + 20 + 21}{24}$$

= $\frac{75}{24} = \frac{25 \times 3}{8 \times 3} = \frac{25}{8} = 3\frac{3}{8}$. Ans.

All fractions should be reduced to their lowest terms, improper fractions to whole or mixed numbers, and compound fractions to simple ones, before the application of the Rule.

261. If any one of the given numbers be whole or mixed numbers, add together the whole numbers as in simple addition and the fractional parts by the Rule given above.

Ex. Add together 5 %, 12, 231 and 7 of 35.

Here, $\frac{1}{3} = \frac{1}{3}$; $2\frac{3}{3} = 2\frac{7}{3}$; $\frac{3}{3}$ of $3\frac{3}{3} = \frac{3}{3}$ of $\frac{1}{3} = \frac{1}{3} = 2\frac{3}{3}$.

: sum of the fractions = $5\sqrt{r} + 3\frac{1}{6} + 2\frac{7}{16} + 2\frac{7}{16}$

$$= (5+3+2+2) + (\frac{5}{12} + \frac{1}{6} + \frac{7}{16} + \frac{1}{4})$$

$$= 12 + \frac{20 + 8 + 21 + 36}{48}$$

$$= 12 + 5 = 12 + 1 = 13 = 13 = 5. \quad Ans.$$

Examples LXVIII.

1. Add together orally the following fractions :-

(1) #+#: \$+3: \$+3: \$+9: #+5+8: #+8+8: #++8: #++8: \$5+34.

(2) 1+1; 1+1; 1+1; 1+1; 1+1; 1+1; 1, 5+4; 18+4; 18+4; 1

(3) 1+1+1; 1+1+1=; 1+1+1; 1+1+1; 1+1+1+1=; 1+1+1+1=; (4) 31+21; 42+31; 12+32+21; 31+41+774

2. Find the values of the following :-

(I) \$6+ £6; \$+\$; \$+\$; \$+\$; \$+\$; \$+\$; \$+\$c; \$+\$c (2) 15+71; 24+13,5; 51+124; 37十+2414; 74+44.

(3) ** + ** ; 41 + *1; 57 + 88 ; ** + ** ; ** + *1 ; 13 + 28.

(4) 2+2+2; 1+2+3; 3+2+3; 3+4+4; 2+6+3; 2+6+3;

(5) \$1+45+87; 21+38+58; 81+136+2747; 15+31+11+31.

(6) 2+-1+11+88: 110+828+898: 128+888+881.

(8)
$$1^{2}_{1} + 6 + \gamma_{1}^{2} + 3\delta$$
. (9) $3^{2}_{2} + 2^{2}_{3} + \gamma_{1}^{2} + 7\delta$. (10) $2^{2}_{3} + 3^{2}_{3} + 4^{2}_{3} + 5\delta^{2}_{3}$. (11) $3^{2}_{2} + 7^{2}_{3} + 8^{2}_{3} + 4\delta$.

(12)
$$1\frac{1}{1} + 2\frac{1}{1} + 3\frac{1}{1} + 3\frac{1}{1} + 4\frac{1}{1}$$
. (13) $4\frac{2}{1} + 8\frac{2}{1} + 3\frac{1}{1} + 8\frac{1}{1}$.

(14)
$$\frac{1}{11}$$
 of $\frac{2}{3}$ of $\frac{1}{2} + \frac{2}{3}$ of $\frac{1}{3} + \frac{2}{3}$ of $\frac{1}{3} + \frac{2}{3} + \frac{2}{3}$.
(15) $\frac{1}{3} + \frac{2}{3} + \frac{2}{3} + \frac{1}{3} + \frac{2}{3} + \frac{2}{3}$ of $\frac{2}{3} + \frac{2}{3} + \frac{2}{3}$ of $\frac{2}{3} + \frac{2}{3} +$

(17)
$$275\frac{1}{8} + 62\frac{11}{120} + 1031\frac{1}{8} + \frac{1}{8}$$
 of 4150.

(18)
$$\frac{1}{3} + \frac{3}{6} + \frac{3}{6} + \frac{4}{6} + \frac{4}{16} + \frac{1}{16} + \frac{1}{6} + \frac{3}{6}$$
. (19) $\frac{1}{6} + \frac{3}{6} + \frac{1}{6} + \frac{2}{16} + \frac{3}{6} + \frac{1}{6} + \frac{3}{6} +$

(21) 1 of \$+\$ of \$1+\$ of (1+12)+\$ of (7+\$).

IV. SUBTRACTION OF FRACTIONS.

262. To subtract one fraction from another fraction.

(1) When the given fractions have the same denominator.

RULE. Find the difference of the numerators of the given fractions for the numerator of the remainder, and take their denominator for its denominator.

Ex. Subtract & from 19.

Here,
$$\frac{10}{17} = \frac{4}{17} = \frac{10-4}{17}$$
For, 10 seventeenths -4 seventeenths
$$= (10-4) \text{ seventeenths} = 6 \text{ seventeenths}$$

$$= \frac{6}{17}$$

(2) When the given fractions have different denominators.

RULE. Reduce the fractions to a least common denominator : subtract the less numerator from the greater ; under the remainder place the least common denominator, and the result, properly reduced, will be the required difference.

Note. Before applying the Rule, reduce fractions to their lowest terms, improper fractions to whole or mixed numbers, and compound fractions to simple ones.

(1) The L. C. M. of 18 and 24 = 72.

(2) Here,
$$\frac{7}{8}$$
 of $\frac{3}{4} = \frac{21}{89}$, and $\frac{2}{8}$ of $\frac{5}{18} = \frac{5}{84}$. Also L. C. D. = 96.

... their difference
$$=\frac{21}{3^2} - \frac{5}{24} - \frac{63-20}{96} = \frac{43}{96}$$
. Ans.

263. Additions and subtractions of fractions may be performed in any order.

Thus,
$$7\frac{9}{4} - 4\frac{4}{7} = (7 + \frac{3}{4}) - (4 + \frac{4}{7}) = 7 + \frac{3}{4} - 4 - \frac{4}{7}$$
, (Art. 107)
= $(7 - 4) + (\frac{3}{4} - \frac{4}{7}) = 3 + \frac{3}{4} - \frac{4}{7}$.

Hence, if either of the given fractions be a whole or mixed number, it is most convenient to take separately the difference of the integral parts and that of the fractional parts, and then add the two results together.

Here,
$$3\frac{3}{5} - 2\frac{1}{6} = (3 + \frac{3}{5}) - (2 + \frac{1}{6}) = (3 - 2) + (\frac{5}{5} - \frac{1}{6})$$

Here,
$$5\frac{1}{3} - 2\frac{4}{7} = (4 + 1 + \frac{1}{3}) - (2 + \frac{4}{7}) = (4 - 2) + (1 + \frac{1}{3} - \frac{4}{7})$$

= $2 + (\frac{4}{3} - \frac{4}{3}) = 2 + (\frac{4}{3} \frac{4}{7} - \frac{1}{3} \frac{4}{7}) = 2 + \frac{1}{3} \frac{4}{7} = 2 + \frac{1}{3} \frac{4}{7}$ Ans.

364. The following peculiarities in Subtraction of Fractions should be carefully noticed.

(I) When both the fractions have a common numerator.

RULE. Multiply the difference of the denominators by the common numerator for the new numerator, and take the product of the denominators for the new denominator. The resulting fraction is the required difference.

Ex. 1.
$$\frac{8}{11} - \frac{8}{13} = \frac{(13-11)\times 8}{13\times 11} = \frac{2\times 8}{13\times 11} = \frac{16}{143}$$
. Ans.

(2) To subtract fractions when both have 1 for numerator.

RULE. Find the difference between the denominators for a new numerator and multiply the denominators for a new denominator. The resulting fraction is the required difference.

Ex. 2.
$$\frac{1}{8} - \frac{1}{8} = \frac{9-8}{8 \times 9} = \frac{1}{72}$$
.

(3) To subtract a proper fraction from unity.

RULE. Subtract the numerator from the denominator for the new numerator, and underneath place the given denominator. The resulting fraction is the required difference.

Ex. 3.
$$1 - \frac{5}{11} = \frac{11 - 5}{11} = \frac{6}{11}$$
. Ans.

(4) To subtract a mixed number from an integer.

RULE. Subtract the fractional part from unity as in (3) and the integral part from the integer diminished by unity.

Ex. 4.
$$7-3\frac{1}{7}=(6-3)+(1-\frac{1}{7})=3\frac{3}{7}$$
. Ans.

(5) To subtract a mixed number from another, when the fractional part of the subtrahend is greater than that of the minuend.

RULE. Subtract the subtrahend (composed of the integral and fractional part) from the integral part of the minuend as in (4) and to this difference add the fractional part of the minuend.

265. An expression made up of additions and subtractions of tractions may be made equal to the difference of two sums.

Thus,
$$5\frac{3}{4} - 1\frac{4}{3} + 2\frac{5}{4} + \frac{3}{4} - \frac{3}{4} = (5\frac{3}{4} + 2\frac{5}{4} + \frac{3}{4}) - (1\frac{5}{4} + \frac{3}{4})$$
. (Art. 107).

Examples LXIX.

- 1. Perform orally the following subtractions :-(1) B-1; B-2; b-2; b-1; b-1; b-1; b-1; b-1; b-1;
- (2) 1-1;2-1;2-4; 1-2; 1-2; 1-2; 2-1; 2-2; 4-4.
- (3) $1 \frac{7}{4}$; $3 \frac{4}{4}$; $2\frac{1}{4} 1\frac{1}{4}$; $4\frac{6}{4} 3\frac{1}{4}$; $6\frac{1}{4} 4\frac{1}{4}$; $7\frac{7}{4} 4\frac{1}{4}$; $4\frac{6}{4} 2\frac{1}{4}$.
- 2. Perform the following subtractions :-
 - (1) 4-1; 1-2; 4-2; 1-4; 12-4; 12-4;
- (2) 13 -13 ; 31 -13 ; 84 -1 ; 91 -21 ; 34 -21 ; 84 -54.
- (3) $19^{\frac{9}{4}} 13^{\frac{1}{13}}$; $18^{\frac{1}{13}} = 17^{\frac{1}{13}}$; $1000 384^{\frac{1}{13}}$; $279^{\frac{9}{4}} 168^{\frac{6}{8}}$.
- (4) 25 of 16% 18 of 35; \$ of 15 of 25 16 of 5; 77 of 101 22 of 41.
 - 3. Find the values of :-
 - (1) 8-9+8-1. (2) 15 - 14 + 15 - 11.
 - (4) $\frac{1}{2} \frac{2}{8} + \frac{7}{15} \frac{1}{10} + \frac{2}{8} + \frac{2}{8} \frac{7}{10} + \frac{2}{8}$ (3) 1+8-1+8-4. (6) $3\hat{\phi}_{x} - \hat{\phi}_{y} - 1\hat{\phi}_{x} + \hat{\phi}_{y}$.
- (5) 13\$ 0\$ 1\$\tilde{\Phi}\$.
- (7) 7\$+6\$-34-23++31. (8) 31+24-(51+12)+24.
- (9) 101 (4#+6+1+7++(8+-6+1). (10) 65 of 2.4 (67-2.4). (11) 25-(4+10++3+1+10++3+202. (12) 2 of 5-7 of 33+5 of 38.
- (13) 2211-(921-715+1 of 15)+2 of 31.
- (14) 83 317 + 25 of 15 of 41 (511 25).
- (15) $47\sqrt[3]{x} (3\sqrt[3]{x} + 31\sqrt[3]{x} + 2\sqrt[3]{x}) + 6\sqrt[3]{x} (2\sqrt[3]{x} 1\sqrt[3]{x}),$

V. MILETPLICATION OF FRACTIONS.

266. To multiply a fraction by a whole number. [We have already' given an outline of this method in Arts. 241 and 244. Now, we propose to treat it at length.]

RULE Multiply the numerator by the whole number for the new numerator, and leave the denominator unchanged. The resulting fraction should always be expressed in its lowest terms, by cancelling those factors that are common to the multiplier and to the denominator of the fraction.

ominator of the fraction.

Thus,
$$8 \times \sqrt[6]{9} = \frac{8 \times 5}{9} = \frac{40}{9}$$

$$= 4\frac{8}{9}$$

$$= 4\frac{8}{9}$$
For $8 \times \frac{4}{9} = 8 \times 5$ minths $= \frac{40}{9} = \frac{8 \times 5}{9}$.

Also,
$$9 \times \frac{4}{15} = \frac{3 \times 3 \times 4}{3 \times 5} = \frac{3 \times 4}{5} = \frac{15}{5} = 2\frac{9}{5}$$
.

267. To multiply a mixed number by an integer.

RULE. Either reduce the mixed number to an improper fraction and multiply as above, or multiply the integral part and the fractional part separately, and add the two products.

Thus, (1) 64 × 3= 14 × 3-12 = 20 }.

(2)
$$6\frac{4}{3} \times 3 = 6 \times 3 + \frac{4}{3} \times 3 = 18 + \frac{14}{3} = 18 + 2\frac{3}{3} = 20\frac{4}{3}$$
.

268. To multiply a proper fraction differing very little from or a mixed number differing very little from the next superior integer by a whole number, we have recourse to such artifices as is explained in Art. 264.

Thus, (1)
$$\frac{1}{100} \times 35 = (1 - \frac{1}{100}) \times 35 = 35 - \frac{35}{100} = 35 - \frac{3}{20} = 34\frac{15}{10}$$
.

(2)
$$15\frac{1}{15} \times 12 = (16 - \frac{1}{15}) \times 12 = 192 - \frac{1}{15} = 192 - \frac{4}{15} = 191\frac{1}{2}\frac{1}{15}$$
.

(3)
$$99\frac{18}{18} \times 46 = (100 - \frac{1}{18}) \times 46 = 4600 - \frac{18}{18} = 4600 - 3\frac{2}{18} = 4506\frac{5}{18}$$

Examples LXX.

1. Multiply orally :-

- (1) 1 by 3; 1 by 2; 2 by 3; 2 by 4; 2 by 5; 2 by 7; 2 by 3; 4 by 2. (2) 1 by 7; 1 by 21; 7 by 100; 1 by 25; 1 by 28; 1 by 30.
 - 2. Multiply:-
- (1) 14 separately by 55, 88, 90. (2) 4 separately by 12, 36, 48, 49.
- (3) 116 32, 128, 168. (4) 366 11, 15, 21, 132. (5) 313 ····· ·· 55, 77, 110. (6) 225 ···· ·· 13, 39, 42, 117.
- (7) 150% by 12 ; 1625% by 23; 4%% by 23; 1727% by 34; 3580 } by 47
- 8. Find the product of :--(1) 99 % separately by 6, 8, 15, 18, 25. (2) 999 % by 99, 550.
- (3) 499\$\$\$.....25, 50, 75, 100, 150, 200, 250.
- (4) 74% by 43; 99% by 324; 999% by 999.

269 The meaning of Multiplication as given in Art. 59 is not applicable when the multiplier is a fraction. Hence, to suit our purpose we make the following definition.

"To multiply by a fraction is to take that fraction of the multiplicand." But ξ of $\frac{1}{2} = \frac{3 \times 5}{8 \times 7}$ by Art. 249; therefore $\frac{1}{2} \times \frac{5}{8} = \frac{3 \times 5}{8 \times 7}$.

Thus, to multiply \$ by \$, we take \$ of \$ by the new definition.

Hence the Rule.

270. To multiply a fraction by a fraction.

RULE. Multiply together the respective numerators and denominators, reduced to fractional forms if necessary; and the fraction thence arising will be the product, which may be simplified by striking out any factor common to numerator and denominator.

Ex. z. Multiply ? by ?.

Here,
$$\frac{8}{8} \times \frac{8}{9} = \frac{3 \times 7}{9 \times 8} = \frac{2 \times 7}{9 \times 24}$$
 For, if $\frac{8}{9}$ be multiplied by 7, the product will be $\frac{1}{3}$ (Arr. 241); and the product will be $\frac{1}{3}$ (Arr. 241); being 8 times as great as $\frac{1}{3}$, the multiplier above used is $\frac{1}{3}$ the furtherefore be 8 times too

8 times too large, and the product $\frac{1}{6}$ will therefore be 8 times too large also: whence, the product required must be $\frac{1}{6}$ + 8 = $\frac{1}{6}$. (Art. 241) = $\frac{1}{6}$.

(1) Product =
$$\frac{36}{25} \times \frac{145}{25} = \frac{99 \times 145}{25 \times 54} = \frac{11 \times 9 \times 5 \times 29}{5 \times 5 \times 6 \times 9}$$

$$=\frac{11\times29}{5\times6}=\frac{810}{50}=10\frac{10}{30}$$
. Ans.

(2) Product=
$$\frac{49}{9} \times (\frac{17}{9} \times \frac{15}{9}) = \frac{49 \times 17 \times 15}{9 \times 7 \times 17} = \frac{49 \times 15}{9 \times 7}$$

$$= \frac{7 \times 7 \times 3 \times 5}{3 \times 3 \times 7} = \frac{7 \times 5}{3} = \frac{3}{8} = 11\frac{3}{2}. \ Ans.$$

271. To find the continued product of three or more fractions.

RULE. Multiply all the numerators together for the numerator of the continued product, and all the denominators for its denominator; cancelling all the factors common to numerator and denominator before obtaining the final result.

Ex. 1. Find the continued product of \$\frac{a}{4}\$, \$\frac{a}{4}\$ and \$\frac{a}{4}\$.

Here, Product =
$$\frac{3 \times 5 \times 8}{4 \times 7 \times 15} = \frac{3 \times 5 \times 2 \times 4}{4 \times 7 \times 3 \times 5} = \frac{2}{7}$$
. Ans.

$${\rm Product} = \frac{5}{6} \times \frac{35}{11} \times \frac{96}{5} \times \frac{11}{56} = \frac{5 \times (5 \times 7) \times (2 \times 2 \times 2 \times 2 \times 2 \times 3) \times 11}{(3 \times 2) \times 11 \times 5 \times (2 \times 2 \times 2 \times 7)} \times \frac{11}{12}$$

$$=\frac{5\times 2}{1}=\frac{10}{1}=\frac{10}{1}$$
. Ans.

Examples LXXI.

Multiply orally :- \$\frac{1}{2}\$ separately by \$\frac{1}{2}\$, \$\frac{1}{2}\$, \$\frac{1}{2}\$.
 \$\frac{1}{2}\$ separately by \$\frac{1}{2}\$, \$\frac{1}{2}\$, \$\frac{1}{2}\$.

(3) \$ \$\frac{1}{2}, \frac{1}{2}, \frac{1}{2}. \quad (4) \frac{1}{1} \quad ... \quad \tau_{23} \frac{1}{2}, \frac{1}{2}, \frac{1}{2}.

2. Multiply :-

- (1) } by } ; } by \$; } by \$; } by \$; 15 by \$; 45 by \$; 45 by \$;
- (2) 14 by 18; 4 by 21; 13 by 15; 28 by 26; 75 by 24.
- (3) 2% by 7%; 8% by 10½; 6% by 14½; 15½ by 3%; 6% by 2½.
 (4) 2% by % of % of %; 13% of 7½ by % of % of 12½; 3% of 42 by 2½%.
- (4) $\frac{7}{8}$ by $\frac{7}{8}$ by $\frac{7}{8}$ of $\frac{7}{8}$ by $\frac{7}{8}$ by $\frac{7}{8}$ by $\frac{7}{8}$ of $\frac{7}{8}$ by $\frac{7}{8}$ of $\frac{7}{8}$ by $\frac{7}{8}$ of $\frac{7}{8}$ by $\frac{7}{8}$ of $\frac{7}{8}$ by $\frac{7}{8}$ by
 - 3. Find the values of :-
- (1) #×#×4=: #ן×4=; #×#×#; #×164×&; 44×4×4. (2) #×#×4×4: #×#×#; #×#×#; #××#×#; #×164; #of 14×3×#.
- (3) 8×28×314×518×618, 1218×818×18×618 of 14×21.
- (4) 14 of 6 × 15 of 21 of 8 × 125 of 65 of 17 × 57.
- (5) $4\frac{1}{2}$ of $3\frac{1}{8}$ of $7\frac{1}{10} \times \frac{2}{3}$ of $1\frac{1}{2} \times 2\frac{2}{3}$ of $4\frac{2}{3}$ of $2\frac{2}{9} \times \frac{1}{1000}$

4. Find the continued product of :-

(1)
$$\frac{49}{133}$$
, $\frac{76}{75}$ and $\frac{28}{98}$.

(3)
$$\frac{17}{24}$$
, $\frac{384}{391}$, $\frac{851}{864}$, and $\frac{1584}{1591}$.

(4)
$$\frac{5687}{319}$$
, $\frac{667}{22011}$, $\frac{221}{629}$ and $\frac{72816}{8528}$.

(5)
$$\frac{324}{361}$$
, $\frac{1444}{1296}$, $\frac{441}{529}$ and $\frac{2116}{1764}$. (6) $\frac{36}{65}$, $\frac{35}{132}$, $\frac{39}{108}$ and $\frac{75}{144}$

Simplify:—

(1) (3\(\hat{1}\) + 2\(\hat{1}\) × 10\(\hat{1}\); 3\(\hat{1}\) + 2\(\hat{1}\) × 10\(\hat{1}\); (\(\frac{1}{2}\) + \(\frac{1}{3}\) + \(\frac{1}{4}\) of \(\frac{1}{4}\).

(2) $(\frac{1}{2} \times \frac{3}{8} + \frac{3}{7} \times \frac{3}{8}) - (\frac{9}{7} \times \frac{5}{8} - \frac{1}{8} \times \frac{1}{12}) : \frac{1}{2} \text{ of } (6\frac{1}{2} + 2\frac{3}{8} - 3) : (\frac{1}{2} + \frac{1}{8}) \times (\frac{1}{2} - \frac{3}{4}).$

(3) (19\$ - 3\$) × (3\$ - 2\$); 19\$ - 3\$ × 3\$ - 2\$; 19\$ - 3\$ × (3\$ - 2\$).

(4) {(\frac{1}{2} + \frac{1}{2}) of (1\frac{1}{2} + 2\frac{2}{4}) \times \{(2\frac{1}{4} - 1\frac{1}{2}) of (3\frac{1}{4} - \frac{2}{4})\}.

(5) \(\frac{1}{4}\) \(\frac{1}{2}\) \(\frac{1}{4}\) \(\frac{1}{4}

(6) (1% of 25-31%)×(5% of 42-34 of 3%)×%7 of 27×2.

VI. DIVISION OF FRACTIONS.

272. To divide a fraction by a whole number.

(We have already given an outline of this method in Arts. 241 and 244. Now, we propose to treat it at length).

RULE. Multiply the denominator by the whole number, and leave the numerator unaltered. The resulting fraction should always be reduced to its lowest terms by removing all factors common to numerator and denominator.

Thus,
$$\frac{35}{36}$$
 + 28 = $\frac{35}{36 \times 28}$ = $\frac{7 \times 5}{36 \times 7 \times 4}$ = $\frac{5}{36 \times 4}$ = $\frac{5}{144}$

273. The meaning of Division as given in Art. 87 is not applicable when the divisor is a fraction. Hence, Division may be extended to express the finding of the fraction, the product of which and the divisor is the dividend and the quotient shows what part or hart the dividend is of the divisor.

Thus, to divide # by #, we have, by definition,

quotient×5=5;

multiply each term of this equality by 3,

therefore quotient $x = \frac{1}{2} \times \frac{1}{2} = \frac{1}{4} \times \frac{1}{2}$, or quotient $= \frac{3}{4} \times \frac{1}{4}$.

that is, \$+\$=\$x\$. Hence the rule.

274. To divide a fraction by a fraction.

RULE. Multiply the dividend by the divisor inverted, and the result will be the quotient, which may be reduced to its lowest terms by cancelling any factors common to numerator and denominators or, which is the same thing, invert the divisor, and then proceed by the Rule for the Multiplication of Fraction.

Ex. Divide # by #.

Here, #+ ! = # x !

= 18. Ans.

For, if \(\frac{1}{2}\) be divided by \(\frac{4}{2}\), the quotient is \(\frac{1}{2}\) in (Art. 241); but this quotient is \(\frac{1}{2}\) times too \(\frac{5}{2}\) times too \(\frac{5}{2}\) times too \(\frac{5}{2}\) read; whence the quotient will be \(\frac{1}{2}\) \(\frac{5}{2}\) \(\frac{1}{2}\) (Art. 241).

275. If the dividend be a whole number, or if dividend or divisor or both be mixed numbers, reduce them to improper fractions, and compound fractions to simple ones before the application of the Rule.

Ex. Divide 1_{11}^{1} by 5_{1}^{4} ; and 7_{8}^{2} by 3_{14}^{4} of 2_{10}^{1} .

(i)
$$1\frac{1}{14} + 5\frac{5}{7} = \frac{15}{14} + \frac{40}{7} = \frac{15}{14} \times \frac{7}{40} = \frac{3 \times 5 \times 7}{7 \times 2 \times 5 \times 8} = \frac{3}{2 \times 8} = \frac{3}{16}$$
. Ans.

978. Numbers connected by of are considered a single number. The student should carefully notice the difference in meaning hetween $2j+i\frac{1}{2}\times\frac{3}{2}$ and $2j+i\frac{1}{2}$ of $\frac{3}{2}$. In the former, the sign+applies only to the next number $i\frac{1}{2}$; but in the latter, $i\frac{1}{2}$ of $\frac{3}{2}$ is a single number.

Thus, the former $= \frac{1}{3} \times \frac{2}{3} \times \frac{3}{4} = \frac{1}{8} = 1\frac{1}{8}$; the latter $= \frac{1}{3} \times \frac{2}{3} \times \frac{4}{3} = \frac{2}{3} + 2\frac{2}{3} + 2\frac{2}{3}$.

Examples LXXII.

- Divide orally:
- (1) L separately by 2, 3, 4, 5, 6. (2) E separately by 4, 5, 7, 10, 12 (3) 34 12, 14, 15, 18, 20. (4) 15 3, 5, 30, 45.
 - 9 Divide
- (1) #9 separately by 8, 16, 24, 36. (2) 11# separately by 25, 75, 87 (3) 21 ... 13, 65, 117 (4) 162 10, 25, 32,
 - 3. Divide orally:-
- (1) I separately by 1, 4, 1, 1,
- (2) # separately by 2, 2, 4, 1, (3) 1 1, 2, 1, 1, 1. (4) 1 2, 3, 4, 6,
- 4. Divide :--
- (1) I separately by 4, 5, 50 14. (2) 17 separately by 5, 5, 18, 15. (3) 38 51, 21, 41, 61,
- - (4) 41 135, 53, 46, 1 (4.

Examples LXXIII. 1 Divide :---

- (t) # by 8 ; # by 4 ; 4 by 4; 12 by 58 ; \$4 by \$1 ; 14 by \$5 ; 143 by \$4. (2) 21 by 38; 104 by 138; 178 by 710; 248 by 54; 28 by 8 of 41.
- (3) 34 by 1 of 2 of 2 : 3.2. of 32 by 47 of 9 : 15-7 of 84 by 4 of 4 of 152. (4) \$ of 11 × 27 of 48 of 22 by 18 of 3 × A of 28 of 8.
- 2. Find the values of :--
- (1) (5 × 8 × 13%) + (1 × 9 + 54). (2) (2 + 9 of +89) + (4 of 2,6 14). (3) 65+(10+3/b)+60. (4) $6\frac{7}{8} + 1\frac{7}{8} + 3\frac{8}{18} + 6\frac{8}{7}$.
- (5) 108 × 39+44-(28+39)+48+74+(39+45).
- (6) $2\frac{1}{2} \times 1\frac{1}{2} + 1\frac{1}{2}$ of $2\frac{9}{2}$. (7) $2\frac{1}{2}$ of $1\frac{1}{2} + 1\frac{1}{2} \times 2\frac{9}{2}$. (8) $2\frac{1}{2}$ of $1\frac{1}{2} + 1\frac{1}{2}$ of $2\frac{9}{2}$.
- (9) $3245 + 324 \times 344 + 324$. (10) $1 + [4 1 + \{2 1 + (1 A)\}]$.
- (II) (3+1+2+2+2-)-(3+1+2+2+2-)

VII. COMPLEX AND CONTINUED FRACTIONS.

277. A fraction having a fraction or mixed number in the numerator or denominator or in both, is a Complex Fraction.

Thus, \$\frac{3}{2}\$, \$\frac{84}{9}\$, \$\frac{7}{9\frac{3}{2}}\$, \$\frac{1}{5\hat{1}}\$, \$\frac{1}{4\hat{1}}\$ are Complex Fractions.

278. A complex fraction is read by inserting the word by for divided by, between the readings of numerator and denominator.

Thus, 31 is read 31 by 42.

979. In the zero of a whole number and a fraction, when the fraction is either complex or simple (Art. 231), the sign is sometimes omitted, as in $5\frac{9}{4}$, which means $3+\frac{9}{4}$; and in a frachez when one of the factors is enclosed in a bracket the sign is often omitted, as in 3/3-31, which means $1 \times (3-3)$.

280. Complex fractions are subject to the same rules as simple fractions, and can always be reduced to simple ones by treating them as the quotient of the numerator by the denominator. (Art. 235).

Thus,
$$\frac{2\frac{1}{3}}{3\frac{3}{6}} = 2\frac{1}{5} + 3\frac{2}{9} = \frac{11}{5} + \frac{29}{9} = \frac{11}{5} \times \frac{9}{20} = \frac{99}{145}$$
.

281. To reduce a complex fraction to a simple fraction

RULE. Express the numerator and denominator of the complex fraction in the form of proper or improper fractions, and multiply the numerator by the denominator inverted; or more simply, sultiply the numerator and denominator of the complex fraction by the L. C. M. of the denominators of the simple fractions.

Ex. 1. Reduce $\frac{5\frac{1}{6}}{3}$ and $\frac{13\frac{1}{6}}{30}$ to simple fractions.

(1)
$$\frac{5\frac{\pi}{4}}{9r_1^2} = 5\frac{7}{9} + 9\frac{5}{11} = \frac{52}{9} + \frac{104}{11} = \frac{52}{9} \times \frac{11}{104} = \frac{52 \times 11}{9 \times 22 \times 52} = \frac{11}{18}$$
. Ans.
Or thus, $\frac{5\pi}{9r_1^2} = \frac{5\pi}{9r_1^2} \times \frac{5\pi}{9r_1^2} \times \frac{5\pi}{9r_1^2} = \frac{495 + 77}{801 + 32} = \frac{572}{936} = \frac{11 \times 52}{18 \times 32} = \frac{11}{18}$. Ans.

(2)
$$\frac{13\frac{1}{9}}{20} = 13\frac{1}{3} + 20 = \frac{40}{3} + 20 = \frac{40}{3} \times \frac{1}{20} = \frac{20 \times 2}{3 \times 20} = \frac{2}{3}$$
. Ans.

Or thus,
$$\frac{13\frac{1}{8}}{20} = \frac{13\frac{1}{8} \times 3}{20 \times 3} = \frac{40}{20 \times 3} = \frac{20 \times 2}{20 \times 3} = \frac{2}{3}$$
. Ans.

Ex. 2. Simplify
$$\frac{12\frac{9}{6} \text{ of } 1\frac{\pi}{19}}{1\frac{1}{6} \text{ of } 3\frac{\pi}{1}}$$
 and $\frac{8\frac{\pi}{6} - 4\frac{9}{3}}{3\frac{\pi}{6} + 7\frac{\pi}{19}}$.

(1)
$$\frac{128}{13}\frac{61}{19}\frac{11}{19}=12\frac{2}{3}\frac{61}{19}+1\frac{8}{19}+1\frac{5}{9}$$
 of $3\frac{3}{7}=\frac{38}{3}$ of $\frac{27}{19}+\frac{14}{9}$ of $\frac{24}{7}$

$$=\frac{19\times2\times3}{3\times19}+\frac{7\times2\times8\times3}{3\times3\times7}=2\times9+\frac{2\times8}{3}$$

$$=\frac{2\times9\times2}{3\times3}=\frac{27}{9}=3\frac{3}{3}$$
 Ans.

(2) $\frac{8\frac{6}{5} - 4\frac{3}{7}}{3\frac{3}{5} + 7\frac{7}{7}} = \frac{(96 + 10) - (48 + 8)}{(36 + 9) - (84 + 5)}, \quad \begin{cases} \text{Multiplying Numr. and Denr.} \\ \text{by 12, the L. c. M. of the Denrs.} \end{cases}$ $= \frac{106 - 56}{45 + 80} = \frac{50}{134} = \frac{2 \times 57}{2 \times 67} = \frac{25}{67}. \quad \text{Ans.}$

Examples LXXIV.

1. Reduce to their simplest forms :-

- (1) $\frac{43}{54}$; $\frac{847}{145}$; $\frac{33}{6}$; $\frac{18}{57}$; $\frac{91}{125}$; $\frac{257}{3445}$; $\frac{47}{447}$; $\frac{7}{447}$; $\frac{21}{37+23}$.
- $(2) \ \ \frac{1\frac{7}{4} \ \text{of} \ \frac{1}{1}}{1\frac{7}{4} \ \text{of} \ \frac{1}{1}}; \ \ \frac{2\frac{1}{5} \ \text{of} \ 8\frac{1}{3}}{2\frac{7}{4} \ \text{of} \ 11\frac{3}{2}}; \ \ \frac{3\frac{1}{2} \ \text{of} \ \frac{74}{4}}{3\frac{1}{4} + \frac{7}{3}}; \ \frac{3\frac{1}{4} 2\frac{3}{4}}{8\frac{3}{5} \ \text{of} \ 17\frac{1}{2}}; \ \frac{5\frac{1}{4} + 3\frac{1}{3}}{7\frac{1}{4} 1\frac{1}{4} \ \text{of} \ 1\frac{3}{2}}.$
- (3) $\frac{7\frac{8}{12}}{9\frac{7}{12}}$ of $\frac{14\frac{1}{12}}{12\frac{3}{12}}$; $\frac{6\frac{1}{9}}{13\frac{1}{12}}$ of $\frac{8\frac{9}{9}}{23\frac{1}{5}}$; $5\frac{1}{7}$ of $\frac{6\frac{9}{9}}{10\frac{3}{9}}$ of $\frac{81}{42}$; $\frac{6}{6}$ of $\frac{13\frac{9}{9}}{4\frac{1}{4}}$.
- (4) $\frac{2\frac{A}{4}}{2^{\frac{3}{2}}} + \frac{2\frac{7}{10}}{8\frac{A}{4}}$; $\frac{7\frac{1}{2} 3\frac{1}{2}}{6 + 4^{\frac{3}{2}}} \div \frac{5\frac{1}{2} + 1\frac{3}{4}}{61 2\frac{1}{4}}$; $\frac{5\frac{1}{2} + 4\frac{3}{2}}{3^{\frac{3}{2}} 2\frac{3}{4}} \times \frac{5\frac{1}{2} 4\frac{3}{4}}{14\frac{3}{2} 8\frac{1}{4}} + \frac{28\frac{1}{2} 22\frac{1}{4}}{14\frac{3}{2} 8\frac{1}{4}}$.
- $(5) \begin{array}{c} 5\frac{2}{3}+7\frac{3}{6} \text{ of } \frac{2\frac{1}{6}\times8\frac{1}{6}}{4\frac{1}{9}+(\frac{1}{6}-\frac{1}{6})} \text{ ; } \frac{5\frac{3}{6}-2\frac{1}{6} \text{ of } \frac{4\frac{1}{9}+5\frac{1}{6}}{4\frac{1}{9}} \text{ ; } \frac{3\frac{7}{17}-2\frac{3}{6}}{3\frac{7}{17}\times2\frac{3}{6}}\times\frac{3\frac{7}{17}+2\frac{3}{6}}{3\frac{7}{17}\text{ of } 2\frac{3}{6}} \\ \end{array}$
- 2. Reduce $\frac{2\frac{1}{3}}{3}$, $8\frac{1}{4}$, $9\frac{4}{3}$, $\frac{1}{1}$ and $16\frac{1}{12}$ to equivalent fractions with the least common denominator. Also reduce $\frac{3}{4}$ to a complex fraction having the denominator ς and $\frac{3}{4}$ to a complex fraction having the numerator 1.0.
 - Compare the quantities 2½, ‡ of 9½ and 7½.
 - 4. Find the values of :-
 - (1) $\frac{2}{3}$ of $37\frac{1}{10} + \frac{13}{2}$ of $17 + \frac{2}{3}$ of $5\frac{3}{7}$ of $\frac{2}{3}$. (2) $\frac{2}{3}$ of $\frac{2}{7} + 9 + \frac{2\frac{4}{7}}{7} + \frac{13}{2\frac{1}{3}}$.
 - (3) $\frac{8}{3}$ of $\frac{3}{4}$ of $\frac{3}{8} + \frac{1}{8}$ of $\frac{8}{8}$ of $1\frac{7}{8} + \frac{18}{19}$ of $\frac{1}{9}$ of $\frac{28\frac{1}{2}}{2}$. (4) $1\frac{1}{8} + \frac{8}{9}$ of $\frac{4}{3} + \frac{4}{5\frac{1}{10}}$.
 - 5. Find the difference between :-
 - $(1) \stackrel{a}{\approx} \text{ of } \frac{4^{\frac{1}{11}}}{5^{\frac{1}{1}}} \text{ and } \stackrel{a}{\approx} \text{ of } 7^{\frac{1}{12}}. \quad (2) \quad \frac{3^{\frac{2}{11}}}{4^{\frac{2}{13}}} \text{ and } \quad \frac{6^{\frac{2}{11}}}{12^{\frac{3}{2}}}. \quad (3) \quad 2^{\frac{2}{11}} \text{ of } \frac{5^{\frac{1}{4}}}{4^{\frac{1}{4}}} \text{ and } \quad \frac{7^{\frac{1}{11}}}{11} \text{ of } 15^{\frac{2}{11}}.$
 - 6. Find the values of ;-
- (1) $2\frac{9}{9}$ of $\frac{6\frac{1}{4}}{1\frac{3}{4}} \times \frac{3\frac{2}{5}}{5\frac{3}{4}}$, (2) $6\frac{9}{9}$ of $9\frac{9}{9} \times 12\frac{9}{11}$ of $\frac{1\frac{1}{2}}{112}$. (3) $\frac{7\frac{3}{4}}{40\frac{5}{5}} \div \frac{17\frac{3}{4}}{73}$
 - (4) $\frac{2}{3\frac{1}{16}}$ of $\frac{6\frac{1}{13}}{8} \times \frac{2}{5}$ of $8\frac{1}{4}$ of $\frac{25}{36}$. (5) $\frac{2\frac{3}{5}}{5\frac{5}{6}}$ of $\frac{1}{5} \times \frac{2}{5}$ of $\frac{48}{7\frac{1}{2}} \times \frac{7\frac{9}{5}}{5\frac{1}{5}}$.
 - (6) 210 of 510 of 1331 + 311 of 44 134 of 2021.
 - $(7) \quad \frac{11\frac{9}{2}}{29} \text{ of } \frac{4\frac{1}{13}}{13} \text{ of } \frac{3\frac{1}{10\frac{9}{8}} \times 5\frac{1}{6} \text{ of } 6 \times 20\frac{9}{4}. \quad \textbf{(8)} \quad 8\frac{1}{8} \text{ of } 7\frac{1}{6} + 2\frac{1}{6} \text{ of } \frac{4\frac{1}{2}}{14\frac{1}{4}} 8\frac{1}{6}.$

$$(g) \ \ \frac{\gamma_1^2 + \gamma_1^1 + \gamma_1^2 - \frac{1}{3}}{\frac{1}{3} + \frac{1}{3} + \frac{1}{3} + \frac{1}{3}} \text{ of } \frac{\frac{4}{1^{\frac{1}{3}}} \text{ of } \frac{3}{1^{\frac{1}{3}}} - \frac{4}{3^{\frac{1}{3}}} \text{ of } \frac{2^{\frac{1}{3}}}{1^{\frac{1}{3}}}}{\frac{3}{3^{\frac{1}{3}}} + \frac{1}{3^{\frac{1}{3}}} \text{ of } \frac{7^{\frac{1}{3}}}{1^{\frac{1}{3}}} \text{ of } \frac{7^{\frac{1}{3}}}{1^{\frac{1}{3}}}$$

282. To find the complete quotient in dividing a number by an integer. RITLE. Divide in the usual way, and to the integral quotient

add the fraction whose numerator is the remainder and denominator the divisor.

Ex. Divide 4148 by 117, and 3136% by 95, giving the complete quotient in each case.

(2) 95)3136
$$_{1_{2}}$$
(33 In dividing by 95, the integral remainder is 1 and the full remainder is $1_{1_{2}}$.

But 1,5+95=+5×13=1. .. the complete quotient = 33-1.

283. Fractions of the nature given below are Continued Fractions, and can be simplified by beginning at the bottom and working upwards.

Ex.
$$\frac{1}{4 - \frac{1}{2 - \frac{1}{1 - \frac{1}{\sqrt{3}}}}} = \frac{1}{4 - \frac{1}{2 - \frac{13}{13 - 5}}} = \frac{1}{4 - \frac{1}{2 - \frac{13}{8}}} + \frac{1}{4 - \frac{3}{16 - 13}}$$
$$= \frac{1}{4 - 4} = \frac{3}{17 - 8} = \frac{3}{8}. \quad Ant.$$

Examples LXXV.

- 1. Find the complete quotient in dividing :-
- (1) 3127 by 43. (2) 6556 by 401. (3) 2221 by 87. (4) 8768 by 45. (5) 845\frac{1}{2} by 12. (6) 6730\frac{1}{2} by 37 and by 73. (7) 4164\frac{2}{2} by 11, and by 132. (8) 56941\frac{1}{2} by 27.
 - 2. Simplify :-

(1)
$$\frac{3}{1+\frac{2}{5+\frac{7}{8}}}$$
, (2) $\frac{1}{13}$ of $\frac{1}{1+\frac{1}{\frac{1}{3}+\frac{1}{3}}}$, (3) $\frac{2}{5+\frac{3}{4+\frac{1}{8}}}$, (4) $2+\frac{1}{3+\frac{4}{5+\frac{1}{8}}}$

$$\begin{array}{c} \text{(5) } 3+\frac{1}{2+\frac{3}{3+\frac{3}{5+\frac{1}{2}}}}, & \text{(6) } 2+\frac{3}{1+\frac{3}{6+\frac{4}{5+\frac{3}{3}}}}, & \text{(7) } 6\frac{1}{6}+\frac{3\frac{3}{2}}{2}, \\ \text{(8) } 2\frac{3}{4}+\frac{4}{5+\frac{4}{5}}, & \text{(9) } \frac{3}{4+\frac{3}{5+\frac{3}{2}}}+\frac{5\frac{1}{3}+\frac{3}{2}}{2+1}, \\ \text{(8) } 2\frac{3}{5+\frac{4}{5+\frac{3}{2}}}, & \text{(9) } \frac{3}{4+\frac{3}{5+\frac{3}{2}}}+\frac{3}{5+\frac{3}{2}}, \\ \text{(8) } 2\frac{3}{5+\frac{4}{5}}, & \text{(9) } \frac{3}{3}+\frac{1}{2}, \\ \text{(9) } \frac{3}{3}+\frac{3}{2}, & \text{(10) } \frac{3}{3}+\frac{3}{2}, \\ \text{(10) } \frac{3}{3}+\frac{3}{2}, \\ \text{(10) } \frac{3}{3}+\frac{3}{2},$$

(10)
$$2\frac{1}{2} \times \frac{1}{3\frac{1}{0} + 4\frac{1}{4}} + \frac{\frac{6 - \frac{1}{2} \times (\frac{5}{6} + \frac{1}{2})}{1 + \frac{1}{2 - \frac{1}{4}}}}{1 + \frac{1}{2 - \frac{1}{4}}}$$
 (11) $1 + \frac{2}{3 + \frac{1}{4 + \frac{1}{2}}} + \frac{18}{23}$

$$(12) \left(3 - \frac{1}{2 - \frac{1}{6 + \frac{1}{5}}}\right) + \left(1 + \frac{1}{4 + \frac{1}{3 - \frac{1}{3 + \frac{1}{5}}}}\right), \qquad (13) \ 3^{\frac{4}{5}} - \frac{5^{\frac{2}{5}}}{7^{\frac{2}{5}} + \frac{1}{50\frac{1}{12} + \frac{15}{9}^{\frac{2}{3}}}}$$

$$(14) \quad \frac{1}{3 + \frac{1}{5 + \frac{1}{7}}} + \frac{3}{8 - \frac{7}{2 - \frac{1}{3}}} + \frac{5}{6 - \frac{5}{2 - \frac{1}{6}}} \cdot (15) \quad \frac{\frac{1}{1 - \frac{1}{2} - \frac{1}{5}} + \frac{1}{5} + (1 + \frac{1}{6})}{3\left(1 + \frac{2}{3\frac{1}{6}}\right) - 4} \cdot \frac{1}{3\left(1 + \frac{1}{3\frac{1}{6}}\right)} = \frac{1}{3\left(1 + \frac{1}{3\frac{1}{6}}\right)$$

(16)
$$1\frac{1}{4} \times 12\frac{1}{3}$$
 of $\frac{1}{4} - \frac{6\frac{1}{4} + 7\frac{1}{4}}{12 - 6\frac{2}{3}} - \frac{4 + \frac{1}{4 + \frac{1}{4} - \frac{1}{4}}}{4}}{4}$

$$\begin{array}{c} (17) \quad \frac{2}{4 + \frac{2}{3 + \frac{1}{4}}} + \frac{12^{2} - 5}{3 - \frac{2}{3 - \frac{1}{4}}} + \frac{4}{4 + \frac{2}{4 + \frac{1}{4}}} + \frac{5}{3 + \frac{1}{2 + \frac{1}{3}}} \cdot (18) \quad \frac{4\frac{2}{3}}{4\frac{2}{3} + \frac{4}{3}} + \frac{4\frac{1}{3}}{4\frac{2}{3} + \frac{1}{3}} \cdot \frac{1}{3} \cdot \frac{1}{3}$$

$$(19) \ \frac{2}{2+\frac{2}{2+\frac{1}{2+\frac{1}{5+\frac{1}{4}}}}} + \frac{2}{5+\frac{1}{2+\frac{1}{3+\frac{1}{2}}}} + \frac{1\frac{1}{3} \times \frac{2\frac{1}{3}}{3\frac{1}{6}} \left(3-\frac{1}{4}\right) + 1\frac{1}{2}}{2+\frac{1}{3+\frac{1}{4}}} = \frac{1}{3+\frac{1}{4+\frac{1}{5+\frac{1}{2}}}}$$

Simplify :- (1) 15½+18+(78-68).

(2) $(15\frac{1}{4} + 1\frac{5}{5}) + \frac{7}{15}(7\frac{7}{2} - 6\frac{7}{3})$.

(3) $16 - \{2\frac{1}{4} - (4\frac{1}{4} + 1\frac{1}{4})\}.$

(4) $16 + \{2\frac{1}{4} - (4\frac{1}{4} - 1\frac{1}{4})\}.$

(5) $5\frac{1}{4} - \{5\frac{3}{4} - \frac{3}{6}(3\frac{3}{4} + 2\frac{1}{6})\}$. (6) $3\frac{2}{6} \times \frac{1}{4} + 3\frac{1}{6}$ of $3\frac{5}{6}$ of $3\frac{5}{6}$ of $1\frac{1}{6}$.

(7) $(\frac{1}{3} + \frac{1}{3})$ of $(1\frac{1}{3} + 2\frac{3}{3})$ of $(2\frac{1}{3} - 1\frac{1}{3})$ of $(3\frac{1}{13} - \frac{3}{3})$. (8) $(3\frac{1}{3} + 4\frac{3}{3})$ of $(10\frac{1}{3} + 7\frac{1}{3})$ of $\frac{1}{3\frac{1}{3}}$. (9) $3\frac{1}{3\frac{1}{3}} + \frac{1}{3\frac{3}{3}} +$

(3) (3√1 + 4\$) of (10\$, + 7\$) of \$\frac{1}{24}\$.
 (9) 3√1 ÷ (4\$, + 10\$) + (7\$, + \$\frac{1}{24}\$.).
 (10) 1\$, of 5\$, + (4\$, - \$\frac{1}{2}\$,) + 1\$, \(\frac{1}{2}\$, -6\$, +\$\frac{1}{2}\$, of 2\$,
 4. Show that the simple fraction equivalent to the value of \$\frac{1}{2}\$.

so the value of $\frac{1}{4}$ of $\frac{3}{16} + \frac{1}{4}$ of $\frac{1}{4}$ is of the same magnitude as that expressed by $\frac{1}{16} + \frac{1}{4}$ of $\frac{1}{4}$ of $\frac{1}{4}$.

5. Prove that $\frac{1}{2}$ of $(1 - \frac{\pi}{2}) + \frac{\pi}{6}$ of $\frac{1}{10} + \frac{\pi}{6}$ of $(\frac{1}{6} + \frac{1}{14}) + \frac{\pi}{60}$ of $(\frac{\pi}{2} + \frac{\pi}{2}) = 1$

VIII. SIMPLIFICATION OF FRACTIONS.

284. What has been proved in the adaptation of the fundamental operations to fractions, will furnish the means of simplifying arithmetical expressions formed by their combinations; and, in action of the combinations; and, in a case of the combination of the combinations are combined to the fractions concerned, and their resolutions into the factors of which they are made up.

Ex. 1. Simplify
$$\frac{\frac{1}{4} + \frac{1}{4} + \frac{1}{4}}{\frac{1}{24} + \frac{1}{3\frac{1}{2}} + \frac{1}{4\frac{1}{2}}} - \frac{13}{24}$$
 of $\frac{576}{264}$.

The expression = $\frac{1}{2} + \frac{1}{2} + \frac{1}{6} = \frac{13}{24}$ or $\frac{24 \times 24}{264} = \frac{6 + 4 + 3}{12} = \frac{13 \times 24}{126 + 99 + 79} = \frac{13 \times 24}{264}$ = $\frac{16}{2} = \frac{13 \times 24}{126 + 99 + 79} = \frac{13 \times 24}{315} = \frac{13}{315}$

$$\begin{array}{l} = \frac{16}{33\%} - \frac{13\times24}{11\times24} - \frac{13}{12}\times\frac{315}{286} - \frac{13}{11} \\ = \frac{13}{4\times3} \times \frac{153\times22}{13\times22} - \frac{13}{11} - \frac{105}{88} - \frac{13}{11} - \frac{105-104}{88} - \frac{1}{83}. \quad \mathcal{A}ne. \end{array}$$

Ex. s. Simplify $\left\{2\frac{3}{4} + \frac{5}{2} \text{ of } \frac{7}{3\frac{1}{6}} - \frac{1\frac{5}{6}}{2\frac{1}{6}}\right\} + 1\frac{5}{6}\frac{5}{6}$. The expression= $\left\{\frac{11}{6} + \frac{5}{6} \text{ of } \frac{7 \times 5}{6} - \frac{\frac{5}{6}}{6}\right\} + \frac{305}{606}$

$$= \left\{ \frac{11}{4} + \frac{5 \times 7 \times 5}{2 \times 19} - \frac{5}{3} \times \frac{2}{5} \right\} \times \frac{228}{305}$$

$$= \begin{cases} \frac{11}{4} + \frac{175}{38} - \frac{2}{3} \end{bmatrix} \times \frac{228}{305} = \frac{627 + 1050 - 152}{228} \times \frac{228}{305}$$

$$= \frac{1677 - 152}{228} \times \frac{228}{305} = \frac{1525}{305} = 5 \quad Ans.$$

Examples LXXVI.

Simplify the following:—

1. $\frac{1}{4}$ of $\frac{1}{2} - \frac{1}{4}$ of $3\frac{1}{4} + \frac{1}{4}$ of $3\frac{1}{4}$. 2. $(\frac{1}{6} + \frac{1}{4}$ of $(\frac{1}{4}, \frac{1}{4} + \frac{1}{4})$.

3.
$$\frac{4_0^2 \times 4_0^2 \times 4_0^2 - 1}{4_0^2 \times 4_0^2 - 1}$$
 4. $\frac{4_0^2 \times 4_0^2 - 3_0^2 \times 3_0^2}{4_0^2 - 3_0^2}$

5.
$$\frac{1+6\frac{2}{1}\times(1+6\frac{2}{1})}{1+5\frac{2}{1}\times(1+5\frac{2}{1})}$$
 6. $\frac{7\frac{1}{2}}{6\frac{1}{2}}+\frac{11\frac{1}{2}+2\frac{2}{2}}{11\frac{1}{2}+2\frac{2}{2}}\times 10\frac{6}{16}-6\frac{4}{16}\frac{2}{1}$

7.
$$\frac{14\frac{1}{4} - 6\frac{1}{6}}{24 + 66\frac{1}{6}} + \frac{4\frac{7}{14} + 6\frac{1}{6}}{6\frac{1}{6} - 3\frac{1}{6}} + (30\frac{7}{14} - 22\frac{6}{14})$$
. 8. $\frac{1 + 2 \times \frac{6}{14} + \frac{4}{5} \times \frac{6}{14}}{1 - \frac{4}{5} \times \frac{4}{14}}$.

9.
$$\frac{1}{18} - \frac{24}{9} + \frac{32}{4} + \frac{4}{44}$$
. 10. $(\frac{1}{2} - \frac{34}{4}) + (\frac{1}{8} + \frac{78}{8}) - (\frac{1}{14} - \frac{78}{9})$

11.
$$\frac{3\frac{1}{2} - \frac{1}{2\frac{1}{7}}}{4\frac{1}{2}\sigma^{2}} \text{ of } \frac{11\frac{1}{2}}{17} \times 52\frac{1}{17}.$$
12.
$$\frac{3 + \frac{5}{3} \text{ of } \frac{21}{7\frac{1}{3}} - \frac{1}{4} - \frac{12\frac{1}{3}}{2\frac{1}{3}}}{10 - \frac{151}{320} \text{ of } 5}.$$

15.
$$\frac{2\frac{1}{2} - \frac{5}{4}}{2\frac{1}{2} + \frac{5}{4}} + \frac{7}{12} \text{ of } \frac{9 \times 10}{14 \times 3} - \frac{22\frac{1}{6}}{30}$$
. 16. $\frac{1\frac{1}{2}}{2\frac{1}{4}} - \frac{5\frac{5}{4}}{6\frac{1}{4}} \text{ of } \left(\frac{1}{5} - \frac{\frac{1}{6} - \frac{1}{4}}{4^{\frac{3}{2}} - 3^{\frac{3}{2}}}\right)$.

17.
$$\frac{1}{26}\left(5\frac{1}{2}-2\frac{1}{4}\right)+\left(5\frac{1}{3}\text{ of }\frac{9}{128}+\frac{9}{8}\text{ of }\frac{3}{8}\right)-\left(\frac{1}{14}-\frac{1\frac{1}{3}}{3}\right)+\frac{8}{7}\left(2-\frac{4}{9}\right)$$

18.
$$\frac{3}{1} - \frac{9}{10}$$
 of $2\frac{11}{26} + \frac{4}{13 - 3\frac{9}{10}} + 3\frac{11}{16} - \frac{3}{3 - 1+\frac{1}{9}}$

$$19. \quad \frac{-\frac{1+2\frac{1}{2}+3\frac{1}{2}}{\frac{1}{2}+\frac{2}{2\frac{1}{3}}+3\frac{1}{2}}{\frac{1}{2}} \times \frac{55\frac{1}{2}+11}{\frac{1}{2}-0f} \cdot 13\frac{2}{3}, \qquad \qquad 20. \quad \frac{1-\frac{4}{3}}{3\frac{1}{4}+1\frac{1}{2}+\frac{1}{6}\frac{1}{3}} \times \left(\frac{1+\frac{1}{2}}{1-\frac{1}{2}}\right)^2.$$

21.
$$\frac{\frac{1}{3} + \frac{1}{3} + \frac{1}{4}}{\frac{1}{2} + \frac{1}{3} + \frac{1}{4}} \text{ of } \frac{1}{13} \text{ of } \frac{1}{1 + \frac{1}{3 + \frac{1}{4}}}.$$

22.
$$\left\{\frac{11\frac{9}{4} - 10\frac{1}{2}}{11\frac{3}{4} + 10\frac{1}{2}} + \frac{10\frac{9}{8} + 11\frac{1}{4}}{10\frac{9}{8} - 9\frac{1}{8}}\right\} \times \frac{\frac{9}{8} + \frac{3}{11}}{\frac{9}{8} - \frac{3}{11}} \times \frac{8\frac{1}{11}}{2\frac{3}{11}}.$$

23.
$$\frac{2\frac{1}{4}}{2^2} + \frac{2\frac{1}{2} + 5\frac{1}{8}}{2\frac{1}{4} + 0\frac{1}{1}} + \frac{5}{0}$$
 of $\frac{9}{10} + \frac{3}{8}$ of $\frac{3}{20}$.

24.
$$\left(6\frac{3}{7}\text{ of }\frac{5\frac{1}{6}-4\sqrt{3}}{126-7\sqrt{3}}\right) + \frac{1+\frac{1}{2\frac{1}{3}}}{2}$$
. 25. $\frac{4\frac{1}{6}}{\sqrt{2}}$ of $\frac{3}{7}$ - $\left(\frac{2}{7}\text{ of }\frac{2\frac{3}{6}+1\frac{1}{6}}{2-\sqrt{3}}\right)$.

26.
$$\frac{1}{3} \times \frac{17}{3}$$
 of $\frac{27}{85} + \left(2\frac{1}{3} + \frac{1}{3+\frac{1}{3}}\right) \times \frac{39}{103}$.

27.
$$I = \frac{I - \frac{7}{43}}{2 - \lambda} + \frac{I \frac{3}{5}}{3 \frac{1}{3}} - \frac{5 \frac{1}{3}}{6 \frac{1}{4}} \text{ of } \frac{2}{3} \left\{ \frac{1}{5} - \frac{\frac{1}{3} - \frac{1}{3}}{4 \frac{3}{3} - \frac{3}{3}} \right\}$$

IX. G. C. M. AND L. C. M. OF FRACTIONS.

285. The definitions that we have already given of the G. C. M. and L. C. M. of two or more whole numbers will also be applicable when the given numbers are fractions, provided that we understand by exactly, that the complete quotients must be integers.

286. To find the G. C. M. of two or more fractions.

RULE. Express the fractions in their lowest terms, if they be not already so. Then take the G. C. M. of the numerators for numerator and the L. C. M. of the denominators for denominator. The fraction so formed is the ii. C. M. of the given fractions.

Ex. Find the G. C. M. of 5, 17, 12.

Here, the fractions reduced to their lowest terms are 2, 3, 11-

The G. C. M. of the numerators 8, 6, 16 is 2; and the L. C. M. of the denominators 9, 7, 21 is 63

Thus, the required 6. C. M. = $\frac{3}{62}$. Ans.

287. To find the 1. C. M. of two or more fractions.

RULE. Express the fractions in their lowest terms. Then take the L. C. M. of the numerators as numerator and the G. C. M. of the denominators as denominator. The fraction so formed is the L. C. M. of the given fractions.

Ex. Find the L. C. M. of \$3, \$4, \$6.

Here, the fractions reduced to their lowest terms are 35, 3, 36. The L. C. M. of the numerators 8, 2, 9 is 72; and the G. C. M.

of the denominators 25, 7, 20 is 1, Thus, the required L. C. M. = $\frac{7}{1}$ = 72. Ans.

Note. Before applying the Rules given above, reduce mixed numbers to improper tractions and compound fractions to simple ones

Examples LXXVII.

Find the G. C. M. and the L. C. M. of :-

(1) 品品 (2) 11, 14. (3) $\frac{1}{9}$, $\frac{1}{12}$, $\frac{1}{16}$. (4) $\frac{7}{9}$, $\frac{6}{7}$, $\frac{1}{9}$. (7) $\frac{1}{12}$, $\frac{2}{9}$, $\frac{2}{17}$, $\frac{3}{17}$. (8) $\frac{1}{19}$, $\frac{2}{19}$, $\frac{1}{19}$, $\frac{1}{19}$.

(5) 3, 1, 7, 3. (6) 7, 1, 5, 5, 9.

(9) 114, 517, 14, 6, 6, 8. (10: 133, 27, 381, 818.

(11) 74, 132, 13, 43, 2. (12) 37, 13, 13, 28, 318, 2. What is the greatest length that is contained a whole number of times exactly in 261 ft., 281 ft. and 291 ft.?

3. A man gives away to each of five people Ti, Ti, 10, 15, 10, of a basket of apples; how many has he left, supposing he has only just enough apples to do the above operation without dividing an apple?

4. What is the least number which, when divided by each of the fractions 3, To 16, and 15, gives a whole number as quotient in each case?

5. Three lines of paling run side by side for a distance of 150 yds. The upright posts are respectively 21, 31, 42 ft. apart. How often will a person walking outside be able, on looking across, to see 3 posts in a line?

6. Eight bells commence to toll simultaneously. They toll at intervals of 1\frac{1}{2}, 2\frac{1}{2}, 3.4\frac{1}{2}, 5, 6, 8 and 9 seconds respectively; after

what interval will they again toll together?

7. Three wheels are respectively 10½ ft., 6½ ft. and 4 for ft. round.

Three wheels are respectively log it, og it and 4 for it round.
 Find the least distance travelled when they will make complete revolutions.

8. A man gives away to each of four people $\frac{1}{3}$, $\frac{1}{3}$ in $\frac{1}{3}$ and $\frac{1}{3}$ of a basket of apples, and has only just enough apples to be able to do this without dividing an apple; how many apples had be?

X. MISCELLANEOUS EXAMPLES IN FRACTIONS.

288. The following Solutions, we hope, will be of service to students in acquiring a thorough knowledge of the principles of Vulgar Fractions.

Examples worked out-

Ex. 1. What fraction added to the sum of $\frac{3}{7}$, $\frac{3}{8}$, $\frac{4}{9}$ and $2\frac{1}{2}$ will make the sum equal to 5?

Here, $\frac{2}{3} + \frac{2}{3} + \frac{4}{3} + 2\frac{1}{3} = 2 + 2\frac{1}{14} = 4\frac{1}{14}$ the required fraction = $5 - 4\frac{1}{3} = \frac{3}{3}$. Ans.

Ex. 3. What fraction is that from which if there be taken $\frac{1}{2}$ of $\frac{3}{2}$ and to the remainder be added $\frac{3}{4}$ of $\frac{7}{26}$, the sum will be 10?

If and to the remainder be added r_5^* of r_6^* , the sum will be Here, r_6^* of $r_6^* = r_6^*$ and r_6^* of $r_6^* = r_6^*$.

... the required number = 10 $-\frac{1}{6} + \frac{1}{36} = 9\frac{5}{6} + \frac{1}{36} = 9\frac{15}{6}$. Ans. Ex. 3. Find what fraction multiplied by the sum of $2\frac{5}{6}$, $1\frac{1}{10}$ and $\frac{1}{10}$ will make the product equal to 17.

Here, 21+ 110+4=3+88=388.

... the required fraction = 17 + $3\frac{30}{38}$ = 17 × $\frac{30}{110}$ = $\frac{30}{7}$ = 4%. Ans.

Ex. 4. Find what least fraction added to the sum of $\frac{3}{4}$, $1\frac{7}{8}$ and $2\frac{7}{8}$ will make the result an integer,

Here, $\frac{3}{4} + 1\frac{7}{4} + 2\frac{5}{6} - 3 + 2\frac{1}{2}\frac{7}{4} = 5\frac{1}{2}\frac{7}{4}$.

, the required fraction = $1 - \frac{1}{2} \frac{1}{4} = \frac{1}{2} \frac{3}{4}$. Ans. E.e. 5. What number divided by $2 \frac{1}{2} \frac{1}{4}$ will produce $\frac{1}{2} \frac{1}{4} \frac{1}{4} \frac{3}{4} \frac{3}{4} \frac{1}{4} \frac{3}{4} \frac{3$

The required number $= \frac{4}{15} \times 2\frac{1}{16} = \frac{4}{15} \times \frac{15}{16} = \frac{11}{26}$. Ans.

Ex. 6. A man has \(\frac{3}{8} \) of an estate, he gives his son \(\frac{1}{2} \) of his share; what portion of the estate has he then left?

 $\frac{1}{4}$ of his share being given away, there remains $(1-\frac{1}{4})$ or $\frac{3}{4}$.

But his share = \$ of the estate; ... he retains \$ of \$=34. Ans.

Examples LXXVIII.

1. What number added to $\frac{14}{27}$ makes $1\frac{12}{2}$? and what taken from $1\frac{12}{3}$? leaves $\frac{11}{12}$?

2. What number added to $\frac{16}{11}$, $\frac{11}{4}$, $\frac{2}{3}$, $\frac{41}{42}$, will make the sum total equal to 3?

Multiply the sum of 3½, 4¾ and 4½ by the difference of 7½ and 5½; and divide the product by the sum of 94½ and 93½.

 Prove that the sum of 5½ and 3½ is equal to four times their difference.

5. Compare the product and quotient of & by 14.

6. Find what quantity multiplied by $\frac{a}{3}$ of $\frac{a}{3}$ of $3\frac{1}{2}$, gives a result equal to $\frac{a}{3}$ of $6\frac{1}{3}$, of $6\frac{1}{3}$.

What number is that, whereof the part expressed by ½ + ½ + ½ is 45? What number must be added to ½ of 2½ to give 3½?

8. Find the least fraction which, added to the sum of $\frac{2}{3}$, $\frac{2}{10}$ and $\frac{2}{3}$ will make the result an integer.

9. To 479 add 1984 and repeat the addition 6 times.

10. From 11 $\frac{\pi}{10}$ take the sum of $2\frac{\pi}{2}$, $3\frac{\pi}{2}$ and $4\frac{\pi}{3}$, and multiply the difference by $2\frac{\pi}{3}$ of $\frac{\pi}{62}$ of $6\frac{\pi}{2}$.

11. Multiply $49\frac{16}{16}$ by $50\frac{1}{16}$ and add $\frac{1}{256}$ to the result.

How many times does \$\frac{3}{3} + \frac{3}{15} = \frac{1}{15} \text{ contain \$\frac{2}{7} + \frac{1}{3} = \frac{1}{21}\$?

13. Multiply the sum of 1, \(\frac{1}{2}\), \(\frac{3}{2}\) and \(\frac{3}{4}\) by the difference of \(\frac{1}{1}\), and \(\frac{3}{20}\) and divide the product by the double of 21\(\frac{2}{3}\).

14. Of the fractions \(\frac{1}{2}\), \(\frac{1}{2}\), \(\frac{1}{2}\), \(\frac{1}{2}\), \(\frac{1}{2}\), find how much the sum of the greatest and least exceeds the difference of the other two.

15. From I take its half, third, and twenty-fourth parts: add the product of those parts to the remainder; and multiply this sum by 7¹/₁. What must ³/₂ be divided by to produce 2?

16. To ⁴/₃ of a dozen add ¹⁴/₄ of three hundred, and divide this sum by the difference of 3³/₄ of a hundred and 43³/₂.

17. Find the sum of the greatest and least of the fractions $\frac{3}{8}$, $\frac{7}{18}$, $\frac{4}{8}$ and $\frac{7}{8}$ and $\frac{7}{18}$, the sum of the other two, and the difference of these sums.

18. Multiply the sum of $\frac{1}{4}$, I_{7}^{2} and $\frac{4}{6}$ by the difference of $\frac{4}{15}$ and $\frac{4}{6}$, and divide the product by $\frac{1}{16}$ of I_{14}^{2} .

19. What fraction is that from which if § of 3-1½/2 be subtracted and the remainder be divided by 5½ + 16½, the result will be ½?

Divide the sum of 2²/₃, 3⁴/₄ and 5²/₅ by the sum of 4⁴/₃ and 8³/₅, and to the quotient add the difference of 10²/₃ and 5²/₅.

21. To the sum of 3\frac{3}{4} and 4\frac{4}{5} add the difference between 4\frac{4}{3} and 5\frac{2}{6} and multiply the result by 11\frac{7}{17}.

22. A merchant owned $\frac{\pi}{4\pi}$ of a ship and sold $\frac{\pi}{4}$ of his share, what share has he remaining?

23. If I pay away ½ of my money, then ⅓ of what remains, then ⅓ of what then remains and then ⅙ of what still remains, what fraction of the whole will be left?

24. What is the least fraction which must be added to the sum of 4 and ‡ divided by their difference to make the result an integer?

25. The difference of two numbers is $15a_5^4$: the smaller number is $5\frac{1}{2}\frac{\pi}{3}$; find the greater number.

26. Multiply $3\frac{1}{4^{10}}$ by $15\frac{2}{3}$, and divide $\frac{2}{3\frac{3}{4}}$ by $\frac{2^{\frac{3}{4}}}{3}$; and add together the sum and difference of these results.

27. Divide 2 by the sum of 2\(\frac{2}{3}\), \(\frac{4}{3}\) and 4; add 1\(\frac{2}{3}\)-\(\frac{7}{4}\) to the quotient; and multiply the result by the difference of 5\(\frac{1}{3}\) and 4\(\frac{1}{2}\).

28. If I pay away 1 of my money, then § of the remainder, then 1 of what then remains and then 1 of the original sum; what fractional part of my money have I left after the second, and also after the final payment?

29. What must be taken from

84 of
$$\frac{5\frac{5}{6}-2\frac{1}{8}}{3\frac{3}{4}+\frac{1}{2}s} + \frac{5\frac{5}{8}+\frac{3}{2}}{1+\frac{1}{2} \text{ of } \frac{5}{6}}$$
 of $\frac{\frac{3}{2}}{1-\frac{3}{4}}$ to reduce its value to $\frac{1}{2}$?

30. A has a certain sum of money in his pocket of which he loses §ths; he gives hith of what remains to B, and then §th of (½-½) of what then remains to C; find what fractional part of A's original money B and C respectively receive; and cempare these sums with the amount A has after his loss.

31. A man having
$$\frac{17\frac{6}{4} - \left(\frac{3\frac{3}{4}}{4\frac{6}{8}} + \frac{1}{8 - 5\frac{2}{8}}\right)}{7\frac{1}{2} \text{ of } \frac{5}{7} + \frac{2}{6}} + \frac{6\frac{6}{3} \text{ of } 7}{5\frac{5}{8}} \text{ of an estate,}$$

gives \(\frac{1}{2} \) of his share to his son, and \(\frac{1}{2} \) of the remainder to his daughter; what fraction of the estate has he still remaining?

33. If I cut half a cake into 5 equal parts, and the remainder into 7 equal parts, and then cut one of the 5 equal parts into 6 equal parts, and one of the 7 equal parts into 4 equal parts and then give 2 children each one of each of these small slices, what fractional part of the whole cake will they receive, and what part of the cake will be left?

XI. APPLICATION OF FRACTIONS TO COMPOUND QUANTITIES.

289. In the Fundamental Operations of Compound Quantities, if the lowest denominations of the given compound quantities be mixed numbers, we shall treat separately, first the fractional parts by the ordinary method for Fractions and then the integral parts.

Ex. 1. Add together £16. 2s. $1\frac{1}{6}d$, £4. 18s. $1\frac{1}{6}d$, and £1. 0s. $9\frac{1}{16}d$.

£. s. d.
16. 2. $1\frac{1}{4}$ Now $(\frac{1}{6} + \frac{1}{2} + \frac{1}{16})d$. $\frac{20 + 36 + 12}{3}d = \frac{45}{4}d = 1\frac{23}{4}d$. we

therefore put down \(\frac{13}{2}d\), carry on 1d. to the column of pence, and proceed in the usual way.

I 013

Ex. 2. Subtract Rs 32, 14a. $9[\frac{1}{4}p$, from Rs.87, 8a. $6\frac{n}{4}p$. Rs. a. p. Here $\frac{1}{4}$ is greater than $\frac{n}{4}$, therefore we add 1.

87 8 6 $\frac{3}{2}$ to $\frac{2}{5}$, which makes it $\frac{1}{4}$. 32 $\frac{14}{9}$ $\frac{9}{12}$ Now $\frac{1}{6}$ $-\frac{1}{2}$ $=\frac{33-22}{24}$ $=\frac{1}{2}$. We must add 1/6.

to 96., and proceed in the usual way.

Ex. 3. Multiply £6. 12s. 8\(\frac{1}{2}\)d. by 57, and divide Rs.21, 14a.
5\(\frac{1}{2}\)d. by 21.

(1) £. s d. 6 12 8 $^{\circ}$ 57=11×5+2. 11 73 0 1 $^{\circ}$, for $^{\circ}$ dd. × 11= $^{\circ}$ d. (2) Rs. a. p. (3) 21 14 51 21=3×7. 17 7 4 9 $^{\circ}$ for 2° + 3= $^{\circ}$. 1 0 8 $^{\circ}$ for 1° + 7= $^{\circ}$.

73 0 18, 107 36. x 11 = 2.6. 1 0 8\$ for 12 = -9.6. 1 0 5 5 for 12 = -9.6. 1 0 5 for 12

Examples LXXIX.

1. Add together :s. d. (4) £. (1) Rs. a, p. (2) Rs. a. p. (3) €. 15 73 13 53 7 13 13 5 14 21 32 - 6 2 14 6 10 12 10 211 1 11}} a 6≗ 5 10 (5) oz. dwts. grs. (7) poles yds. ft. in. (6) cwt. grs. Hs. oz.

16 153 25 2 13 0 21 132 14 18 Q₁T_D 25 c 4 31 13 1114 19 2 13 ń 2 10 124 18 0 20 0.011

- 2. Perform the following subtractions : -(1) Rs. a. h. (2) Rs. a. (3) £.. s. d. (4) f. 15 0 35 17 15 7¥ 13 6₹ 162
- (5) cwt. ars. ths. (6) cwt. ars. lbs. (7) fur. po. vds. in. (8) hrs. min. sec. 1 71% 45 35 1 162 23 5 15 0 0 23 25 4 14 0.245 15 50 4811

Multiply :--

- (1) hs.9. 4a. 2.h. separately by 8, 11, 45 and 139.
- (2) £75, 13s, 91d, separately by 4, 15, 88 and 96.
- (3) 14 cwt. 3 ars. 25 lbs. 13% oz. separately by 12, 24 and 96.
- (4) 45 mds, 14 sr. 7 dech, separately by 9, 24 and 35.
- (5) 3 for, 34 pg. 4 vds. 1 ft. 843 in, separately by 45 and 90

4. Divide :-

- (1) Rs.246, 12a, 84d, separately by 12, 14, 26 and 58, (2) £007, 18t, 108 dd, separately by 26, 53, 84 and 145.
- (2) 780 lbs. 12 oz. 1484 drs. separately by 7, 15 and 67.
- (4) 1004 mds, 20ff sr. separately by 729 and 1521. (5) Rs.7, 8a, 118b, separately by Rs.2, 2a, 78b., and 15a, 98b.
- (6) £282, 18s. 744d. separately by £6, 18s. 04d., and £27. 15s. 94d.

XII. REDUCTION OF FRACTIONS.

290. Our attention has hitherto been confined to fractions considered generally, without regard to the particular value of their units : and it remains to apply what has been said to such concrete quantities as constitute the principal subjects of practical computation.

291. We shall notice here, that while times denotes the multiplication of a quantity by an integer, of denotes its multiplication by a fraction, and either times or of its multiplication by a mixed number.

Thus, each of the expressions 5 times Rs.7, \$ of Rs.7, and either 3t times Rs.7 or 3t of Rs.7 denotes the multiplication of Rs.7 by 5, by and by 3 respectively. Also the notation for 5 times Rs.7 is either 5 x Rs. 7 or Rs. (5 x 7).

292. Reduction of Fractions can conveniently be divided into the two following cases :---

(1) To reduce a fraction of one denomination to a lower denomination; and conversely,

(2) To reduce a quantity of one denomination to a fraction of a higher denomination.

293. Case I. To reduce a fraction of one denomination to a lower denomination. (Descending Reduction)

RULE. Multiply the fraction of the given denomination by the number which connects the lower denomination with one (or unit) of the given denomination.

Ex. Reduce L3 to pence, and J of a day to seconds.

(1) $\mathcal{L}_{1}^{2} = \frac{2}{7} \times (20 \times 12) d = \frac{2 \times 20 \times 12}{7} d = \frac{480}{7} d = 68 \frac{4}{7} d$. = 68 \frac{4}{7} d. = 68 \frac{4}{7} d.

(2) $\frac{1}{27}$ of a day = $\frac{1}{27} \times (24 \times 60 \times 60)$ sec. = $\frac{8 \times 24 \times 60 \times 60}{27}$ sec. = 25600 sec. Ans.

294. Case II. To reduce a quantity of one denomination to a fraction of a higher denomination. (Ascending Reduction).

RULE. Divide the number of the given denomination by the number which connects that denomination with one (or unit) of the higher denomination.

Ex. Reduce \$\frac{1}{4}d\$ to the fraction of a pound, and 18\frac{3}{4} grs. to the fraction of an oz. Troy.

(1)
$$5\frac{1}{4}d = \mathcal{L} \frac{5\frac{1}{4}}{12\times 20} = \mathcal{L} \frac{21}{4} \times \frac{1}{12\times 20} = \mathcal{L} \frac{7}{320}$$
. Ans.

(2)
$$18\frac{8}{4}$$
 grs. = $\frac{18\frac{8}{4}}{24 \times 20}$ oz. = $\frac{75}{4} \times \frac{1}{24 \times 20}$ oz. = $\frac{5}{128}$ oz. Ans.

295. Sometimes we employ both the descending and the assending process in reducing a fraction of one denomination to a fraction of another denomination.

E.r. Reduce 3 of a guinea to the fraction of £1.

$$\frac{3}{5}$$
 of a guinea = $\frac{3 \times 21}{5} s_1 = \frac{63}{5} s_2 = £ \frac{63}{5 \times 20} = £ \frac{63}{100}$

Examples LXXX.

- 1. Reduce $\frac{1}{5}$, $\frac{1}{5}$, $\frac{2}{5}$, $\frac{2}{15}$ and $\frac{1}{5}$ of a rupee to annas; and $\frac{1}{5}$ of Re.1 to gandas.
 - 2. Reduce 1, 4, 22, and 245 of a pound to pence.
- 3. Express $\frac{2}{3}$ of a shilling, $\frac{4}{7}$ of a penny, and $\frac{140}{11}$ of a farthing as fractions of a pound.
- 4. Reduce \S of a guinea, \S of a half-guinea, and $6\S$ of a crown to fractions of $\pounds\iota$.
- Reduce 3 of a cwt. to the fraction of 1 lb.; 4 of an ounce to that of 1 cvt.; and 19 of an ounce (Avoir.) to that of 1 grain.

Express \$\frac{1}{4}\frac{7}{2}\$ of a yard as the fraction of an inch, and \$\frac{148}{48}\$ of an inch as that of a pole.

Find the fraction of a yard which expresses \(\frac{3}{4}\) of an ell of 5 quarters; and that of a day which is equal to \(\tau_0^2\) of a year of 365 days.
 Reduce \(\text{gr}_0^2\) of a maund to the fraction of a seer; \(\text{gr}_0^2\) h. to

the fraction of 1 lb. Troy, and \$\frac{1}{2}\$ of a maund to chhataks.

 Reduce \(\frac{1}{2}\frac{1}{2}\) of a barrel of beer to the fraction of a quart; and \(\frac{1}{1}\) of a pint of wine to the fraction of a hogshead.

10. Reduce 1487 of a mile to poles; 387 of an acre to sq. yards.

 Express 4 of a guinea, 6 of a shilling and 16 of a farthing as fractions of £10.

12. Reduce 4921 hours to the fraction of a year of 3651 days.

13. Express \(\frac{1}{3} \) of 2151\(\frac{1}{3} \) sq. yards in acres; \(3\) \(\frac{1487}{3686} \) miles in yards; and \(\frac{1}{3} \) cubit as the fraction of an anguli.

14. What fraction expresses $\frac{51_3}{71_4^3}$ of 5940 seconds in weeks?

296. The preceding two cases in Art. 292 enable us

 To find the value of a given fraction of any concrete quantity in terms of its own or lower denominations; and

(2) To reduce a compound quantity to a fraction of a higher denomination.

297 Case I. To find the value of a given fraction of any concrete quantity in terms of its own or lower denominations.

 When the quantity is simple or can be easily reduced to a simple quantity.

RULE. Multiply the given quantity by the numerator of the fraction, divide the product (if possible) by the denominator; the quotient (if any) is the required number of parts of that denomination. If there be a remaindare, multiply the numerator of the fraction which remains by the number of units of the next inferior denomination which are equivalent in value to the given denomination much of the parts of that denomination. Proceed in the same way with the remainder (if any), and the parts of the next denomination will be found; repeat this process till the lowest denomination, which the given quantity is capable of being reduced, is obtained.

Ex. 1. Find the value of a of f.1.

$$\frac{8}{8}$$
 of £1 = $\frac{3 \times 20}{8}$ s. = $\frac{3 \times 5}{2}$ s. = $\frac{15}{2}$ s. = $7\frac{1}{2}$ s.; $\frac{1}{2}$ s. = $\frac{1 \times 12}{2}$ d. = 6d.

.. the required value=7s. 6d.

Ex. 2. Find the value of § of Rs.4.

$$\frac{5}{3}$$
 of $Rs.4 = Rs.\frac{5 \times 4}{6} = Rs.\frac{10}{3} = Rs.\frac{10}{3}$; $Re\frac{1}{3} = \frac{1 \times 16}{3} a. = \frac{16}{3} a. = \frac{5}{3} a.$;

$$\frac{1}{3}a = \frac{1 \times 12}{3}p = 4p$$
. \therefore the required value = Rs.3. 5a. 4p.

Ex. 3. Find the value of § of 13s. 4d.

$$\frac{3}{3}$$
 of 13s. $4d. = \frac{3}{2}$ of $160d. = \frac{3 \times 160}{4}d. = (3 \times 32)d. = 96d. = 8s$. Ans

298. When the given fraction is a mixed number,—(1) multiply separately by the integer and by the fraction and add the products so obtained; or (2) reduce the mixed number to a fraction and proceed as in Art. 207, Case t.

Ex. Find the value of 314 of Re.1 4a.

The required value = Re.1, $4a. \times 3 + Re.1$, $4a. \times 1$.

$$= Rs \cdot 3$$
. $12a + 20a \cdot \times \frac{1}{15} = Rs \cdot 3$. $12a + 15a$.
 $= Rs \cdot 3$. $12a + 1a$. $8p - Rs \cdot 3$. $13a \cdot 8p$.

299. Before applying the Rule, reduce compound and complex fractions to simple ones.

Ex. 1. Find the value of 23 of 9 of 10a. 9p.

Here, 2# of #= # of #= 10.

: the required value =
$$\frac{10}{3}$$
 of $129p$. = $\frac{10 \times 129}{3}p$. = $(10 \times 43)p$.
= $430p$. = $Rs.2$. 3a. 10p.

Ex. 2. Find the value of $\frac{2}{3}$ of $7\frac{1}{3}$ of $\frac{81}{3}$ of 3 maunds.

Here,
$$\frac{7}{8}$$
 of $7\frac{1}{3}$ of $\frac{8\frac{1}{3}}{4} = \frac{7}{8}$ of $\frac{22}{3}$ of $\frac{17}{2} \times \frac{1}{4} = \frac{1309}{96}$.
 $\therefore 1\frac{1009}{100}$ of 3 mds = $1\frac{200}{3}$ mds. = $40\frac{20}{3}$ mds.;

$$\frac{29}{32}$$
 mds. = $\frac{29}{32} \times 40$ sr. = $\frac{29 \times 40}{32}$ sr. = $\frac{145}{4}$ sr. = $36\frac{1}{4}$ sr.;

the required value=40 mds. 36 sr. 4 ch.

300. The preceding Articles enable us to find the value of the sum or difference of fractional parts of magnitudes of the same kind.

Ex. 1. Find the value of \(^2_3\) of \(^1_4\) of a guinea -\(^2_7\) of 3s. 6d.

$$\frac{3}{5}$$
 of $f_{s} = \frac{2}{3} \times 20s = \frac{10}{3}s = 13s$. $4d.$
 $\frac{1}{5}$ of a gni $= \frac{4}{5} \times 21s = \frac{23}{3}s = 9s$. $4d.$

? of 3s.
$$6d = 3$$
 of $42d = (3 \times 6)d = 18d = 1s$. $6d$.
. the required value = £1. 1s. $2d$.

301. The following table, if carefully committed to memory, will greatly help a student in his calculations:

Examples LXXXI.

1. Find the respective values of :-

- (1) \$ of Re.1 ; 1 of Re 1 ; 1 of Rs.30 ; 1 of Rs.9 ; 1 of Rs.8.
- (2) 7 15 of Rs.50; 3 of Rs.2; 83 of 1 of 10a. 9p.; 12 of 3 of 5a.
- (3) \$ of £1 ; \$ of 1s. ; \$ of a guinea ; \$ of £1 ; \$ of £1 ; \$ of £1
- (4) 1 of £5; 4 of 6. 8d; 33 of 2s. 6d; 25 of a guinea; £31.
- (5) \$ of \$ of \$\frac{2}{47}\$ of 5 guineas; \$\frac{1}{47}\$ of a moidore; \$\frac{9}{4}\$ of \$\tag{3}\$. 4d; \$\frac{3}{4}\$ of £9.
- (6) \$ of a cwt ; \$ of 1 gr. ; \$ of 1 lb. ; \$\$ of a cwt. ; 2\$ of 8 cwt.
- (7) 1 of a ton; 2 of 6s. 8d.; 1 of 5s. 3d.; 7 of a mile.
- (8) \$ of a lb. Troy; \$ of a lb. Avoir.; \$ of a lb. Apoth.; 21 lbs. Tory.
- (9) 18 of 21 yds. ; 8 of 25 of 25 fur. ; 8 of an acre; 75 of an acre.
- (10) 21th of 15 of a cwt.; 15 of a week . 15 of t mo. of 28 days.
- (11) $\frac{1}{16}$ of 1 qr. ; $\frac{5}{6}$ of a bus. ; $\frac{5}{7}$ of a peck : $\frac{5}{15}$ of $\frac{5}{6}$ of $2\frac{7}{8}$ of $2\frac{1}{8}$ loads.
- (12) 81 of 17 cub. yds. ; & of 3 of 41 of 2 mds. ; # of 175 tons.
- (13) \$ of \$ of 103 hrs. ; \$ of a day ; 214 of a pipe of wine.
- (14) $\frac{6\frac{4}{3}}{3\frac{2}{8}}$ of £4; $\frac{3\frac{14}{5}}{12\frac{14}{5}}$ of 365 days; $\frac{3\frac{7}{12}}{4\frac{9}{5}}$ of $\frac{10\frac{9}{5}}{7\frac{1}{4}}$ of $\frac{77}{540}$ of a moidore.

(15)
$$\frac{3\frac{11_0^2}{4}}{20}$$
 of a ton; $\frac{6\frac{11_0^{10}}{12}}{14}$ of a week; $\frac{2\frac{7_0^{12}}{20}}{25}$ of £50.

2. Find the respective values of :-

- (1) \$ of 5 guineas+\$ of \$ of £1; \$ of 5 guineas-\$ of \$ of £1.
- (2) $\frac{a}{3}$ of a guinea + $\frac{a}{10}$ of $\mathcal{L}_1 + \frac{a}{10}$ of a crown + $\frac{a}{3}$ of 1s.
- (3) $\frac{3}{4}$ of a guinea $+\frac{2}{3}$ of a crown $+\frac{3}{5}$ of 7s. 6d. $-\frac{3}{4}$ of 2d. (4) $\frac{3}{5}$ of a ton $+\frac{4}{5}$ of a cwt. $+\frac{3}{5}$ of a lb. ; $\frac{4}{7}$ cwt. $+\frac{3}{7}$ $\frac{1}{10}$ oz.
- (5) % of a week + 3 of a day + 5 of an hour + 3 of a minute.
- (6) 3% miles 7% fur. + 35% po.; \$ of 28mds. + \$ of 12mds. + \$ of 8ch.
- (7) } of Rs.10½+½ of ½ of Rs.10−½ of ½ of Rs.2½+¼ of ₺ of 8a.
- (8) $\frac{15\frac{8}{5}}{7^{\frac{1}{5}}}$ of $£1 + \frac{1}{5}$ of £ $140\frac{21}{10} + 1\frac{13}{136}$ guineas.

(2) When the quantity is a combound one.

RULE. Multiply the quantity by the numerator and divide the product by the denominator of the fraction.

Ex. Find the value of \$ of Rs. 3. 9a. 4t.

The required value =
$$(Rs.3. 9a. 4p. \times 5) + 8$$

$$= Rs.17. 14a. 8p. + 8 = Rs.2. 3a. 10p.$$

302. To multiply a compound quantity by a mixed number, multiply separately by the integer and by the fraction and add the two products thus obtained.

Ex. Multiply £13, 155, 4d, by 42.

303. To divide a compound quantity by a fraction, multiply by the denominator and divide the product by the numerator.

Ex. Divide Rs.600. 13a. 4p. by 1.

The required value =
$$(Rs.600. 13a. 4p. \times 9) + 7$$

= $Rs.5407. 8a. + 7 = Rs.772. 8a.$

304. To divide a compound quantity by a mixed number, reduce the mixed number to an improper fraction and then proceed as in Art. 303.

Ex. Divide £5. 4s. 61d. by 18.

£. s. d.
5 4 6½
5 3 for
$$1\frac{1}{3} = \frac{3}{4}$$
. Hence the required value $= £3 \cdot 2s \cdot 8\frac{1}{4}$.d.

Note. Before applying the above Rules of both Multiplication and Division, the compound and complex fractions must first be reduced to simple ones.

Examples LXXXII.

- 1. Multiply :--(1) £3. 16s. 8\$d. by \$; £6. 18s. 7\dagged by \(\frac{1}{3} \) ; £10. 11s. 2\dagged d by 3\dagged.
- (2) Rs.50, 5a, 6b, separately by 93, 18-2, 53-2 and 15624.
- (3) £12. 5s. 7åd. by 6å; £13. 5s. 7åd. by 7å1; £34. 12s. 5åd. by 1177.
- (4) 5 tons 3 cwt. 6 fbs. separately by 48, 2077, 4628 and 213%.
- (5) 19 hrs. 43 m. 56 a sec. by 12 70; 10 ac. 3ro. 37po. 15 yds. by 10%.

REDUCTION OF FRACTION THOMS STATE TO THE STATE OF

2. Divide :(1) Rs.307. 4a. 4p. by 13; Rs.76. 10a. 8p. by 14; L5-42.64 (1976). (2) £25. 8s. 44d. by \$; £4 7s. 32d. by 12; £44116 1918. by 98.

(3) Rs. 173. 5a. 4p. separately by 28, 42, 87 and 201.

(4) 13 cwt. 3 qrs. 26 lbs. 15% oz. by 3%; 15 ac. 3 ro 25 po. by 1%. (5) 8 days 15hrs. 48m. 57} sec. by 4%; 12cub. yds. 20c.ft. 100in. by 15.

(6) I mi. 5 fur. 91 yds. 2 ft. by 27 of 177; 7 mds. 35 sr. by 18. 3. Find the respective values of :-

(1) \$\int_c\$ of \$R_{5.10}\$. \$a ; \$\pi\$ of \$R_{5.2}\$. 6a. ; \$\pi\$ of \$R_{5.31}\$. 8a. ; \$\pi\$ of \$R_{6.1}\$. 12a. (2) 3 of Rs.7, 5a. 4p.; 29 of Rs.51. 4a.; 23 of 33 of Rs.173. 12a.

(3) 11% of 6s. 111d. ; } of 5} of 2s. 9?d. ; # of 4c of 16s. 6d.

(4) 31 of £4. 14s. 6d.; 137 of £8. 8s. 51d.; 31/2 of Rs. 15. 12a.

(5) 311 of 3 mds. to sr. 8 ch.; 229 of 3 cwt. 3 qrs. 20 tbs.

(6) $\frac{31}{73}$ of 10 ft. $6\frac{1}{9}$ in. ; $\frac{4}{9}$ of $\frac{4}{48}$ of $3\frac{9}{9}$ sq. yds. ; $\frac{3\frac{5}{9}}{7^{\frac{5}{9}}}$ of $\frac{4}{7^{\frac{5}{4}}}$ of $4\frac{6}{2}$ cub. ft.

(7) 41's of 8 of 5 mi. 3 fur. 37 po. 48 yds.; 4 of 1 of 1 of 63048.

(8) 31 of (31 - 2) of 5 cwt. 2 qrs. 10 fbs. 77 oz. 1 26 of 7 of 1 mile.

(9) $\frac{3h}{24}$ of $(3\frac{\pi}{2} + 1\frac{3}{3})$ of 5 days $17\frac{3}{3}$ hrs. $\frac{4}{3h}$ of $\frac{4}{5-h}$ of Rs.10. 8a. (10) $\frac{7\frac{3}{4}-3\frac{1}{4}}{18\frac{1}{4}+\frac{3}{4}}$ of 3 ac. 1 ro. 35 po. ; $\frac{\frac{3}{4}+\frac{1}{4}(\frac{3}{4}-\frac{1}{4})-\frac{3}{4}(\frac{3}{4}+\frac{1}{4})}{\frac{3}{4}(\frac{3}{4}-\frac{1}{4})-\frac{3}{4}(\frac{3}{4}+\frac{1}{4})}$ of £44. 17s.

4. Find the values of :-(1) \$ of Rs.3. 5a. 4p. + \$ of Rs.21. 14a. + 17 of Rs.47. 3a. 4p.

(2) 12 of 32 of Rs. 13. 8a. + 2 of Rs. 6. 10a. 8b. - 2 of 15 of Rs. 3. 5a. 4b. (3) \$ of 6s. 8d + + of £2. 3s. 9d. + 17 of £4. 14s. 5d.

(4) \$ of £15+1 of 1/2 of \$ of £1. 2s. +\$ of 3d.

(5) \(\frac{15\beta}{5}\) of \(\mathcal{L}\)1+\frac{1}{3}\) of \(\mathcal{L}\)140. 10s. 6d. +2\frac{1}{3}\) of balf-a guinea.

(6) ²/₄ of £5. 10s. 6d. - ‡ of 2 guineas + ²/_{3k} of ⁴/₆ of £⁴/₆.

(7) \(\frac{1\frac{1}{3}}{1\frac{3}{3}}\) of \(Rs.84.\) 3a. \(6p. -\frac{31\frac{7}{3}}{4\frac{3}{2}}\) of \(\frac{70\frac{5}{3}}{7\frac{1}{3}}\) of \(Rs.20.\) 4a.

(8) 2 of 3 mds. 34 sr. + 3 of 8 mds. 9 sr. + 3 of 3 sr. 12 ch.

(9) 7% of a year of 365% days + 3,0 of % of a week + % of 5% hrs. (10) 5 yds. 2 ft. 5% in. × 7%-9 yds. 2 ft. 7% in. - 15 yds. 1 ft. 9% in.

+35+3 po, 3 yds. 2 ft. 3 in. +270.

305. Case II. To reduce a combound quantity to a traction of a higher denomination.

Proceed as in the following Examples.

- Ex. 1. Reduce 86., 6a. 106. and 14a. 46. to the fraction of a rupee. 86 = 3a = 3a × Re. 3 = Re. Jr. 6a. 10d. = 6a. 4.12a. = 65a. = 51 × Rc. 1. = Rc. 11. 14a. 4p. = 14a. + 14a. = 14a. = 42 × Re. 1 = Re. 12.
- Er. 2. Express od. 2s. 4d. and 18s. 117d. in nounds. od = 10s. = 1s. = 1 × f. In = f. on. 25. 4d = 25. + + 5. = 215. = 4 × f. sh = f. an. 18s. 113d. = 18s. + 15s. = 93s. = 93 × 63h = 68h.
- Ex. 3. Reduce £4. 9s. 21d. to pounds. 9s. 21d. = 9s. + fas. = 9fas. = 147 × fan = f.147. . f.4. 9s. 21d = f.4147. Ans.
- Ex. 4. Reduce 5 cwt. 3 grs. 24 lbs. to the fraction of a ton. 3 grs. 24 fbs. = 3 grs. + 8t grs. = 39 grs. = 1 × 39 cwt. = 1 x 27 cwt. = 37 cwt.

. s cwt. + 35 cwt. = 523 cwt. = .h x 525 ton. Hence 5 cwt. 3 grs. 24 lbs. = 1 x 147 ton = 167 ton. Ans.

Examples LXXXIII.

1. Reduce 3a, 6b, : 5a, : 5a, 10b, : 6a, 10b, : 7a, 8b, : 13a, 74b, : 154. 78h. ; each to the fraction of a rupee.

2. Express 4s. 11d. : 17s. 11dd. : 19s. 10dd. : 6s. 11dd. : 14s. 4dd. : 16s. ofd ; each as the fraction of a pound.

3. Express £1, 13s, 114d, 199, ; £3, 19s, 81d, ; £37, 16s, 61d, ; £5. 16s. 114d. gg.; each in pounds. 4. Reduce Rs.3. 10a. 8p.; Rs.8. 5a. 4p.; Rs.15. 10a. 7p.

Rs.81. 7a. 31 ps. to rupees. 5. Reduce 2 cwt. 1 gr. 16 hs. to the fraction of a ton; 3 grs. 27 lbs. Q oz. 12# drs. to the fraction of a cwt. ; 2 sr. 15 ch. 2 kan. to

the fraction of a maund. 6. What fraction is 2 ft. 9 in. of a pole ; 23 po. 4 vds. of a mile ; and 3 ro. 26 po. of an acre?

7. Reduce 3 fur. 20 po. 4 yds. 1 ft. o in. to the fraction of a mile, and 1 sq. ft. 4 sq. in. to the fraction of a sq. yd.

8. Reduce 4 mds. 37 sr. 8 ch. to maunds ; 2 bi. 15 kat. 5 ch.

to bighas ; and 2 qts. It pt. to the fraction of a barrel. 9. Express 5 bus. 3 pks. 1 gal. as the fraction of a quarter.

10. Express 2 wks. 5 days 18 hrs. as the fraction of a year of 365 days, and 3 ro. 271 po. as the fraction of an acre.

11. Reduce 72 days 6 hrs. 56 m. 15 sec. to the fraction of a

year of 365} days, and 1 sc. 13 grs. to the fraction of a lb. 12. Express 1 day 1 hr. 4 dan. 30 pals and 3 mo. 12 days as fractions of a year.

306. To find what fraction one concrete quantity is of any other of the same kind.

RULE. Reduce both the quantities to the same denomination: then the fraction whose numerator is the first and denominator the second of these results, will be the one required.

Ex. 1. Reduce Rs.2, 8a. 2h. to the fraction of Rs.2, 12a.

Rs.2. 8a. 2p. = 482p.; and Rs.3. 12a. = 720p.

... the required fraction = $\frac{482p}{720p} = \frac{241}{260}$. Ans.

Ex. 2: What part of 40 of £1 is 30 of a guinea?

3% of a gui = 15 x 215. = 314s., and 4% of £1 = 14 of 205. = 134s. the required fraction = \$15s. +125s. = 3. Ans.

Ex. 3. What fraction is 1 md. 4 sr. of 2 mds, 32 sr. ?

1 md. 4 sr. = 44 sr. ; and 2 mds. 32 sr. = 112 sr.

: the required fraction = $\frac{44 \text{ sr.}}{112 \text{ sr.}} = \frac{11}{28}$. Ans.

307. By means of the preceding Articles, magnitudes of the same kind, consisting of fractions of simple or compound quantities, and connected by the operations of Addition or Subtraction, may be reduced to simple fractions of a given denomination.

Ex. 1. Express # of a guinea- 2 of a shilling - 4 of 75. 6d as the fraction of £2, 10s, 6d.

Here, $\frac{3}{4}$ of a guinea = $\frac{3}{4} \times \frac{1}{4} = \frac{1}{4} \times \frac{1}$ and \$ of 7s. 6d = \$ of 7bs = £ \$ x 15 x 1 = £1.

... the exp. $= f(\frac{1}{10} - \frac{1}{10} - \frac{1}{10}) = f(\frac{11}{10}) = f(\frac{11}{10})$.. the required fraction = £112 + £110 = 112 × 12 = 1. Ans.

Ex. 2. Reduce 2 of Rs. 10 - 2 of Rs. 10. 8a. to the fraction of Rs.5. 4a.

\$ of Rs. 10 = Rs. 10 : \$ of Rs. 10. 8a, = \$ of Rs. 10k = Rs. \$).

: the difference = Rs.(2 -21) = Rs.161; also Rs.5, 4a. = Rs.21.

.. the required fraction = Rs. 161 + Rs. 21 = 161 × 31 = 705. Ans.

Ex. 3. What fraction of Rs.10. 8a. together with Rs.2. 4a. is equivalent to Rs.7. 8a.?

Here, Rs.7. 8a. - Rs.2. 4a = Rs.5. 4a.

Now, the question reduces itself to finding—What fraction of Rs.10. Sa is Rs.5. 4a?

Rs.5. 4a. =84a.; and Rs.10 8a. = 168a.

 \therefore the fraction required = $\frac{84n}{168n} = \frac{1}{2}$. Ans.

Ex. 4. What fraction of £2, 10s. is the sum which being diminished by 10s, 6d is equal to £2. 2s.?

The meaning is—What fraction of £2. los. is £2. 2s. + los. 6d. ? £2. 2s. + los. 6d. - £2. 12s. 6d. = £2! = £2!;

also £2. 10s = £21 = £1.

: the required fraction = $\mathcal{L}_{8}^{21} + \mathcal{L}_{8}^{\frac{1}{2}} = \frac{21}{8} \times \frac{2}{8} = \frac{21}{80} = 1\frac{1}{80}$. Ans.

Ex. 5. Compare the values of $\frac{7}{8}$ of £1, $\frac{6}{9}$ of a guinea, and $\frac{7}{9}$ of 15s. $7\frac{1}{8}d$

 $\frac{1}{6}$ of $\pounds 1 = \pounds_{6}^{2}$; $\frac{1}{6}$ of a guinea $= \frac{1}{6} \times \pounds_{6}^{2} = \pounds_{77}^{2}$; $\frac{2}{3}$ of 15s. $7\frac{1}{6}d = \frac{2}{3}\frac{1}{6}$. Now, to compare \pounds_{6}^{1} , \pounds_{78}^{2} , \pounds_{88}^{2} , reduce them to equivalent fractions with the same denominator, and proceed as in Art. 257.

The L. C. M. of the denominators 8, 12, 48 is 48;

$$\therefore \pounds_8^7 = \pounds_{8 \times 6}^{7 \times 6} = \pounds_{48}^{42}; \ \pounds_{12}^7 = \pounds_{12 \times 4}^{7 \times 4} = \pounds_{48}^{28}; \ \pounds_{48}^{25} = \pounds_{48 \times 1}^{25 \times 1} = \pounds_{48}^{25}$$

.. \$ of £1 is the greatest and \$ of 15s. 7\d is the least. Ans.
Ex. 6. What sum is that \$ of which is Rs.2. 10a. 8\$.?

What sum is that \(\frac{1}{2} \) of which is Rs.2. 10a. 8
 Rs.2. 10a. 8p. = Rs.2\(\frac{1}{2} \) = Rs.2\(\frac{1}{2} \).

, the required sum = $Rs.\frac{5}{5} + \frac{2}{5} = Rs.\frac{5}{5} \times \frac{1}{5} = Rs.6$, 10a. 8p. Ans.

Examples LXXXIV.

1. Express :-

(1) Rs.4, 15a, 4b, as the fraction of Rs.6, 11a, 4b, and Rs.7, 7a, 2b, as the fraction of Rs.31, 4a, 5b.

(2) Rs.25. On 6p. as the fraction of Rs.29. Sa, 6p.

(3) £1. 7s. 8½d. as the fraction of £2. 7s. 6d.; and £3. 4s. 0½d. as the fraction of £7. 7s. 11d.

(4) 13s. 10ld. 3q. as the fraction of £2. 9s. 7d.

- (5) It of £5. 17s, 4d and \$ of 60 of £1. 12s. 11d as fractions of £10.
- (6) 2 fur. 29 po. 2 ft. 10 in. as the fraction of 1 mi. 5 fur. 16 po.

(7) £22. 135. 82d as the fraction of 32 guineas.

- (8) $\frac{7\frac{2}{3}-3\frac{1}{12}}{15\frac{1}{3}+\frac{7}{3}}$ of £33. 14s. $5\frac{7}{4}d$, as the fraction of £157. 17s. $8\frac{1}{2}d$. 2. Reduce:—
- (1) \(\frac{1}{2} \) of 2s. 4\(\frac{1}{2} \) d to the fraction of a half crown; and 9s. 10\(\frac{1}{2} \) d. to the fraction of 13s. 2\(\frac{1}{2} \) d.

(2) 638 of Rs. 15. 3a 10p, to the fraction of Ri.31. 8a. 2p.

(3) 33] of 1 md. 2 sr. to the fraction of 3] of 28 mds.; and 32 seers to the fraction of 3 mds. 22 sr. 2 ch.

(4) 25 of 2 bi. 7 kat. 4 ch. to the fraction of 4 bi. 11 kat.

(4) 2 51 2 51. 7 km. 4 cm. to the fraction of 28 mds.; and 12\(\frac{1}{2}\) of 15 sr.

12 ch. to the fraction of 30 mds. 32 sr.

(6) 3 qts. 1 pt. 23 gills to the fraction of 5 gals. 2 qts. 1 pt.

(7) 2 sq. yds, 2 ft. 120 in. to the fraction of 3 sq. po. 13\(\frac{1}{2}\)yds. ff. 72 in.
(8) 12 02. 12\(\frac{1}{2}\) drs. Avoir, to the fraction of 1 lb Troy; and 35 lbs.
8\(\frac{1}{2}\) oz. Troy to the fraction of a cut.

(9) 2% half-guineas to the fraction of 10s, 111d.

- (10) 727 of 10 oz. 18 dwts. 11 grs. to the fraction of 8 lbs. 8450z. Avoir.
 - 3. What part of 2 of 2 of 3 guineas is 2 of 2 of 15s. 9d.?
 4. What part of 13 cwt, 2 grs. 21 lbs. is 11 cwt. 1 gr. 14 lbs. 15 oz.?
 - b. What part is 6 ft. 3# in. of 13 ft. 8 ft in.?

6. What part of a maund is 10 sr. 13 ch. 2 kan.?

- What fraction of 13 of Rs. 2. 5a. 8p. is 31 of 33 of Rs. 12. 9a. 3p., and of 7 guineas is 3 of a moidore?
- 8 What fraction of 3 cwt. 2 qrs. 14 lbs. is 3 cwt. 19 lbs. 2 oz.?
 9. What fraction of a year of 3653 days is 27 days 16 hrs. 2q min. 4 sec., and of 1 oz. Avoir, is 1 oz. Troy?
- 10 What fraction of 19th of 4 cub. yds. 18 ft. 1127 in. is $\frac{1}{12}$ of 200 cub. yds., and of 24 miles is 35 furlongs?
- 11. What fraction of $\frac{7\frac{4}{8}}{4\frac{8}{8}}$ of Rs. 306. 9a, 10h, is $(8\frac{4}{8} 3\frac{8}{8})$ of Rs. 54. 15a, 8b, and of 21 tons is $\frac{8}{8}$ of 2 lbs.?

12. What fraction of 8 lbs. 12t oz. is 3 lbs. 9 oz. 621 grs. ?

13. How many times is-

(1) Rs.9. 12a. 4½p. contained in Rs. 7. 9a. 7½p.?
 (2) £24. 16s. 4hd, contained in £335. 1s. 0?d.?

(3) 2 tons 2 cwt, 2 qrs. contained in 3 cwt. 14 lbs.?

(4) 7 kathas 9 ch. contained in a bigha?

14. Express $\frac{3\frac{5}{2}}{7\frac{5}{4}}$ of $\frac{4}{7^{\frac{1}{4}}}$ of $R_{5,33}$. 11a. 6p., and $\frac{5}{2}$ of $\frac{7}{3\frac{5}{4}}$ of $R_{5,19}$. 1a. 7p. in terms of $R_{5,79}$. 5a. 10p. as unit.

- 15. What is the measure of 7_5^6 of $3_4^{\frac{34}{3}}$ of 5 cwt. 3 qrs. 31 lbs. when the unit is (5% - 31) of 3 tons 16 cwt. 3 qrs. 22% fbs. ?
 - 16. Express :—
- (1) \$ of \$\frac{1}{4}\$ of \$13s\$, \$4d\$, \$+\$ of \$\frac{1}{4}\$ of 10s. 6d. as the fraction of \$\infty\$1.
- (2) \$ of a guinea + \$ of £1+\$ of 1s.+\$ of 1d. as the fraction of a guinea, and of £24. 35.
- (3) # of Rs.2, 8a, + 4 of 8x, as the fraction of Rs.10, 8a,
- (4) 2 of Rs. 3, 8a. +2 of Rs. 5, 4a. -2 of Rs. 10. 8a. as the fraction of Rs. 13. 8a., and of Rs. 30. 8a.
 - (5) of £13. 10s. 10 d. 7 of £1. 2s. 9d. as the fraction of £6.
 - (6) Rs.74-8 of Rs.7 as the fraction of Rs.103. 5a. 4h.
 - (7) $\frac{3h}{1.1}$ of $\left\{\frac{19}{120} \text{ of } 51 \frac{17}{48} \text{ of } 1s.\right\}$ as the fraction of 27s.
 - 17. Compare the values of :--(1) To of £1, to of a guinea and ak of a crown.
- (2) 27 of £1, 25 of £1, 1s. and 1 of 3s. 91d.
- (3) 2 of Rs.10, 2 of Rs.10, Sa, and 3 of Rs.7, 134.
 - (4) 1 of a maund, 2 of 14 sr. and 4 of 3 sr. 6 ch.
 - (4) 3 of 5 days, \$ of 20 hours, and \$ of 59 min.
- 18. What fraction of Rs. 100 together with Rs. 36. 12a. is equivalent to Rs. 52. 8a. ?
- 19. What fraction of 3 mds. 20 sr. together with 1 md. 9 sr. will give 42 mds. ?
- 20. What fraction of a ton added to 13 of 2 cwt. will make it equal to I cwt. 2 qrs. 11 fbs. ?
- 21. What fraction of 2 tons 12 lbs. is the weight which being diminished by I cwt. 20 lbs. is equal to I cwt. I qr. 8 lbs.?
- 22. What fraction of Rs.29. 12a. must be added to 34 of (35+
- 12) of Rs.6. 9a: to make the sum equal to Rs.32. 8a.?. 23. What fraction of a mile diminished by 39 yds. I ft. 9 in. is equal to 87 yds. 9 in.?
 - 24. What fraction of 2 lbs. 10 oz. Avoir, must be added to 1 lb. 8 oz. Troy to give 3 fbs. 7 oz. 10 dwts.?
 - 25. What sum is that \$ of \$ of which is \$ of \$ of Rs.s. 100.7
 - 26. What length is that 27 of which is \$ of 7% of 16% yards?
 - 27. What is the sum 1325 of which is (424-1012+925-713) of 8p., and what fraction is it of % of Rs.6. 8a.?

28. What weight is the same fraction of 15 cwt. 2 grs. 13 fbs. that £1. 11s. 10ld is of £3. 10s. 1ld?

XIII. SIMPLIFICATION OF CONCRETE FRACTIONS.

308. It should be borne in mind what has already been said that when a concrete number is divided by another concrete number of the same kind, the quotient is an abstract number.

Rx. 1. Simplify
$$\frac{9}{2}$$
 of $\frac{12}{12}$ of $\frac{12}$

Ex. 2. Simplify
$$\frac{\mathcal{L}_{1.3}^{1.1} \cdot 115.}{\mathcal{L}_{2.3}^{1.0} \cdot 175.}$$
 od $1^{4/3} \cdot yds.$ of $\frac{1}{5}$ fit of 13 days 3 hrs.

The result= $\frac{31\frac{3}{5}}{572.}$ of $\frac{426\frac{5}{5}}{176}$ fit of 134 days= $\left(\frac{95}{3} \times \frac{1}{57}\right)$ of $\frac{15}{77}$ of $\frac{15}{6}$ days $\frac{9}{3 \times 57} \times \frac{2134 \times 10}{5 \times 77} \times \frac{105}{5}$ days

$$= \frac{5}{9} \times \frac{388}{7} \times \frac{105}{8} \text{ days} = \frac{2425}{6} \text{ days} = 404 \frac{1}{8} \text{ days} = 404 \frac{1}{8} \text{ days} = 4 \frac{1}{10} \text{ day$$

Examples LXXXV.

Simplify the following :-

1. 1] of
$$\frac{4\frac{1}{3}}{5\frac{1}{4}}$$
 of $\frac{18s. 6\frac{3}{4}d}{61}$ of 3 days 2 hrs. 2. $\mathcal{L}_{3}\frac{9\frac{1}{3}}{6s}$ of 2 mds. 32 sr.

6.
$$\frac{\frac{1}{3} - \frac{2}{8}}{6\frac{1}{8} - \frac{14}{9}}$$
 of $\frac{£1}{£2}$. 11.8. 8d. of $\frac{142 \text{ vds. } 0\frac{4}{9} \text{ ft.}}{2 \text{ yds. } 1\frac{1}{16} \text{ ft.}}$ of 13 days 3 hrs.

7.
$$\frac{7 \text{ tons } 13 \text{ cwt. } 1\frac{1}{3} \text{ qrs. } 14 \text{ lbs.}}{15 \text{ cwt. } 3 \text{ qrs. } 7 \text{ lbs. } 12 \text{ oz.}} \text{ of } \frac{£15. \text{ 10s. } 6\frac{3}{4}d.}{8s. \text{ gd.}}$$

9.
$$\left(\frac{3\frac{1}{2}}{2\frac{1}{6}} \frac{\text{of } 5\frac{1}{3}}{3\frac{1}{7}} + \frac{2r_{1}^{2}}{3\frac{1}{7}} \frac{\text{of } \frac{1}{3}}{6}\right)$$
 of $\frac{1s. 5d}{4s. 7d.}$ of $\frac{2 \text{ ft. 3 in.}}{5 \text{ ft. 5 in.}}$ of 24 weeks 4 days 10 hrs.

10. Reduce $\frac{£2.36.4d.}{£5.6s.8d.}$ of $\frac{2 \text{ tons } 4 \text{ cwt.}}{5 \text{ tons 10 cwt.}}$ to a complex fraction having 12½ for its numerator, and also to a complex fraction having 55 for its denominator.

XIV. MISCELLANEOUS PROPOSITIONS.

(ON VULGAR FRACTIONS.)

309. The Unitary Method. We have in Art. 171 given an outline of this method and treated it in the case of integers. We now propose to extend the method to fractional quantities. The following solutions, we hope, will serve as a quide to the students.

If the value, weight, length, &c. of one thing be given, the value, weight, length, &c. of any number of them (whether integral or fractional or mixed) may always be found by Multiplication; and conversely, if the value, weight, length, &c. of me produced in the converse of the state of the converse of the girls, the District which is the state of the may always girls, the District with the converse of the may always the converse of the converse of the may always and the converse of the

Ex. 1. If a yard of lace cost Re.1. 6a. 6p., what will 7 yds. 4 in cost?

Here, Re. 1. 6a. 6p. = Rs. $1\frac{1}{2}\frac{3}{2}$; and 7 yds. 4 in. = $7\frac{1}{2}$ yds. The cost of 1 yard = Rs. $1\frac{1}{2}\frac{3}{2}$

the cost of $7\frac{1}{6}$ yds. = $Rs.1\frac{1}{3}\frac{3}{2} \times 7\frac{1}{6} = Rs.\frac{4}{3}\frac{3}{2} \times \frac{4}{3} = Rs.10$. Ans. Ex. 2. If the cost of 20 $\frac{3}{2}$ yds. of cloth be Rs.173. 5a. 4p., find the cost per yard of the same quality.

The cost per yard = Rs. 173. 5a. 4p. $+20\frac{1}{5} = \frac{Rs. 173. 5a. 4p. \times 5}{10^4}$

= Re.1. 10a. 8p. × 5 = Rs.8. 5a. 4p. Ans.

Ex. 3. If 3 tbs. of tea cost Rs.7. 101., how much can I buy for Rs.41. 15a.?

Here, Rs.7. 10a. = Rs.74; and Rs.41. 15a. = Rs.41+8.

The cost of 32 lbs. = Rs.75 :

, the cost of 1 lb = $Rs.7\frac{1}{8} + 3\frac{1}{8} = Rs.(\frac{0.1}{8} \times \frac{1}{17})$;

... the read. no. of lbs. = $Rs.41\frac{1}{16} + Rs. \binom{61}{8} \times \binom{61}{17}$

 $=\frac{a_{13}^{2}}{16} \times \frac{a_{13}^{2}}{16} \times \frac{1a_{13}^{2}}{16} = \frac{18\sqrt{a}}{16}$. Ans. Ex. 4. If $\frac{a}{3}$ of an estate be worth Rs.2200, find the value of $\frac{a}{3}$ of it.

of the estate is worth Rs.2200;

the whole estate is worth Rs.2200+ = Rs.3300;

. A of the estate is worth $Rs.3300 \times P_1 = Rs.300$.

Ex. 5. A person, possessed of 3ths of a coal mine, sells 3ths of his share for £2000; what is the whole mine worth?

I ilis share to Eagoo ; what is the whole little worth?

Here, the part sold= $\frac{3}{4}$ of $\frac{3}{6}$ of the whole mine= $\frac{3}{16}$ of the mine. The cost of $\frac{3}{16}$ of the mine= $\frac{1}{2000}$;

; the cost of the whole mine = $£2000 \times \frac{10}{10} = \frac{1}{10} \times £20000$ = £6666, 125, 4d. Ans

 $= \frac{2}{6}6666. \text{ 13.s. 4d.} \quad Ans.$ Ex. 6. Express $\frac{2}{3}$ of $\frac{1}{3}$ of a mile in terms of a metre, supposing

32 metres = 35 yards.
35 yards = 32 metres; . . 1 yard = (32-35) metres;

... g of 15 of a mile = (8 × 1/4 × 1760) yds.

 $=(\frac{3}{3} \times \frac{14}{9} \times 1760 \times 32 + 35)$ metres = $\frac{45050}{9}$ metres = 166882 metres.

Ex. 7. If 5 men or 7 women can do a piece of work in 37 days; in what time will 7 men and 5 women do the same piece of work?

The work of 5 men = that of 7 women;
,, the work of 1 man = that of 7 women,

the work of 7 men = that of \$\frac{1}{2}\$ women;

the work of 7 men + 5 women = that of (*1 + 5) women

that of τ_a women.

Now, 7 women do the work in 37 days.

... I woman does the work in (27 × 7) days.

., I woman does the work in (37×7) days,
., woman do..... (37×7+%) days,

Hence the required time=37×7× /3 days=173 days. Ans.

Ex. 8. If the six penny lost weigh $4\frac{a}{5}$ lbs, when wheat is 6s. 9d. a bushel, what is the price of wheat per bushel when the same lost weighs $3\frac{1}{5}$ lbs.?

The loaf weighs 4 lbs, when wheat is 62s, a bus. ;

... ... 1 lb. (6½ × 4½) v. a bus. ; 3½ lbs. (6½ × 4½ + 3½) r. a bus.

Hence the required price="2" x 14" x 2s. = 9s. Ans.

Ex. 9. If 1000 men have provisions for 85 days, and if after 17 days, 150 of the men go away, find how long the remaining provisions will serve the number left.

Here 85 ~ 17=68; and 1000 - 150 = 850.

or 80 days. Ans.

Ex. 10. If the cost of maintaining a family be Rs.50 a month, when rice is 12 seers a rupee, and Rs.48 when rice is 14 seers a rupee; what will be the cost when rice is 16 seers a rupee?

The price of I sr. is first reduced from $Re, \frac{1}{L_{\Sigma}}$ to $Re, \frac{1}{L_{+}}$ and lastly to $Re, \frac{1}{L_{+}}$.

Now, $\frac{1}{12} - \frac{1}{18} = \frac{1}{8}$ and $\frac{1}{18} - \frac{1}{16} = \frac{1}{48}$; also 50 - 48 = 2.

Since a reduction of Re_{-j_a} in price causes a diff. of Rs.2 in expenses

Hence the required expenses = (Rs. 50 - Rs.3. 8a.) = Rs.46. 8a. Ans.

Examples LXXXVI.

- 1. Find the value of 5 3yds. of silk, when 3 4yds. cost Rs. 21. 14a.
- If 12\frac{1}{3} articles cost Rs.26. 3a, 4\hbeta_1 how many can be bought for Rs.117. 3a. 8\hbeta.?
- 3. If 3 cwt, 3 qrs. 21 lbs. 124 oz. cost £4. 8s. 9d., what is the price per cwt.?
- 4. If a silver cup weighing 20 oz. 19 dwts. 27 grs. cost Rs.57.
 - 5. If 40 oz. of tea cost 82r., what will 309 lbs. cost?
- If \$\frac{1}{2}\$ of a lottery ticket cost \$\mathcal{L}_4\$ ios what is the price of \$\frac{1}{2}\$ of a ticket?
 The owner of \$\frac{1}{2}\$ of a ship sold \$\text{A}\$ of \$\frac{1}{2}\$ of his share for.
- 1. The owner of $\frac{1}{2}$ of a ship sold $\frac{1}{2}$ of $\frac{1}{2}$ of it cost, at the same rate?
- 8. Express a degree of 69½ miles in metres, where 32 metres are equal to 35 yards
- 9. If the sum paid for 247 bottles of wine amount, together with the duty, to \$6.774\$, 7a. 2\$\delta\$, and the duty on each bottle be \$\frac{1}{2}\$th part of its original cost; what is the duty per bottle?
- 10. If the rent of 30 ac. 2 ro. 20 po. be Rs. 1485. 15a., what is the rent of 6 acres?
- 11. If h of a ship be worth Rs.365. 5a., what share of it will cost Rs.1252. 8a.?
- 12. A ship is worth Rs. 160000 and a person possessed of $\{y\}$ of it, sells \S of his share; what share has he remaining, and what is
- it worth?

pays for himself and three friends the sum of Rs.54. 14a. 8p.; how many were there?

14. If 7 men or 11 women can finish a piece of work in 17 days, how many days will it take 11 men and 7 women to finish it?

15. If 74 men had provisions for 35 days, and if after 5 days, 20 men were sent away; how long will the provisions last the remaining men?

18. If 6 men or 10 women can do a piece of work in 12 days, in what time will 5 men and 7 women do a piece of work twice as great?

17. If 3% tons of goods are carried 49 miles for Rs.19. 6a., how far ought 26 tons 5 cwt. to be carried for the same money?

how far ought 26 tons 5 cwt. to be carried for the same money?

18. If 224 cwt. be carried 20 miles for Rs.5, 7a; what weight

can be carried the same distance for R. 14. 8a.?

19. The four-penny loaf weight i lb. 15½ oz., when wheat is at

Ine rour-penny loat weights in 15½ 62, when wheat is at 7s. 11d. per bushel; find what its weight should be when wheat is at 7s. 1½d. per bushel.

20. A fortress is provisioned for 3 weeks at the rate of 15 ch. a day for each man; if only 10\(\tilde\) ch. be served out daily to each man, how long can the place hold out?

21. A borrowed of B Rs.1752. &a. for 102 days, and afterwards would return the favour by lending B the sum of Rs.2103; for how long should he lend it?

82. A besieged town, containing 22400 inhabitants, has provisions to last 3 weeks; how many must be sent away, that they may be able to hold out 7 weeks?

83. If the two-anna loaf weighs 4 ch., when wheat is Rs.3. 6a. a mund: what would be the price of wheat per maund when the same loaf weighs 3 ch.?

24 When rice is Rs.3 a maund, how many people can be feed for the same sum that would feed go people when rice is Rs.2. 8a. a maund?

25. If 2000 men have provisions for 95 days, and if after 15 days 400 men go away, find how long the temaining provisions will serve the number left.

26 The monthly expenditure of a shop in oil is Rs.40. 8a, when oil is sold at $3\frac{\pi}{2}$ seers a rupee; what will it amount to when the price of oil has risen to 4a. 10^{4} , per seer?

27. A piece of cloth, measured with a yard measure which is 1 of an inch too short, appears to be 10½ yards long; what is its true length?

28. The expenses of a family when rice is sold at 20 seers a rupee are Rs.50 a month; when rice is sold at 25 seers a rupee the

expenses are R 1.48 a month; what will they be when rice is sold at 30 seers a rupee?

310. Bankruptev or Insolvency.

A trade-man becomes bankruph or insolvent, when the money that he owes is more than that which he has in his possession. What he owes is alled his likabilities or debts; his property or what he possesses is called his flotts or absets. He is the debtor; those to whom he owes anything are his orditors. The amount paid by bankruphs is generally reckoned at so much in the same fraction of the assets that the money due to him is of the bankruphs whole debts.

Thus, if the assets amount to $\frac{2}{3}$ of the debts, each creditor receives $\frac{2}{5}$ of a rupee for each rupee due to him; and the bankrupt is said to pay a dividend of 10a, 8b, in the rupee.

Book-debts are moneys which other men owe to the bankrupt; they are, therefore, considered a part of his assets. Bookdebts may be good or bad, as the whole or part can be recovered or realized.

Ex. 1. A bankrupt's estates amount to Rs.3780 and his debts to Rs.5040; how much can be pay in the rupee?

On Rs. 5040 he can pay Rs. 3780;

. in one rupee he can pay Re. \$648 or Re.\$. Hence he can pay Re.\$ or 12a. Ans.

Ex. 2. A bankrupt's debts amount to Rs.3240, and he can pay 5a. 4p. in the rupee; find the amount of his assets

On every rupee of debts he can pay 53a. or Red;

Ex. 3. A bankrupt can pay toa. 8p. in the rupee; had he Rs.4350 more he could have paid 12a. in the rupee. Find the amount of his debts and assets.

Here, 12a - 10a. 8p = 1a. 4p = Re, $\frac{1}{4}a$. He could have paid Re, $\frac{1}{4}a$ more on Re, 1 of his debts; $\frac{1}{4}a$ be could have paid Re, 1 more on Rs, 12 of his debts. $\frac{1}{4}a$ $\frac{$

Hence his debts = $Rs.12 \times 4250 = Rs.51000$; also his assets = $10a.8p. \times 51000 = Rs.31000$.

Ex. 4. A creditor receives on a debt of £296 a dividend of 123, 4d in the £, and he receives a further dividend of 3s, 9d in the £ upon the deliciency; find how much the creditor receives in all.

The first payment = $\mathcal{L}(12\frac{1}{2}+20)$ or \mathcal{L}_{1}^{2} on \mathcal{L}_{1} of debt; the deficiency = $\mathcal{L}(1-\frac{2}{3}\frac{1}{3})$ or \mathcal{L}_{2}^{4} on \mathcal{L}_{1} of debt.

Also the second payment = $\mathcal{L}(3_1^0 \div 20)$ or $\mathcal{L}_{1_n}^{\circ}$ on \mathcal{L}_1 of deficiency;

... the second payment = $\mathcal{L}_{18}^{2} \times \mathcal{L}_{68}^{20}$ or \mathcal{L}_{125}^{20} on \mathcal{L}_{1} of debt ... first payment + second payment = $\mathcal{L}(\frac{2}{65} + \frac{2}{320})$ on \mathcal{L}_{1} of debt = $\frac{2}{66}$ or \mathcal{L}_{1} of debt.

Now, in £1 of debt the creditor receives £ 800 ;

in £296 of debt.......£ \$ 1 × 296.

Hence the creditor receives $\mathcal{L}_{980}^{641} \times 296 = \underline{\mathcal{L}}_{203}$. 16s. 2d. Ans.

Ex. 5. A bankrupt has book-debts equal in amount to his inbilities but on \pounds_3 000 of them he can only recover 6x. 8d. in the \pounds_3 , and the expenses of the bankruptcy are \pounds_5 for every \pounds_1 000 of the book-debts; if he pay 15x in the \pounds_3 , what is the amount of his liabilities?

As he can recover 6s. 8d. or \mathcal{L}_{0}^{+} in the \mathcal{L}_{0} , he recovers $\mathcal{L}_{0}^{+} \times 3000$ or \mathcal{L}_{1}^{+} 2000 out of \mathcal{L}_{2}^{+} 3000; therefore his loss amounts to \mathcal{L}_{2}^{+} 2000. Again, he pays \mathcal{L}_{0}^{+} 5 or \mathcal{L}_{1}^{+} 00, or 1s. in the \mathcal{L}_{1}^{+} for expenses. Therefore he recovers (13+1)s. or 16s. in the \mathcal{L}_{0}^{+} and his loss per \mathcal{L}_{0} =4s. or \mathcal{L}_{0}^{+} .

Now, & is the loss on &t of liabilities,

£1.....£5 × 2000...........£5

Hence liabilities = £5 x 2000 = £10000. Ans.

Examples LXXXVII

1. A bankrupt's estates amount to Rs.950 and his debts to Rs.1200; how much can be pay in the rupee?

 A bankrupt's debts amount to £5069, 10st, and he can pay 14s. 11\frac{1}{2}d in the £; find the value of his assets.

 A bankrupt's debts amount to Rs.35000, and his assets to Rs.13708. 5a. 4p.; find how much his estate will pay in the rupee.

4. A bankrupt's effects amount to Rs. 1980, and he pays his creditors 13a. 45 in the rupee; what do his debts amount to?

 A bankrupt's debts amount to Rs.53422. 8a. and his creditors lose Rs.17362. 5a; find how much in the rupee the bankrupt pays.

A bankrupt owes A Re.5156. 4a., B Rs.4070 and C Rs.2933.
 4\(\phi\). i his estate is worth Rs.9119. 11a; how much can be pay in the rupee, and what will 4, B and C each receive?

7. A bankrupt owes Rs. 9000 to his three creditors; and his whole property amounts to Rs. 6750; the claims of two of his creditors are Rs. 1750 and Rs. 3750 respectively; what sum will the remaining creditor receive for his dividend?

- 8. A creditor received 16s. 3d in the f., and thereby lost f.135. tor, : how much was due to him?
- 9. A bankrupt's debts amount to £1700, and his assets to £,900 15s; after paying costs his creditors receive 5s. 9d. in the £; find the amount of the costs.
- 10. A bankrupt has good debts to the amount of £456, 18s. 1d., and the following bad debts, £360. 7s. 10d., £120. 13s. and £19. 18s. for which he receives respectively 4. 5 and 9 shillings in the f.; his own liabilities amount to f. 3408, 125; how much can he pay in the £?
- 11. A creditor received on a debt of Rs. 3600 a dividend of Qu. 10th in the rupee; and a further dividend of 6a. 8th upon the remainder. What did he receive altogether?
- 12. A bankru't can pay 12s. 4d. in the f : if his assets were. £4205 more, he could pay 15s. 8d in the £. Find his debts and alesets.
- 13. A bankrupt has book-debts equal in amount to his liabilities; but on Rs.8640 of such debts he can recover only 8a. 6p. in the rupee, and on Rs.6300 only 5a. 3p. in the rupee. After allowing Rs.1054, 11a, for the expenses of bankruptcy, he finds he can pay his creditors 124. in the rupee. Find the total amount of his debts.
- 14. A bankrupt pays £5850 on the whole liabilities, at the rate of 13s. 6d in the £ on half his debts and 15s. 9d in the £ on the other half ; find the amount of his debts.
- 15. A bankrupt can pay 112. in the rupee; had he Rs.2550 more, he could have paid 142 in the rupee. Find the amount of his debts and assets.
- 16. A bankrupt has book debts equal in amount to his liabilities; but on £6000 of them he can only recover 13s. 4d. in the pound, and the expenses of the bankruptcy are £5 on every £100 on the book-debts; if he pay 13s, in the pound, what is the amount of his liabilities?

311. Incomes, Taxes and Rates.

Proceed as in the following Examples.

Ex. 1. If the income-tax be at the rate of 4th, in the rupee, and a man has to pay Rs.13. 62. 8p., what is the amount of his income?

Here, Rs. 12. 6a. 8p. = Rs. 1344.

He pays Re. To or Re. To income-tax on every Re. 1 of income :

.. he pays Re I income-tax on every Rs.48 of income ;

Hence income required = Rs.48 × 141 = Rs.644. Ans.

Ex. 2. After paying an income-tax of 86 in the rupee, a man has Rs.7283. 5a. 46. left; find his gross income.

Here, Re.1 - 8p. = 15a. $4p. = Re.\frac{3}{2}$; and Rs.7283 5a. 4p. = Rs.7283.

Since Real is left out of Re.1 of income ;

Hence income required = Rs.24 × 21 850 = Rs.7600. Ans.

Er. 3. Find a man's gross rental, if after paying an incometax of 6d. in the £ on the whole, and 3s. 6d. in the £ on § of his rental, his net income is £2700.

Tax on £2 at 3s. 6d = 2 × 42d = 311d.

., total amount paid in taxes = (6+311)d. or 371d. in the £.

, he has $(240-37\frac{1}{2})$ or $202\frac{1}{2}d$, or $\pounds_{\frac{3}{2}\frac{3}{2}}^{\frac{3}{2}}$ left out of \pounds_1 .

Ex. 4. When the income-tax is 7d in the f_a , a person has to pay f_a 03 less than when the tax was 11d in the f_a 1; find his income.

On the diminution of tax from 11d to 7d in the f_a 1, the man has

to pay 4d. or £ali or £al less on £1.

In every Lite less of income-tax the man has LI;

.....£60£63..........£60 × 63 = £3780. Ans.

Ex. 5. The rent of a man's house is £120 per annum. It is assessed to the rates at $\frac{d}{2}$ of this 1 the poor-rate is 7s. 6d in the £1 the paying rate is 1s. 9d, and the church rate $\frac{d}{2}$ d, how much does the pay altogether for his residence?

Assessed value = 3 of £120=£80.

Amount of rates on £1 is (7s, 6d. + 1s, 9d. + 4d.) = 9s. 7d.. rates on £80 is $9s. 7d. \times 80 = £38. 6s. 8d.$

Hence the annual cost of the house = £120 + £38. 6s. 8d. =£158. 6s. 8d. Ans.

Examples LXXXVIII.

 A man pays an income-tax of Rs.63, 14a, 51p. at the rate of 7p. in the rupee; find his income.

- How much will a poor-rate of 2s. 8d, in the £ produce in a parish in which the whole property is rated at £4736. 5s.?
- 3. A person after paying 7th in the rupee for income-tax has Rs.346. 14a. left. What was his gross income?
- 4. After paying an income-tax of 3d in the £, a person has a net income of £590. 10s. 6d; find his gross income.
- 5. Find a man's gross rental if after paying an income-tax of 8d in the £ on the whole, and 2s. 6d in the £ on two-thirds of his rental, he has a net income of £398. 16s. 6d.
- 6. After deducting 45 in the rapee for income-tax and 35 of the value of the whole estate for collecting expenses, the value of the remainder is Rs 11270; what is the value of the whole estate?
- 7. The net rental of an estate, after deducting 7d in the f for income tax and also of the remainder for cost of collecting, is £959. 3s. 8d.; find the gross rental.
- 8. A reduction in the income-tax diminishes a tax which is \$3,15 when the tax is 8 pies in the rupee by \$6.3. 12a; what is the diminished rate of tax in the rupee?
- 9. 1 hire a house at £90 a year, which is assessed in the rate-hook at \$\frac{1}{2}\$ to \$0\$ its rent: 1 a gree to pay the rates upon it, \$\vec{v}_{i}\$, 2 poor-rates of \$\vec{g}_{i}\$, i.e. \$\vec{c}_{i}\$ and 1s. \$2d\$ respectively in the £, a church rate of \$\vec{g}_{i}\$ in the £, and a paving rate of 1s. 7d. in the £: what is the whole annual cost of the house?
- 10. A man allows his agent § of one anna in the rupee on his gross income for the expense of collecting his rents. He spends § of his net income in assaring his own life, and this part of his income is in consequence excempt from income-tax. The income-tax being 8p. in the rupee, and his income-tax amounting to Kr.38p, 8a, find his gross mecome.
- 11. A man pays a house rate of is. 6d. per £ on his rental; a water-rate of is. per £; a poor-rate of is. 10½d. per £. If the rent and rates amount to £35. 6s. 3d., what is the rent?
- 12. An occupier pays house-rate of 3a, police-rate of 9b, water-rate of 2a bb and a lighting-rate of 1a 9b in the rupee. If the rent and rates amount to Rs.1440, what is the assessed annual value of the house?
- The income-tax having been raised to tod in the pound, a man has to pay £45. 10s. 6d more than when it was 7d in the pound. Find his income.
- 14. If a person's net income after paying an income-tax of 7d in the \mathcal{L} le \mathcal{L}_{20}^{-1} , 5x, find his net income after paying an incometax of 1x, 4d in the \mathcal{L}

312 Division into Parts and Shares.

Proceed as follows :--

Ex. I. A post has of its length in the hud, in water and to ft. above the water. Find its whole length.

Let unity or 1 represent the length of the post.

Then the part in the mud = $\frac{1}{4}$, Now, $\frac{1}{4} + \frac{1}{2} = \frac{7}{13}$.

Hence, by question, The of the post = 10 ft.

the length of the post=10 ft. $\times \frac{1}{6}$ = 24 ft Ans.

Ex. 2. One half of the trees in an orchard are apple trees, one-

Ex. 2. One-half of the trees in an orchard are apple trees, onefourth are pear trees, one-sixth plum trees, and there are 50 cherry trees; what number of trees does it contain?

Representing the number of trees in the orchard by the unit or 1, we have

= number of apple trees ;)

 $\frac{1}{2}$ = number of pear trees; $\frac{1}{2}$ = number of plum trees.

Hence, by question, $\frac{1}{1}g$ of the whole no. of trees = 50, the whole no. of trees = $50 \times 12 = 600$. Ans.

Ex. 3. After paying away one-half of a sum of money, and then § of what was left, Rs.5. 4a. remained: what was the sum?

Let I represent the sum of money.

Then 1 of the sum = 1; the first paid-up part;

... $1 - \frac{1}{2} = \frac{1}{2}$,...., remaining.....; Again $\frac{n}{2}$ of $\frac{1}{2} = \frac{n}{2}$, the second paid-up......

Again $\frac{1}{3}$ or $\frac{1}{2} = \frac{1}{10}$, the second paid-up.....; $\frac{1}{2} - \frac{1}{10} = \frac{1}{6}$,.....remaining....; Hence, by question, $\frac{1}{2}$ of the sum = Rs.5. 44.

, the whole sum = Rs.5. 4a. × 5 = Rs.26. 4a. Ans.

Ex. 4. A met two beggars, B and C; and having $\frac{3\frac{7}{4}}{4\frac{3}{2}}$ of $\frac{10\frac{5}{2}}{7\frac{1}{4}}$ of a moidore of 27s in his pocket, gave $\frac{3}{4}$ of it to B and $\frac{3}{4}$

of the remainder to C; what did each receive?

A had at first
$$\frac{49}{49}$$
 of $\frac{79}{13}$ of $\frac{77}{540}$ of 27s.
= $\frac{40 \times 7}{30 \times 11}$ of $\frac{75 \times 2}{7 \times 15}$ of $\frac{77 \times 27}{540}$ s. = $\frac{14}{3}$ s.

.. B received } of 1 of 3's. = 1s. = 6d.,

and A had afterwards left $(\frac{1}{3}s - \frac{1}{3})s = \frac{2}{3}s$. \therefore C received $\frac{3}{5}$ of $\frac{3}{3}s = \frac{2}{3}s = \frac{2}{3}s$. Ex. 5. A person left $\hat{\gamma}_R$ of his property to his elder son and $\hat{\gamma}_R$ of the remainder to his younger son and the rest to his widow. The elder son received £1029, 163, 4d. more than the younger; how much did the widow receive?

Let I represent the whole property.

Then the elder son received τ_{s}^{\prime} , and the part left is $(1 - 1_{s}^{\prime}) = \frac{1}{1_{s}^{\prime}}$. The younger son received τ_{s}^{\prime} of $1_{s}^{\prime} = \frac{1}{3} \tau_{s}^{\prime}$, and the part left is

 $\frac{11}{18} - \frac{77}{324} = \frac{5}{324}$ the widow's share is $\frac{1}{324}$ of the property.

The sons' shares differ by $\frac{7}{18} - \frac{77}{324} = \frac{49}{324}$ of the whole.

Hence, by question, $\frac{49}{324}$ of the whole estate = £1029. 16s. 4d. the whole estate = £1020, 16s. 4d. $\times \frac{3}{3}\frac{4}{3}$

the whole estate = £1029. 10s. $4d. \times 15^{\circ}$ = £21. os. $4d. \times 324 = £6809. 8s.$

: the widow's share = £6800, 8s. $\times \frac{321}{321} = £21$. os. $4d. \times 121$ = £2543. os. 4d. Ans.

Ex. 6. Gunpowder being composed of nitre 15 parts, charcoal 3 parts, and sulphur 2 parts; find how much of each is required for 18 maunds of powder.

The whole number of parts=(15+3+2)=20.

.. of every 20 parts, \frac{1}{20} or \frac{2}{3} is nitre, \frac{2}{20} is charcoal, \frac{2}{20} or \frac{1}{10} is sulphur.

Examples LXXXIX.

 After detaching 12 and 12 of a company of soldiers, the general had 1110 left; required his original force.

If a person lay out 5 of his income in board and lodging, 1 in clothes and save Rx.600 a year; what is his income?

 What is the capacity of a vessel, out of which when a third of it is empty, 35 gallons being drawn, there remains \(\frac{1}{2}\) of the whole content?

4. In an orchard, & are apple trees, & peach trees, & pear trees, and the remainder which is 38, cherry trees. How many trees are there in the orchard?

5. After taking out of a purse \(^2\) of its contents, \(^2\) of the remainder was found to be Rs.6. 11a. 8b.; what sum did it contain at first?

6. If ½0 of an estate be left to the elder and the remainder to the younger of two children, and the difference of their legacies be Rs.222 better abuse of the estate.

- 7. Of a field \(\frac{1}{3} \) is meadow, \(\frac{1}{6} \) is arable and the remainder is 1 ac. 3 ro. 26 po. ; find the quantities of meadow and arable land.
- A had at first £1. 8s., and B, when he had paid 2^{3¹/₄} of £1.
 11s. 6d. to A, found that he had remaining ¹/₄ of what A then had; what had R at first?

 A man pays away 1 of his money, then 1 of what remains, and then 1 of the second remainder; after which he has 7s. 6d. left; how much had he at first?

10. A post is divided into 4 parts; the first part is \$ of the whole length, the second part is \$ of the first, the third \$ of the second, and the fourth is 2 yds. r ft. 4 in.; find the length of the post.

11. Out of Rs.43 12a, \(\frac{1}{2}\) is paid to \(A\) and \(\frac{1}{2}\) to \(B\); after this \(\frac{1}{2}\)To f the remainder is paid to \(A\) and the rest to \(B\); find the sums

respectively received by A and B.

12. A gentleman left his eldest son \$ of his money, to the younger \$ of the remainder, and the rest to his wife; upon dividing the money, it was found that the eldest son had Rs.7500 more than the younger; how much was left to each ?

13. A and B have Rs.18 and Rs.12 respectively; and if A gives $B = \frac{24}{4}$ of the difference of $\frac{2A}{13}$ of their respective sums, and $\frac{1}{2}$ of A's present sum be added to $\frac{1}{4}$ of $\frac{1}{4}$ of B's, Cs money will be 1.9 of this sum; find 1

14 A person had a legacy left to him, which he thus divided amongst 3 charities. To one he gave \(\frac{\chi_0}{\chi_0} \) to the second \(\frac{\chi}{\chi} \) of the remainder, and to the third \(\frac{\chi}{\chi} \) of what now remained; \(\frac{\chi}{\chi} \) and he then had \(\frac{\chi_1}{\chi_0} \) to each charity.

15. What number is that of which the fourth, fifth and sixth parts together exceed the half of the number by 112?

16. A person making his will, gave to one child 15 of his estate, and the rest to another. When these legacies came to be paid, the one turned out to be £1200 more than the other; what did the testator did worth?

17. A, B and C rent a pasture for Rs.400. A puts in 8 cattle, B 9 and C 11; bow much should each pay for his share?

18. A person dies worth R.L.100000, and leaves § of his property to his wife, § to his son, and the rest to his daughter. The wife at her death leaves § of her legacy to the son, and the rest to the daughter; but the son adds his fortune to his sister's and gives her § of the whole. How much will the sister gain by this, and what fraction will her gain be of the whole?

313. Pipes and Cisterns.

If one or more pipes fill or empty a cistern in 8 min., they fill or empty ith of it per min.; and conversely, if they fill or empty that it per min, they fill or empty the whole in 8 min. Similarly,

if they fill or empty a cistern in $5\frac{1}{6}$ hours, they fill or empty $\frac{1}{5\frac{1}{6}}$ or $\frac{1}{17}$ of it in 1 hr.: and conversely, if they fill or empty $\frac{1}{7}$ of it per hour, they will fill or empty the cistern in $(1+\frac{1}{16})$ or $5\frac{1}{6}$ hrs.

Ex. 1. Two pipes can separately fill a cistern in 10 and 15 minutes. If both the pipes are opened, how soon will the cistern be filled?

The first pipe fills 10 of the cistern in 1 min.

., both the pipes fill $(\frac{1}{16} + \frac{1}{18})$ or $\frac{1}{6}$ of the cistern in 1 min. Hence they fill the cistern in $(1 + \frac{1}{16})$ min. = 6 min. Ans.

Ex. 2. Pipes A and B can fill a cistern in 3 min. and 5 min. respectively, and C can empty it in 7_c^1 min. In what time will the cistern be filled when A, B and C are all turned on t?

The first pipe fills in 1 min. 1 of the cistern :

.. second } ;

The third pipe empties in 1 min. (1 $\div 7\frac{1}{1}$) or $\frac{9}{15}$ of the cistern ;

.. with all open, $(\frac{1}{2} + \frac{1}{6} - \frac{7}{16})$ or $\frac{9}{2}$ of the cistern is filled in 1 min. Hence the cistern will be filled in $(1 + \frac{9}{6})$ min. $= 2\frac{1}{6}$ min. Ans.

Ex. 3. Two taps take 4 hours and 6 hours respectively to fill a cistern. When the waste pipe is left open along with the two taps, the cistern is filled in 24 hours. In what time does the waste pipe empty the cistern?

The first tap fills 1 of the cistern in t hour.

. the waste pipe empties $(\frac{1}{4} + \frac{1}{6} - \frac{1}{4} + \frac{1}{6} - \frac{1}{6})$ or $\frac{1}{6}$ of the cistern in $(1 + \frac{3}{8}) = 2\frac{3}{6}$ hrs. Ans. Ex. φ . A cistern which would be filled in 8 hours requires 2 hours more to be filled, owing to a leak in the bottom. If the

cistern is full, in what time will the leak empty it?

Had there been no leak, \(\frac{1}{2}\) of the cistern would have been filled in 1 hr.; but the leak allows only \(\frac{1}{2}\) to be filled in 1 hour.

.: (1-10) or 30 of the cistern is emptied by the leak in 1 hour.

Therefore the leak requires $(1+\frac{1}{4}s)$ or 40 hours to empty the cistern. Ans.

Examples XC.

- 1. Two taps, A and B, fill a cistern in so and 20 hours respectively. In what time will they fill it together?
- 2. A cistern is filled by two taps in 10 and 15 hours respectively, and is emptied by a tap, C, in 8 hours. If all the three taps are open, in what time will the cistern be filled?
- A cistern is fed by a spout which can fill it in 3 hrs. How long would it take to fill it, if the cistern has a leak which would empty, when full, in 17 hrs.?
 - 4. Two pipes together can fill a cistern in 8 min., and one of them alone in 24 min. How long would the other alone take?
- 5 A cistern has three pipes connected with it two to supply and one to draw off. The first alone can fill \(\frac{3}{2}\) of the cistern in 3 hours, and the second \(\frac{3}{2}\) in 4 hours; the third can empty \(\frac{3}{2}\) of the cistern in 5 hours. If all the pipes be opened together at once, when will the cistern be full?
- 6. A cistern is filled by two spouts in 20 and 24 minutes respectively, and emptied by a tap in 30 minutes; what portion of it will be filled in 15 minutes when they are all left open together?
- 7. A cistern has three pipes A, B and C; A and B can fill it in 3 and 4 hours respectively, and C can empty it in 1 hour; if these pipes be opened in order at 1, 2 and 3 o'clock, when will the cistern be empty?
- 8 A cistern is provided with three spouts A,B and C. A can fill it in 30 minutes, B in A0 and C can empty it in 2 hours. If A1, B3 and C6 be opened successively for a minute each, in what time will the cistern be filled; and how much of the content of the cistern will have passed out by C?
- 9. A cistern can be filled by three pipes; by the first in cohours, by the second in 9, and by the third in 8 hours. It is supplied by the first pipe till \$\dip \text{it is fall, then the second is also turned on till it becomes half full, and then all three hegin to run. How long would it take to fill the cistern?
- 10. A tank can be filled by one pipe in 6 min, and by a second in 5 min, there is also a tap by which the tank can be emptied. If the tank be empty at first, and the pipes and tap be all left open, the tank is filled in 3 min. If the pipes are then closed, in what time will the tank be emptied by the tap?
- 11. A cistem can be filled by two pipes, A, B in 4 and 5 min-respectively and empired by C in 144 seconds. B is opened 2 min after A, C is opened 1 min after B. The cistem contains 301 gallons just before C is opened. In what time will it be filled or empired after the opening of C and how many gallons will go out by C?
 - 12. Three taps, A, B and C can fill a cistern, A by itself in

24 min., B in 10 min., and C in 27 min. They are all turned on at once, but after $4\frac{1}{2}$ min. B and C are turned off. How much longer will A by itself take then to fill the cistern?

- 314. Time and Work. The following points (if remembered) will greatly help students in solving problems concerning Time and Work.
- (1) If 1 man can do a piece of work in a certain time, then in the same time 2 men will do twoice as much, 3 men thrice as much, and so on. Conversely, if 3 men can do a piece of work in a certain time, 1 man will do \(\frac{1}{2} \) of the work in the same time.
- (2) If one or more men can do a piece of work in 6 days, they can do \(\frac{1}{2} \) of the work in 1 day; so, if a piece of work can be done in 6\(\frac{1}{2} \) of the work in 1 day; and the work can be done in 1 day; and townersey; if \(\frac{1}{2} \) the dipter of work is done in 1 day; and the work can be done in 6 days; so, also if \(\frac{1}{2} \) its far bivec work can be done in 6 days, so, also if \(\frac{1}{2} \) its far bivec in (1 \leftarrow \frac{1}{2} \leftarrow \frac{1}{2} \) or \(\frac{1}{2} \) the days.
- (3) If 5 men can do a piece of work in 7 days, then they will do the of the work in one day; therefore 1 man will do

 √ 3 = π/2, of the work in 1 day, or the whole work in 35 or (5 × 7) days.
- (4) If 1 man can do a piece of work in 5 days, then he will do ½th of the work in t day; therefore 3 men will do ½ths of the work in I day, and therefore the whole work in (1+¾) or (5+3) days.
- (5) If 1 man can do ³/₃ of a piece of work in 7 days, he can do ⁸/₃ x ¹/₄ of it in 1 day, and therefore the whole work in 1 + (⁴/₃ x ¹/₄) days.
- (6) If A can do ½ of a work in I day, and B ¼ in I day, then A and B together will do (½+½) or ²√0 of the work in I day, and therefore both will finish the work in (I+²√0) or 2½ days.
- Ex. 1. A can do a piece of work in 5 days, B in 6 and C in 7; how much of it can they jointly do in 2 days, and how long will they take to do the whole work?
- A can do \(\frac{1}{2} \) of the work in 1 day; B can do \(\frac{1}{2} \) of the work in 1 day; C can do \(\frac{1}{2} \) of the work in 1 day.

 A, B and C can jointly do \(\frac{1}{2} + \frac{1}{4} + \frac{1}{2} \) or \(\frac{1}{2} \) of the work in 1 day.
 - Hence, in 2 days they will do $\frac{1}{2}\frac{\pi}{10} \times 2$ or $1\frac{\pi}{100}$ of the work. Ans. Also, they can jointly do the whole work in $(1+\frac{1}{2}\frac{\pi}{10})$ or $1\frac{\pi}{100}$ days.
- Ex. 2. If A and B together can perform a piece of work in 10 days, and A himself can do it in 18 days, what time will it take B to do it alone?

A and B can do the work in 10 days;

... they can do to the work in I day;

A can do the work in 18 days:
... he can do the work in one day;

.. B can do (1 - 1) or 2 of the work in I day;

... B can do $(\hat{\tau}_B - \hat{\tau}_B)$ or $\hat{\tau}_B$ of the work in 1 day; Hence B can do the whole work in $(1 + \hat{\tau}_B)$ or $22\frac{1}{2}$ days. Ans.

Ex. 3. A does 7_0 of a piece of work in 14 days; he then calls in B, and they finish the work in 2 days; how long would B take to do the whole work by himself?

A does in of the work in 14 days;

.. he does Tio or to of the work in I day;

.. in 2 days, A does an or to of the work.

But $(1 - \frac{\pi}{10})$ or $\frac{\pi}{10}$ of the work remains to be done;

∴ B does (†5 - 1/1) or 1 of the work in 2 days;
∴ B can do 1/1 of the work daily, and

.. B can do the whole work in $(1 \div \frac{1}{12})$ or 10 days. Ans.

 $Ex. \ \bot$ If A and B can do a piece of work in 18 days, A and C in 12 days, and B and C in 9 days, find the time in which A, B and C can together finish it, and also each working singly.

... 2 men like A+2 men like B+2 men like C can do $(\frac{1}{1}+\frac{1}{12}+\frac{1}{2})$ or $\frac{1}{2}$ of the work in I day;

... A, B and C can do & of the work in 1 day;

Hence they can jointly do the whole work in (1+1) or 8 days. Ans.

lence they can jointly do the whole work in $(1+\frac{1}{4})$ or $\frac{8}{2}$ days. Ans. Also A can do $(\frac{1}{4}-\frac{1}{4})$ or $\frac{8}{4}$ of the work in 1 day, and

the whole work in I day, and

the whole work in 24 days.

C...... $(\frac{1}{n} - \frac{1}{12})$ or $\frac{2}{n}$ of the work in I day, and

the whole work in 142 days. Ans.

Ex. 5. 5 men or 10 women or 15 boys can do a piece of work in 16 days. In how many days will 2 men, 3 women and 4 boys do it? Since 5 men can do the work in 16 days;

... I man will do the work in (16×5) days;

: I man in one day will do $\frac{1}{16 \times 5}$ of the work;

 \therefore 2 men in one day will do $\frac{2}{16 \times 5}$ or $\frac{1}{40}$ of the work;

Similarly, 3 women in one day will do Teo of the work;

Hence, they will take $(1 \div \frac{1}{2} \frac{1}{6} \frac{1}{6})$ or $\frac{480}{6} = 16\frac{1}{6} \frac{1}{6}$ days. Ans.

Ex. 6. A and B can do a piece of work in 10 days, B and C in 15 days, and A and C in 25 days; they all work at it together for 4 days; A then leaves, and B and C go on together for 5 days, and then B leaves; in how many days will C complete the work?

A and B can do $\frac{1}{4}v$ of the work daily; B and C $\frac{1}{4}v$ daily; $\frac{1}{4}c$ amen like A+2 men like B+2 men like C can together do $\frac{1}{4}v^2 + \frac{1}{4}v^2 + \frac{1}{4}v^2$ or $\frac{1}{4}v^2$ of the work daily, and $\frac{1}{4}v^2 + \frac{1}{4}v^2 + \frac{1}{4}v^2$ of the work daily. Hence in 4 days, they do $\frac{1}{4}v^2 + \frac{1}{4}v^2 + \frac{1}{4}v^2$ of the work daily.

... when A leaves, $(1-\frac{\pi}{2}\frac{1}{3})$ or $\frac{\pi}{2}\frac{1}{3}$ of the work remains to be done. Now, B and C together in 5 days do $(\frac{1}{2}\times 5)$ or $\frac{1}{3}$ of the work.

when B leaves, $(\frac{4}{5} - \frac{1}{4})$ or $\frac{1}{5}$ of the work remains to be done, and this work C finishes by himself.

Again, C in one day can do $(\frac{31}{100} - \frac{1}{10})$ or $\frac{1}{100}$ of the work.

Hence, C finishes the work in $(\frac{1}{2} + \frac{1}{2} + \frac{1}{2} + \frac{1}{2})$ or $\frac{1}{2} \times 300 = 76$ days. Ans. Ex. 7. If 10 excavators can dig 12 loads of earth in 16 hours,

whilst 12 others can dig 9 loads in 15 hours; find the time in which they will jointly dig 100 loads.

The first set of men can dig \(\frac{2}{3} \) or \(\frac{2}{3} \) load in 1 hour; the second

set 7% or \$ load in one hour.

., they can jointly dig (3+3) or 35 loads in t hour;

... they can dig I load in $(I + \frac{17}{20})$ or $\frac{10}{27}$ hour.

Hence they can dig 100 loads in $(\frac{20}{67} \times 100)$ or $74\frac{3}{27}$ hours. Ans.

Ex. & A can do a piece of work in 10 days, B in 9 days and C in 12 days. All begin together; but A leaves after 4 days and B 2 days before the work is done. How long did the work last?

A can do $\frac{1}{10}$ of the work in 1 day; $B \downarrow \inf 1$ day; and $C \downarrow 1 \inf 1$ day. A in 4 days does $\frac{1}{10}$ or $\frac{2}{3}$ of the work. Now, C worked 2 days more than B, and during that time did $\frac{2}{10}$ or $\frac{1}{3}$ of the work.

Therefore the work done by B and C together is $(1-\frac{\pi}{3}-\frac{1}{4})$ or $\frac{1}{3}\frac{\pi}{6}$ of the work. Now, B and C in 1 day can do $(\frac{\pi}{3}+\frac{1}{4})$ or $\frac{\pi}{3}\frac{\pi}{6}$ of the work; therefore they took $(\frac{1}{16}+\frac{\pi}{3})$ or $\frac{\pi}{3}\frac{\pi}{6}$ days $=2\frac{\pi}{3}$ days.

Hence the whole time occupied = $(2\frac{n}{33} + 2)$ or $4\frac{n}{35}$ days. Ans.

Ex. 9. If A can do as much work in 5 hours as B can do in

6 hours, or as C can do in 9 hours, how long will it take C to complete a piece of work, one-half of which has been done by A working 12 hours and B 24 hours?

Since 5 hrs. work of A = 9 hrs. work of C:

... I hr. of $A = \frac{9}{5}$ hrs. of C, or 12 hrs. of $A = \frac{9}{5} \times 12$ or $21\frac{3}{6}$ hrs. of C; Since 6 hrs. work of B = 9 hrs. work of C;

.. 24 hrs. of B=9×4 or 36 hrs. of C.

Hence 12 hrs. of A+24 hrs. of $B=(21\frac{2}{5}+36)$ or $57\frac{4}{5}$ hrs. of C. But 12 hrs. work of A+24 hrs. work of $B=\frac{1}{5}$ of the work;

., Ccan finish the remaining half in 57% hrs. Ans.

Ex. 10. A is thrice as good a workman as B; and together

Ex. 10. A is thrice as good a workman as B; and together they finish \(\frac{1}{2}\) of a work in 9 days. In how many days will it be done by each separately?

Since 3 days' work of B=1 day's work of A;

.. 9 days' work of B=3 days' work of A.

., 9 days' work of B+9 days' work of A=12 days' work of A. But 9 days' work of B+9 days' work of $A=\frac{\pi}{2}$ of the work;

... 12 days' work of $A = \frac{3}{2}$ of the work. i. e.

A can do ? of the work in 12 days.

Hence A does the whole work in $(12+\frac{3}{6})$ or 20 days, and therefore B does the whole work in 3×20 or 60 days.

Examples XCI.

 A alone can do a piece of work in 11 days, and B alone can do it in 17 days; find how long they would take to do it together.

 A, B and C can complete a piece of work in 10, 12 and 15 days respectively. How long would it take them if they work together?

 A can finish a piece of work in 2½ days and B in 3½ days: if they work together what part of the work will they finish in 1½ days?

4. A and B can do a piece of work in 12 days: when C joins them they can do it in 9 days; in what time can C do it working alone?

5. A man alone can do a piece of work in 10 days which, if his son helps him, he can do in 6 days; in what time would his son working alone do the work?

6, A can reap $\frac{4}{9}$ of a field in $2\frac{2}{9}$ days, and B can reap $\frac{5}{9}$ of it the field?

7. If A and B can do a piece of work in 24 days, A and C in

16 days, and B and C in 12 days; find the time in which A, B and C can together finish it

- 8. A and B can do a piece of work in 6 days which B and C can do in 4 days, and A and C in 3 days. Find the time in which each can separately do it.
- 9. A and B can do a piece of work in 8 days, A and C in 10 \S days, and B and C in 9 \S days; in how many days can A alone do it?
- 10. A, B and C can finish a piece of work in 12 hours, also A and B can do it in 16 hours, and A and C in 18 hours; what part of the whole work can B and C do in 91 hours?
 - part of the whole work can B and C do in 94 hours?

 11. A, B and C can do a piece of work together in 20 days, A alone can do it in 40 days, and B alone in 50 days. In what time
- can Calone do it?

 12. A performs ? of a piece of work in 13 days, and with the help of B finishes it in 6 days. In what time could each of them
- nelp of B noises it in a days. In what time could each of them do the piece of work separately?

 13. A can do $\frac{3}{2}$ of a piece of work in 4 hours, B can do $\frac{3}{4}$ of
- the remainder in 1 hour, and C can then finish it in 20 minutes; in what time can A, B and C together do it?

 14. A certain number of men mow 4 acres of grass in 3 hours,
- and a certain number of others mow 8 acres in 5 hours; how long will they be in mowing 11 acres, if all work together?

 15. A can mow 24 acres in 68 days, and B 24 acres in 54
- days; they mow together a field of to acres; how long will it take them to do it, and how many acres will each mow?
- 16. A and B can do a piece of work in 4 days, working 6 hours a day; B and C can do it in 4 days, working 5 hours a day: and A and C can do it in 4 days, working 4 hours a day. In how many days of 8 hours will each do it separately?
- 17. A can do a piece of work in 27 days, A and B can do it in 15 days; A works alone for 12 days, and A and C together for 5 days, and B finishes it in 7 days; find in what time B and C together could do it.
- 18. A can do a piece of work in 27 days and B in 15 days; A works at it alone for 12 days, B then works 5 days and afterwards C finishes it in 4 days; in what time could C have done the whole work?
- 19. A and B can do a piece of work, each, in 24 days; A and B work together for 6 days, when B goes away and C works with A for 3 days, then B rejoins them, and the work is finished in 2 days more. How long would it have taken A. B and C to do the piece of
- work, if they had all worked together?

 20. A can do a piece of work in 6 days and B in 9 days. They begin together. But 2 days before the completion of the work, A leaves off. In how many days is the work finished?

21. A is twice as good a workman as B; and together they finish a work in 8 days. In how many days can it be done by each separately?

22. 8 men or 12 women or 16 children can do a piece of work in 15 days. In how many days will 3 men, 4 women and 5 children do it?

23. A is thrice as good a workman as B. If the time taken by B to do a piece of work exceed that taken by A by 8 days, find in how many days each can do it.

24. A is twice as good a workman as B and thrice as good as C. Working together for 10 days they can finish a work. They all begin together. But after working for 3 days A leaves off. After 5 days more B also leaves off. In how many days more will C finish

the work?

25. A can do a piece of work in 10 days, B in 9 days and C in

24. All begin together; A leaves after 3% days, B leaves

25 days before the work is done. How long did the work last?

28. A man can do as much work in 3 days as a boy can do in. How long will a man take to finish a work, 1 of which has been done by a boy in 8 days?

27. If A in 2 days can do as much work as C in 3 days, and B is days as much as C in 4 days, what time will B require to execute a piece of work which A can accomplish in 6 weeks?

28. If A can do as much work in 5 hours as B can do in 6 hours, or as C can do in 9 hours, how long will it take A to complete a piece of work, one-half of which has been done by B working 12 hours, and C working 24 hours?

315. Equations. A statement of the equality of two arithmetical expressions is called an arithmetical equation.

Thus, 8=5+3 is an arithmetical equation, for it asserts that 8 is equal to the sum of 5 and 3. The numbers 8, 5 and 3 are called **terms** of the equation. If one of the terms be unknown, it can be easily found from the above statement.

316. Although equation is an instrument of great power in all mathematical calculations, yet it is surprising to see that in no text-book of Arithmetic the method of solution by equations has received due favour. The following simple results are very useful in solving equations.

(i) If equals be added to equals the sums are equal.

Thus, 15-3=12. ... 15=12+3, (adding 3 to each side of the equation).

(ii) If equals be taken from equals the remainders are equal. Thus, 75=12+3, ... 15-3=12, (taking 3 from each side of the equation). (iii) If equals be multiplied by equals the products are equal.

Thus, 15 = 12 + 3; $15 \times 4 = (12 + 3) \times 4$, (multiplying each side by 4).

(iv) If equals be divided by equals the quotients are equal.

Thus, 15-12+3; ... 15+3=(12+3)+3, (dividing each side by 3).

Hence from (i) and (ii) we see that any term of an equation may be transferred from one side of the equation to the other, if its sign

be changed, plus becoming minus and minus becoming plus.

317. In a problem, the number to be found is called the unnown quantify or unknown term, and the numbers given are called the known quantifies or known terms. To combine them and thus reduce their number, we transpose all the terms into which the unknown quantity enters to one side of the equation contained in the control of the con

Ex. 1. If to the sum of \{ and \} of a number 5 be added, the sum is 19; find the number.

 $(\frac{1}{n}+\frac{1}{n})$ of the number +5=19; \therefore \sqrt{n} of the number +5=19

Transposing the terms, we have

 $\frac{1}{12}$ of the number = 19 - 5 = 14; ... number = 14 × $\frac{1}{2}$ = 24. Ans.

Ex. 2. What is the number from which if you take away 15, the remainder is # of the original number?

The number - 15= 3 of the number.

Transposing the terms, we have the number - # of the number = 15;

., i of the number = 15; the number = 3 x 15 - 45. Ans.

£x. 3. A boy loses \(\frac{1}{2}\) of his money, and then gains 6β s.; he then loses \(\frac{1}{2}\) of what he has, and then gains 4β s.: he afterwards loses \(\frac{1}{2}\) of what he has, and then finds that he has 6n. 1β s. left. How much had be at first \(\frac{1}{2}\)

‡ of the money is lost; ∴ ^a/₄ of it remains; 6ρs. is then gained;
∴ money now remaining = ^a/₄ of original money +6ρs.; of this
½ is lost;

... \$ of (\frac{n}{2}) of original money +6\(\rho x\). remains : 4\(\rho x\). is then gained ;

... money now remaining = \frac{n}{2} of (\frac{n}{2}) of original money +6\(\rho x\).) +4\(\rho x\).

of this amount \$\frac{n}{2}\$ is lost

... $\frac{5}{5}$ of $\left[\frac{5}{3}\right]$ of $\left(\frac{5}{4}\right)$ of original money +6ps. +4ps. +4ps. +4ps.

= 10 of original money +5/s.;

.. 1% of original money +5/s. =6a. 1/s.;

.. 16 of original money=25ps. - 5ps. = 20ps.

;, original money = 20ps, $\times \frac{1}{4}s = 64ps$, = Re.1. Ans.

Ex. 4. From a tank \$ths full of water 12 gals, are drawn, and the tank is then found to be 10g gals, more than half full; find how many gals, it will hold.

After drawing 12 gals, the quantity of water remaining = \frac{1}{2} of tank - 12 gals, ; and it is then found that the tank is 10\frac{1}{2} gals. more than half full:

.. 4 of tank - 12 gals. = 1 of tank + 10 gals.

. t of tank - t of tank = 101 gals. + 12 gals. = 225 gals. ;

.. 16 of tank = 221 gals. ; .. tank holds 221 × 10 or 75 gals. Ans.

Examples XCII.

- 1. If to $\frac{\pi}{7}$ of a number 18 be added the sum is 42; find the number
- 2. If to the sum of $^9_{14}$ and 4_2 of a number 34 be added the sum is 128; find the number.
- 3. If from the sum of $\frac{\pi}{6}$ and $\frac{\pi}{10}$ of a number 41 be taken the remainder is 97; find the number.
- 4. What is the number to which if you add 60 the sum is 5 times the original number?
- 5. There is a number, to which 3 is added and χ_{ij}^{k} of the result taken; to this 5 is added and χ_{ij}^{k} of the result taken; then the result is $1\frac{1}{2}$; what is the number?
- 6. The sum of two numbers is 5760, and their difference is equal to one-third of the greater. What are the numbers?
- 7. The sum of four fractions is 2½%, and one common result is obtained by adding the fraction ½ to the first, subtracting ½ from the second, multiplying the third by ½ and dividing the fourth by ½. Find the four fractions.

- 9. A spends $\frac{7}{16}$ of his money and then earns Rs.5; he afterwards spends $\frac{1}{2}$ of what he then has, and has then Rs.10. 8a left; find how much he had at first.
- 10. Out of § of my income I pay to one person Rs.100 and to another Rs.150, and then find that I have Rs.50 less than \hat{r}_{s} of my income left; find my income.
- 11. Out of a cask two-thirds full of wine 8 gals. are drawn, and it is then found to be 2 gals. less than half-full; how many gals. is the cask able to hold?
- 12. An army in a defeat loses & is to number and 8000 prisoners; after being reinforced by 6000 men it again loses & of its number in retreat; and 36000 are then left, what was the original force?

318. Irregular Distributions.

Again means a second time. As much again means as much once and as much a second time, (i, e) twice as much. Half as much again means as much once and half as much a second time, $i, e, t \nmid i$ times as much.

e. 15 times as thuch.

Proceed as in the following Examples. $Ex. \ I$. Divide Rs.11875 among A, B and C so that as often as A gets Rs.4, B shall get Rs.3, and as often as B gets Rs.6, C shall get Rs.5.

As often as A gets Rs.4, B gets Rs.3; \therefore B's share = $\frac{1}{4}$ of A's.

As often as B gets R.6. C gets Rs.5: .. C's share=\$ of B's.

* C's share = f of f of A's = f of A's :

:. A's share $+B's+Cs=(1+\frac{a}{4}+\frac{a}{8})$ of $A's=2\frac{a}{8}$ times A's share;

Hence 2g times A's share = Rs. 11875;

.. A's share = Rs.11875 + 28 = Rs.5000.

... B^{0} s share= $\frac{3}{4}$ of Rs.5000 = Rs.3750.

and C's share= 5 of Rs. 5000 = Rs. 3125.

Otherwise thus: If A gets Rs.8, B gets Rs.6 and C gets Rs.5. Now, 8+6+5=19; and 11875+19=625.

.. A gets # of Rs 11875 = Rs.8 x 625 = Rs.5000; &c.

Ex. 2. Divide Rs.640 among A, B and C, so that A may have 3 times as much as B, and C_3 of what A and B together have.

A's share = 3 times B's share: C's share = $\frac{1}{2}(A's + B's)$.

A's share=3 times B's share; C's share= $\frac{1}{3}(A's+B's)$. .'. C's share= $\frac{1}{3}(3B's+B's)=\frac{4}{3}B's$.

.. Us share = 5 (3 D S + D S) = 5 D S.

.. A's share $+B^0s+C^*s=(3+1+\frac{1}{3})$ of $B^0s=5\frac{1}{3}$ of B^0s share. Hence $5\frac{1}{3}$ of B^0s share =Rs. 640; .. B^0s share =Rs.640+ $5\frac{1}{3}=Rs$.120.

.. A's share=Rs120×3=Rs.360 and Cs=\(\frac{1}{2}\times \times \ti

5 women and 8 boys, so that for every 3d. a man gets, a woman gets
2d., and a boy 1d. 6/2; find the share of each.

A woman's share=\(^2\) of a man's; a boy's share=\(^1\) of a man's;

A woman's share=\(\frac{2}{3}\) of a man's; a boy's share=\(\frac{1}{3}\) of a man's;
\(\ldots\) a man's share+a woman's+a boy's=\((1+\frac{2}{3}+\frac{1}{3}\)) of a man's;
\(\ldots\) 3 men's shares+5 women's+8 boys'=\((3+\frac{1}{3}+\frac{1}{3}\)+4\) of a man's

Hence 103 times a man's share = Rs. 155;

. a man's share= $Rs.155+10\frac{1}{3}=Rs.15$: a woman's share= $\frac{2}{3}$ of Rs.15=Rs.10, and a boy's share= $\frac{1}{2}$ of Rs.15=Rs.7. 8a.

Ex. 4. Divide Rr.8424 among A, B and C, so that A shall receive $\frac{1}{3}$ a much as B and C together, and $B \frac{1}{2}$ of what A and C together receive.

A's share= $\frac{4}{3}$ of (B's + C's), and B's share= $\frac{4}{3}$ of (A's + C's).

... A's share = $\frac{1}{4}B's + \frac{1}{4}Cs = \frac{4}{8}$ of $\frac{4}{8}$ of $(A's + C's) + \frac{4}{8}C's = \frac{18}{28}$ of

 $(A's+C's)+\frac{1}{2}C's=\frac{1}{2}A's+\frac{1}{2}C's+\frac{1}{4}C's=\frac{1}{2}A's+\frac{1}{2}C's$;

 $\therefore A's - \tfrac{1}{6}A's = \tfrac{4}{5}C's, \text{ or } \tfrac{8}{6}\tfrac{6}{5}A's = \tfrac{4}{5}C's \; ; \; \therefore A's = \tfrac{4}{5} \times \tfrac{4}{6}\tfrac{6}{5}C's = \tfrac{8}{6}\tfrac{6}{5}C's.$

 $\therefore B's = \frac{1}{5}A's + \frac{1}{5}C's = \frac{1}{5} \times \frac{5}{25}C's + \frac{1}{5}C's = \frac{3}{25}C's = \frac{5}{25}C's.$

.. A's share +B's +C's $=(\frac{1}{2}\frac{a}{b}+\frac{a}{5}\frac{a}{b}+1)$ of C's $=\frac{1}{2}\frac{1}{b}$ ' of C's share; hence $\frac{1}{b}$ 'e of C's share =Rs.8a24.

... C's share = $Rs.8424 \div \frac{117}{23} = Rs.2088$ A's share = $\frac{36}{2}$ of Rs.2088 = Rs.2592.

A's share = $\frac{45}{10}$ of Rs.2088 = Rs.2592. A and B's share = $\frac{50}{10}$ of Rs.2088 = Rs.3744

Examples XCIII.

2. Divide Rs.75. Sa. between A, B and C giving B half as much again as A less Ra.1, and C as much as A and B together.

3. Divide Rs.1400 among A, B and C in such a manner that as often as A gets Rs.5, B shall get Rs.4, and as often as B gets Rs.3, C shall get Rs.3

4. Divide Rs.352. 9a. among A, B and C, so that B may get twice, and C 3 times as much as A.

5. Divide Rs. 1800 among A, B and C, so that A may receive 3 times as much as B, and B and C together 3 as much as A.

6. Divide Rs.12540 among A, B and C, so that A shall receive a samuch as B and C together, and B & of what A and C together receive.

7. Divide Rs. 2000 among A, B and C, so that B's share may be $\frac{\pi}{2}$ of A's share, and C's share $\frac{\pi}{3}$ of B's.

8. Divide Rs.95. 10a. 8p. among 10 men, 6 women and 4 children, giving a woman 3 times as much as a child and a man twice as much as a woman.

 Divide £1650 among A, B, C and D, so that A may have half as much as D, B a third as much as C and C a fourth as much as D.

10. If \(\frac{a}{2} \) of \(A' \)'s money = \(\frac{a}{2} \) of \(B' \) s = \(\frac{a}{2} \) of \(C' \) s and \(A \), \(B \) and \(C' \) s money together amount to \(R \). \(8260 \); how much has each?

If \$\tilde{a}\$ of \$A'\$ s money=\$\frac{7}{8}\$ of \$B'\$ s=\$\tilde{8}\$ of \$C'\$ s=\$\tilde{0}\$ of \$D'\$ s and \$A, B\$,
 C and \$D\$ together have \$R\$.23076; determine how much money each has.

12. If \$\sigma_0\$ of A's money = \$\frac{9}{1}\$ of B's, and C's money = \$\frac{9}{3}\$ (\$\frac{9}{2}\$ of

318. Irregular Distributions.

Again means a second time. As much again means as much once and as much a second time, (i.e.) twice as much. Half as much again means as much once and half as much a second time, i.e. 1\frac{1}{2} times as much.

Proceed as in the following Examples.

Ex. 1. Divide Rs.11875 among A, B and C so that as often as A gets Rs.4, B shall get Rs.3, and as often as B gets Rs.6, C shall get Rs.5.

As often as A gets Rs.4, B gets Rs.3; \therefore B's share = $\frac{1}{4}$ of A's.

As often as B gets Rs.6, C gets Rs.5; C's share = \S of B's.

.. C's share = 1 of 1 of A's = 1 of A's;

... A's share + B's + C's = $(1 + \frac{3}{4} + \frac{5}{8})$ of A's = $2\frac{3}{8}$ times A's share;

Hence 28 times A's share = Rs. 11875;

.. A's share = Rs.11875 + 28 = Rs.5000.

.. B's share = $\frac{a}{4}$ of Rs.5000 = Rs.3750.

and C's share = 3 of Rs. 5000 = Rs. 3125.

Otherwise thus: If A gets Rs.8, B gets Rs.6 and C gets Rs.5. Now, 8+6+5=19; and 11875+19=625.

.. A gets A of Rs 11875 = Rs.8 × 625 = Rs.5000 : &c.

Ex. 2. Divide Rs.640 among A, B and C, so that A may have 3 times as much as B, and C \S of what A and B together have.

A's share = 3 times B's share : C's share = $\frac{1}{3}(A's + B's)$.

.. C's share= $\frac{1}{3}(3 B's+B's)=\frac{4}{3}B's$.

.. A's share $+B's + C's = (3+1+\frac{1}{3})$ of $B's = 5\frac{1}{3}$ of B's share. Hence $5\frac{1}{3}$ of B's share =Rs, 640; .. B's share =Rs, 640 $+5\frac{1}{2}=Rs$, 120.

:. A's share = $Rs.120 \times 3 = Rs.360$ and $Cs = \frac{4}{3} \times Rs.120 = Rs.160$.

Ex. 3 The sum of Rs. 155 is to be divided amongst 3 men, 5 women and 8 boys, so that for every 3a. a man gets, a woman gets

2a., and a boy 1a. 6p.; find the share of each.
A woman's share=\frac{2}{3} of a man's; a boy's share=\frac{1}{2} of a man's; a man's share+a woman's+a boy's=(1+\frac{2}{3}+\frac{1}{2}) of a man's;

.. a man's share+a woman's+a boys=(1+g+t) of a man's .. 3 men's shares+5 women's+8 boys'=(3+\frac{1}{3}^0+4) of a man's =10t times a man's share:

Hence $10\frac{1}{3}$ times a man's share=Rs. 155; ... a man's share=Rs.155+ $10\frac{1}{3}$ =Rs.15: a woman's share= $\frac{2}{3}$ of

Rs. 15=Rs.10, and a boy's share= $\frac{1}{2}$ of Rs.15=Rs.7, 8a.

Ex. 4. Divide Rs.8424 among A, B and C, so that A shall acceive $\frac{1}{2}$ as much as B and C together, and B $\frac{1}{2}$ of what A and C together receive.

A's share $= \frac{4}{9}$ of (B's + C's), and B's share $= \frac{4}{5}$ of (A's + C's). A's share $= \frac{4}{9}B's + \frac{4}{9}C's = \frac{4}{9}$ of $\frac{4}{5}$ of $(A's + C's) + \frac{4}{9}C's = \frac{14}{2}$ of

 $(A's + C's) + \frac{1}{6}C's = \frac{1}{2}\frac{6}{6}A's + \frac{1}{2}\frac{6}{6}C's + \frac{1}{6}A's + \frac{1}{6}C's + \frac$

.. A's - 48 A's - 8C's, or \$8 A's - 8C's; .. A's - 6 × 48 C's.
.. B's - 4 A's + 4 C's - 4 × 64 C's + 4 C's - 44 C's - 44 C's.

... A's share+B's+C's=(\frac{2}{3}\frac{6}{3}\frac{1}{

.. C's share = Rs.8424+ \(^1_2\) = Rs.2088, .. A's share = \(^1_4\) of Rs.2088 = \(^1_{8.82592}\) and B's share = \(^1_6\) of Rs.2088 = \(^1_{8.3744}\).

Ans

Examples XCIII.

1. Divide Rs.6488. 7a. 10p. amongst three persons A, B and C, so that $\frac{1}{1^3}$ of A's share $=\frac{1}{2^3\pi}$ of B's $=\frac{1}{2^3\pi}$ of Cs.

 Divide Rs.75. 8a. between A, B and C giving B half as much again as A less Re.1, and C as much as A and B together.

3. Divide Rs.1400 among A, B and C in such a manner that as often as A gets Rs.5, B shall get Rs.4, and as often as B gets Rs.3, C shall get Rs.2.

4. Divide Rs.352. 9a. among A, B and C, so that B may get twice, and C 3 times as much as A.

5. Divide Rs. 1800 among A, B and C, so that A may receive 3 times as much as B, and B and C together \(\frac{1}{2} \) as much as A.

6. Divide Rs.12540 among A, B and C, so that A shall receive

→ as much as B and C together, and B + of what A and C together receive.

7. Divide Rs.2000 among A, B and C, so that B's share may be 3 of A's share, and C's share 3 of B's.

8. Divide Rs.95. Iox. Ep. among 10 men, 6 women and 4 children, giving a woman 3 times as much as a child and a man twice as much as a woman.

9. Divide £1650 among A, B, C and D, so that A may have half as much as B, B a third as much as C and C a fourth as much as D.

10. If $\frac{9}{4}$ of A's money $=\frac{2}{3}$ of B's $=\frac{8}{3}$ of C's and A, B and C's money together amount to Rs. 8260; how much has each?

11. If \S of A's money $= \S$ of B's $= \S$ of C's $= \S$ of D's and A, B, C and D together have Rs.23078; determine how much money on b has.

12. If To of A's money = 1 of B's, and C's money = 1 (for

A's+2 of B's), and C's money -A's money =Rs.667; find how much A, B and C each has

319. Travelling round a Circle.

When two or more persons start simultaneously from the same place to travel round a circular course either in the same direction or in opposite directions, (i) they should first be together again at an interval of time which is the L. C. M. of the times during which one of the walkers gains one complete round over each of the others, for each pair will be together after this time; (ii) they should first be together at the starting post again at an interval of time which is the L. C. M. of the times during which each makes one complete round, for in that interval each shall make an integral number of rounds.

Ex. 1. A can go round a circular course in 18 min., B can go round it in 24 min., and C in 32 min. If they start simultaneously from the same point and travel in the same direction, in what time will they come together again?

Take I for the length of the course ;

then A travels γ_s , B_{2^1} and C_{3^2} of the course in 1 min.; A_{2^1} , A_{3^2} , A_{3^2} , A_{3^2} , A_{3^2} , or A_{3^2} , of the course in 1 min.

A gains on B one complete round in $(1 + \frac{1}{12})$ or 72 min. Hence A and B will be together after 72 min.

Again, A gains on $C(\frac{1}{1N} - \frac{1}{2N})$ or $\frac{1}{2N-2}$ of the course in 1 min. A gains on C one complete round in $(1 + \frac{1}{2N})$ or $\frac{1}{2N} = 1$ min. Hence A and C will be together after $\frac{1}{2N} = 1$ min.

Therefore A, B and C will be together after a time which is the L. C. M. of 72 and 258 is 288.

A, B and C are first together after 288 min. Ans.

Ex. 2. In the above question if A and B travel in the same direction but C in the opposite direction, when will they meet again?

As in the above question.

A and B will be together at the end of 72 min. :

Again, A and C together pass over (18 + 15) or 28 of the course in 1 min.

... they come together at the end of $(1 + \frac{25}{25})$ or $\frac{25}{25}$ min. Now, the L. C. M. of 72 and $\frac{25}{25}$ is 288; ... A, B and C will be together at the end of 288 min. Ans.

Ex. 3. A, B and C start from the same point and travel in the same direction round an island 6 miles in circumference, A at the rate of 3, B at the rate of $2\frac{1}{2}$ and C at the rate of $1\frac{1}{4}$ miles an hour. In how many hours will they come together again?

A gains on $B(3-2\frac{1}{2})$ or $\frac{1}{2}$ mile in 1 hour, ... he gains 6 miles or a complete round in $(6+\frac{1}{2})$ or 12 hours,

Hence A and B are together at the end of every 12 hours.

Again, A gains on $C(3-1\frac{1}{4})$ or $1\frac{\pi}{4}$ miles in 1 hour, ... he gains 5 miles or a complete round in $(6\div 1\frac{\pi}{4})$ or $\frac{\pi}{4}$ hours.

Hence, A and C are together at the end of every $\frac{7}{4}$ hours. Therefore A, B and C are together at the end of any number of hours which is a common multiple of 12 and $\frac{7}{4}$;

but the L. C. M. of 12 and 4 is 24:

hence A, B and C are first together at the end of 24 hrs. Ans. Ex. φ . In the above question, when will they be together

again at the starting point? Here, A takes \S or 2 hrs., B $(6+2\frac{1}{2})$ or $\frac{3}{2}$ hrs. and C $(6+1\frac{3}{4})$ or $\frac{3}{4}$ hrs. to make one round.

Now, the L. C. M. of 2, 13 and 24 is 24;

... they will be together again at the starting point 24 hrs. after.

Examples XCIV.

- Two persons A and B start from the same point to walk round a circular course in the same direction. A takes 9 min. and B takes 24 min. to complete one round; in what time will they be together again?
- 2. Three persons, A, B and C can respectively go round a circular path in 8, 18 and 30 min. If they start simultaneously from the same point and travel in the same direction, when will they meet again?
- 3. A, B and C start from the same point and travel in the same direction round an island 73 miles in circumference. A at the rate of 10, B at the rate of 14 and C at the rate of 16 miles a day; in how many days will they come together again?
- 4. There is a park 12 miles in circumference. Five persons star from the same point to travel round it in the same direction at the respective rates of 3, 33, 4, 44 and 5 miles per hour. When will they be together again at the starting point?
- 5. A, B and C start from the same point and travel in the same direction round an island 36 miles in circumference, A at the rate of 3 miles, B at the rate of $3\frac{1}{2}$ miles and C at the rate of 4 miles an hour; when will they be together again?
- at C start from the same place to walk round it, at the rates of $4, 4\frac{1}{2}$ and $5\frac{1}{2}$ miles per hour respectively. In how many hours will they come together again, supposing them to travel in the same direction?
- 7. In the above question, if A and B travel in the same direction and C in the opposite direction, when will they come together again for the first time?
- An island is 120 miles in circumference. Three persons A, B and C start from the same place to walk round at the respective

rates of 10, 12 and 15 miles per hour. When will they next meet, supposing (i) that they walk in the same direction, (ii) that A walks in one direction and B and C in opposite directions?

320. Chain Rule. If we wish to express one quantity A in terms of another quantity R, and have data from which we can form the following series of relations, wir.,

$$a A = m M$$
. (1)
 $b M = n N$. (2)
 $c N = b P$. (3)
 $d P = q Q$. (4)
 $e Q = r R$. (5)

which may be as numerous as we choose, then will $A = \frac{mnpqr}{abcds}R.$

Hence we see that the quantity required is found by dividing the product of the numbers on the right-hand side of these equations by the numbers on the left-hand side.

Ex. r. If 3 lbs. of tea be worth 4 lbs. of coffee, and 6 lbs. of coffee be worth 20 lbs. of sugar, and 15 lbs of sugar be worth 24 lbs. of rice; how many lbs. of rice are equal to 18 lbs. of tea?

321. In the preceding equations the quantity on the righthand site find one equation is of the same kind as that on the lefthand side of the next equation, and thus the Chain of quantities from one kind to another is unbroken. And not only must they be of the same kind but also of the same denomination; for if not, the one or more missing links must be supplied.

Ex. 2. If 3 lbs. of rice be worth 5 oz. of tea, and 4 lbs. of tea be worth 9 lbs. of coffee, how many lbs. of coffee are worth 48 lbs. of rice?

Here, we must either supply the missing link 16 oz. tea=1 lh. tea, or we must express 5 oz. tea as $\frac{e}{10}$ lh. tea; so that we have

bb. reqd. coffee =48 fbs. rice,
3 fbs. rice =5
$$\alpha$$
 ten,
16 oz. tea =1 fb. ten,
4 fbs. tea =9 fbs. coffee;
 $\frac{48 \times 5 \times 1 \times 9}{3 \times 16 \times 4}$ fbs. rea =9 fbs. coffee;
 $\frac{48 \times 5 \times 1 \times 9}{3 \times 16 \times 4}$ fbs. rea =9 fbs. coffee;
 $\frac{48 \times 5 \times 1 \times 9}{3 \times 16 \times 4}$ fbs. rea =9 fbs. coffee;
 $\frac{48 \times 5 \times 1 \times 9}{3 \times 16 \times 4}$ fbs. rea =9 fbs. coffee;
 $\frac{48 \times 5 \times 1 \times 9}{3 \times 16 \times 4}$ fbs. rea =9 fbs. coffee;

$$= \frac{48 \times 5 \times 9}{16 \times 3 \times 4} = \frac{11\frac{1}{4}}{16 \times 3 \times 4}$$

322. It is unnecessary to name the quantity on the left-hand side of any equation; for it must be the same as the quantity on the right-hand side of the preceding equation.

Ex. 3. If $\frac{1}{3}$ of a sheep be worth \mathcal{L}_3^0 , and $\frac{3}{7}$ of a sheep be worth $\frac{1}{14}$ of an ox, what must be given for 100 oxen?

$$\int_{\mathbb{R}} s. \text{ reqd.} = 100 \text{ oxen,} \\
\gamma_1 = \frac{3}{7} \text{ sheep,} \\
\frac{1}{8} = \frac{100 \times 3}{11 \times 1} \times \frac{3}{11} = \frac{100 \times 3 \times 2 \times 14 \times 5}{7 \times 3} = \frac{2000}{11 \times 1}$$

$$\therefore \int_{\mathbb{R}} s. \text{ reqd.} = \frac{100 \times \frac{3}{11} \times \frac{3}{11}}{11 \times 11} = \frac{100 \times 3 \times 2 \times 14 \times 5}{7 \times 3} = \frac{2000}{11 \times 11}$$

Ex. 4. If 1 lb. of standard gold, of which 11 parts out of 12 are fine gold, be worth £46. 14s. 6d., find the value of 595 gold rupees of Bombay, each weighing 7 dwts. 10½ grs. of which 187 parts are fine gold and 13 alloy.

£46. 14s. $6d = £46^{20} = £18^{0.0}$; ... 40 Bs. standard = £1869; 7 dwts. 101 grs. = 77_0^4 dwts. $\approx 12^4$ dwts.; 16 Bombay rupees = 119 dwts.;

187+13=200; 187 parts out of 200 are fine; hence

$$40 = £1869$$
;
 \therefore £s. reqd. = $\frac{595 \times 119 \times 187 \times 12 \times 1869}{16 \times 20 \times 12 \times 200 \times 11 \times 40} = £878_{812000}^{40145}$

Examples XCV.

- When 25 yards of muslin are equal to 16 yds. of calico, 21 yds. of calico to 13 yds. of flannel, 40 yds. of flannel to 27 yds. of linen, 58½ yds. of linen to 28 yds. of silk, 47 yds. of silk to 35 yds. of velvet; find how many yards of velvet are equal in value to 60 yds. of muslin
- If 16 mangoes be equal in price to 25 apples, and 18 oranges equal to 12 mangoes, and 20 lemons equal to 27 oranges, and lemons cost 9x. a dozen, what is the cost of 15 apples?
- 3. If 12 of A count for 13 of B, 6 of B for 18 of C, and 13 of C for 2 of D; how many of A count for 100 of D?
- 4. If £3=20 thalers; 25 thalers=93 francs; 27 francs=5 scudi; and 62 scudi=135 gulden; how many gulden=£1?
- 5. If 16 darics make 17 guineas, 19 guineas make 24 pistoles-31 pistoles make 38 sequins; how many sequins are there in 1581 darics?
- 6. If 72 carlini be worth 25 shillings, 4 shillings worth 5 francs and 8 scudi worth 45 francs, how many carlini are equal to 100 scudi?

7. If 35 metres=39 yards, and 17 metres=9 toises, and 5

plethera = 124 toises, how many yards are there in 1575 plethera? 8. If 6 horses cost as much as 24 cows, 10 cows as much as 8 buffaloes, 4 buffaloes as much as 15 asses, 8 asses as much as

32 sheep, and if the price of 9 sheep be Rs. 25, find the cost of 8 horses.

 If 1 of a sheep be worth £3, and 3 of a sheep worth √3 of

an ox; how much must be given for 300 oxen?

10. If 40 lbs. of standard gold, of which 11 parts out of 12

are fine, be coined into 1869 sovereigns; how many grains of pure gold are there in I sovereign?

11. If 1 lb. of standard gold, of which 11 parts out of 12 are fine, be worth £46. 14s. 6d., find the value of 550 Madras gold rupees, each weighing 7 dwts. 12 grs., of which 916 parts out of 1000 are fine.

12. If 1 lb. of standard silver, of which 37 parts out of 40 are fine, be worth 66x, find the value of an Arcot Rupee, weighing 7 dwts. 9 grs., of which 941 parts ont of 1000 are fine.

Examples worked out.

Ex. 1. What least number must be added to $8\frac{1}{9}$, that the result being divided by $1\frac{2}{9}$, the quotient shall be an integer?

 $8\frac{1}{9} + 1\frac{2}{9} = \frac{7}{9} + \frac{5}{9} = \frac{7}{9} \times \frac{9}{9} = \frac{7}{19} = 4\frac{19}{19}$.

Now, the least number that should be added to $4\frac{1}{13}$ to make it an integer is $\frac{1}{12}$, for $\frac{1}{13} + \frac{1}{12}$, = 1.

Then the question reduces to "What number divided by 18 will

give r_{1}^{2} as quotient?"

Hence the required number = $\frac{1}{16} \times \frac{1}{3} = \frac{2}{16} \times \frac{3}{3} = \frac{2}{16}$. Ans.

Ex. 2. Find two least integers such that \S of the first shall be equal to \S of the second.

If $\frac{1}{6}$ of 1st number be = 1, then also $\frac{1}{6}$ of 2nd number = 1.

.. ist number = $(1 + \frac{6}{6}) = \frac{6}{3}$, and 2nd number = $(1 + \frac{2}{3}) = \frac{9}{4}$. Now to transform these fractions to least integers, multiply each of them by the L. C. M. of their denominators, and divide the number than found by their 0 - 0.

of them by the L. C. M. of their denominators, and divide the numbers thus found by their C. C. M.

The L. C. M. of 5 and 7 is 35; ∴ from 1st we have %×35=42, and from 2nd %×35 ≈ 40. Now the C. C. M. of 42 and 40 is 2.

Hence the numbers are 42 and 42, or 21 and 20. Ans.

Ex. 3. By selling an article for £12. 7s. 6d., I cleared \$ of what it cost me; what was the original cost?

Taking 1 for the original cost, the gain is $\frac{1}{3},$ and the selling price (1+ $\frac{4}{3}$) or $\frac{9}{3}.$

.. of the original cost = £12. 7s. 6d.;

: the original cost = f_{12} , 7s, 6d. + $\frac{6}{9}$ = f_{12} , 7s, 6d. × $\frac{6}{9}$ = f_{13} , 7s, 6d. × 5 = f_{13} , 6d. Ans.

Ex. 4. By selling 15 seers of tea at Rs.5. 4a. per seer, a grocer clears \(\frac{1}{2} \) of his outlay. He then raises the price to Rs.6 per seer and sells 50 seers more. What does he gain on the whole outlay for 65 seers?

Taking I for the original cost, the selling price is $(1+\frac{1}{2})$ or $\frac{\pi}{4}$.

... the original cost=Rs.5, 4a.+ 0=Rs.4, 10a. 8p.

.. in the 1st case gain per seer=Rs.5, 4a - Rs.4, 10a, 8p = 9a, 4p, in the 2nd case ... = Rs.6 - Rs.4, 10a, 8p = Re.1, 5a, 4p.

Now, gain on 15 seers=9a. 4p. × 15 =Rs. 8. 12a.

and gain on 50 seers = Re.1. 5a. 4p. $\times 50 = Rs.66$. 10a. 8p. \therefore his whole gain = Rs.75. 6a. 8p.

... his whole gain =Rs.75. 6a. 8φ. Ans. Ex. 5. Find the least number of sovereigns that contains an

exact number of 20-franc pieces of 15s. $11\frac{1}{4}d$, each. Here, 15s. $11\frac{1}{4}d = 191\frac{1}{4}d = \frac{7}{2}\frac{4}{2}d$, and a sovereign = 240d.

Here, 15s. 114d = 1914d = 240d, and a sovereign = 240d. $\frac{18}{3}d \times no.$ of 20-franc pieces = 240d × no. of sovereigns;

, no. of 20-franc pieces=240 × $\frac{1}{10.5}$ × no. of sovereigns

Hence the least no. of sovereigns that will make an exact number of 20-franc pieces is 51. Ans.

Ex. 6. A man bought 4 sorts of rice at an average price of Rs.6 a maund. If the prices increase by a common difference of 5a. per maund, find the cost of each sort per maund.

maund, find the cost of each sort per maund. The price of 4 sorts at Rs.6 per maund = $Rs.6 \times 4 = Rs.24$.

Each maund of second sort cost 5a more than a md. of 1st sort,
third 10a.
fourth 15a.

these 3 maunds cost Re.1. 14a. more

Now, leaving out this sum, the cost of 4 maunds is Rs.24 - Re.1 14a or Rs.22.2a; the cost of 1 md. = Rs.22.2a + 4 = Rs.5. 8a 6 ϕ . Hence the cost of 1 md. of 1st sort = Rs.5. 8a .6 ϕ .

Ex. 7. A and B undertake to do a piece of work for Rs.12. 8a., and do the work alone in 20 days and B in 15 days. They work together for 3 days, and then with the assistance of C finish it in 5 days wore. How should the sum be divided?

Here, A and B each worked for (5+3) or 8 days, and C for 5 days. As A can do $\frac{1}{35}$ of the work in 1 day, he did $\frac{1}{35}$ or $\frac{3}{5}$ of the work in 8 days. ... B ... $\frac{1}{7}$... he did $\frac{2}{75}$...

 \therefore A and B did in 8 days $(\frac{a}{5} + \frac{a}{15})$ or $\frac{14}{15}$ of the work.

Hence the work done by C in 5 days = $(1 - \frac{14}{15})$ or $\frac{1}{15}$ of the work. \therefore A received $\frac{2}{5}$ of Rs.12, 8a = Rs.5.

$$B ...$$

Ex. & A man's income from Government Securities is § of what he receives from his landed property. An income-tax of 5φ. in the rupee is charged on the first and of 4φ. in the rupee on the second, and he has to pay altogether Rs.31 as income-tax. Find his

income-tax on Ist= (4×4) or 16p, and on second= $(3 \times 5)=15p$, and 16p + 15p = 21p = 2p = 2p.

and $16p + 15p = 31p = Re_1 \frac{8}{12}$. • he has to pay $Re_1 \frac{3}{12}$ as tax on every Rs.7 of income. • $Rs.7 \times \frac{3}{12}$.

Ex. 9. A can do as much work in one day as B can do in 2 days, or as C can do in 3 days or as D can do in 4 days. They together finish a piece of work in 8 days. How many days would each take to do it single?

Suppose A's one day's work to be I, then B's one day's work is $\frac{1}{2}$, C's $\frac{1}{2}$ and D's $\frac{1}{2}$.

.. A, B, C and D's one day's work

 $=(1+\frac{1}{2}+\frac{1}{3}+\frac{1}{4})$ or $\frac{24}{2}$ times A's work per day;

.. A, B, C and D's 8 days' work=8 x 25 or 50 times A's work per day.

But A, B, C and D's 8 day's work = whole work;
... 50 times A's work per day = whole work;

or A's work per day = $\frac{1}{26}$ of the whole work.

Hence A can do the whole work in (1+-2) or 162 days.

Therefore B's time = $(2 \times 16\frac{3}{3})$ or $33\frac{3}{3}$ days; C's time = $(3 \times 16\frac{3}{3})$ or 50 days, and D's time = $(4 \times 16\frac{3}{3})$ or $60\frac{3}{3}$ days.

Examples XCVI.

- Determine the least number which must be added to 3½ that when the result is divided by ½, the quotient shall be an integer.
- What least number must be subtracted from 83, that when the difference is divided by 4, the quotient shall be an integer?
- If a pound weight of standard gold is worth £61, 185, 9d., and the least integral number of pounds of gold that can be coined into an integral number of sovereigns.

- If the rupee is worth 1s. 9d. and the mohur 3os., find the least number of pounds which can be paid exactly in rupees or mohurs.
- By seiling an article for Rs.460, 1 cleared a of the prime cost. Find the cost price.
- By selling a horse for Rs.2520, a man lost 4 of what it cost him. What did it cost him?
- 7. Find the least number of sovereigns that contains an exact number of thalers and of dollars; 48 thalers being worth f. 32, and 8 dollars f. 132.
- 8. A has twice as much money as B. They play together, and at the end of the first game B wins from A one-third of A's money; what fraction of the sum which B now has must A win back in the second game that they may have exactly equal sums?
- How many maunds of rice at Re4 per maund must a corn-merchant nits with 1 maund of rice at Rs.5 per maund, that by selling the mixed rice at Rs.4 82. per maund, he may gain the of his outlay?
- 10. Find the least number that must be added to 75\frac{1}{2}, that the sum being severally divided by $\frac{2}{4}$, $\frac{2}{12}$, $\frac{2}{3}$ or $\frac{2}{16}$, the quotient in each case shall be an integer.
- 11. A and B undertake to do a piece of work for Rs.7. 8a.
 A can do it alone in 8 days and B in 6 days. With the assistance of C it is finished in 3 days. How should the money be divided?
- 12. A and B engage to do a piece of work for Rt. 40. A can do it alone in 16 days and B can do it in 12 days. After working together for 4 days, A leaves off, when C, who can alone finish the work in 8 days, Johns How should the sum be distributed after the work is completed?
- 13. A man derives his income from three sources. His income from Government Securities is 9 d his income from trade, and his landed property yields an income equal to ½ of the sum of both. The rate of tax on income from trade is 6, per rupee, on Securities 5, per rupee, and on landed property 4, per rupee. If his total income-tax amounts to R2-266, find this gross income.
- 14. By selling tea at Rs.2. toa. 8p. per 1b., a grocer clears $\frac{1}{2}$ of hot outlay; he then raises the price to Rs.3. What does he clear on every Rs.200 of his outlay by this price?
- 15. A tradesman bays 5 mds. 24 sr. of goods for Re150 intending to gain ⁸/₂ of his outray by the sale; but Re10. 8a. worth at this calculation being damaged, at what price shall he sell the remainder per maund, to gain as much upon the whole outlay as he intended?
 - A can do as much work in I day as B in 3 days, C in

5 and D in 7 days. They together complete a piece of work in 8 days. In how many days will each do it singly?

17. A cloth-merchant bought a bale of cloth containing 150 pieces each, of cloths 2½, 3, 3½, 4 and 4½ yds. in length for $R_L 6 > 0.6$. If the prices increase by a common difference of SL, at what price per piece must be self them that he may gain RS, 100 by the transaction?

18. By selling a horse for $R_L 3 < 1.5$ [15st $\frac{3}{L}$, of the prime cost.

What would have been my gain had I sold it for Rs. 380?

19. A and B can finish a piece of work in $1\frac{1}{2}$ days, A and C and a days and B and C in 3 days. If Rs.6 be paid for the piece of work, what are a day's wages of each workman?

20. An elastic ball after striking the ground rises to \$\phi\$ of the height from which it fell. After striking the ground the third time it rises \$\frac{1}{2}\$ inches: from what height did it fall at first?

Miscellaneous Examples III.

- Divide the sum of 10 and \(\frac{1}{2}\), by their difference, and also the
 difference by their sum; and find the sum and difference of the two
 quotients.
- Add together 13, 21, and 31; multiply this sum by the
 product of these fractions; subtract from the result the difference of
 21 and 11; and divide the remainder by the sum of 51 and 11 of 31.
 - 3. Simplify $\frac{3}{4}$ of $\frac{43}{44}$, $\frac{105}{44}$, $\frac{4}{45}$, $\frac{4}{3}$,
- 4. Divide Rs. 19000 among A, B, C and D, so that B may receive \$\frac{1}{2}\$ of A, C \$\frac{1}{2}\$ of B and D \$\frac{1}{2}\$ of C.
- If ^a/₀ of ^A/₀ of A's money = ¹/₀ of ¹/₀ of B's and the difference of their moneys be R₂201, find A's and B's money.
- 6. If 3 men and 2 boys can do a piece of work in 15 days, and 2 men and 3 boys can do the same in 18 days, in what time will a man and a boy jointly do the work?
- 7. In an orchard, \(\frac{1}{3}\) of the trees are apple trees, \(\frac{1}{3}\) pear trees, \(\frac{1}{3}\) cherry trees, \(\frac{1}{3}\) filbert trees, and there are 12 walnut trees; what is the number of each sort?
- 8. If A can do half a piece of work in 3 hours, which is twice as much as B can do, and A, B and C can together do the whole in $2\frac{1}{2}$ hours; shew that C can do in 5 hours as much as B can do in 9 hours.
- 9. A 38-gallon cask of wine cost a wine-merchant Rs.250; but he lost 8 gallons of it by leakage; how must be sell the remainder per gallon to gain \(\frac{1}{2}\)th of the prime cost?
 - 10. A man owns \sqrt{h} of an estate. He sells $\frac{h}{h}$ of his share and then finds that his remaining share is worth Rs.525. Toa. What is the value of the whole property?

11. A can do a piece of work in 8 days, B in 12 days and C in 5 days. They all work together for 3 days at the same piece of work. In what time will B finish the remaining work?

 A grocer mixes 5 maunds of rice at Rs.4 per md. with 3½ mds. at Rs.4. 8a. per md. At how much per maund must be sell

the nixed rice that he may gain $\frac{1}{2}$ of his outlay?

13. If A takes 8 days to complete a piece of work, B takes 9 days to do $\frac{1}{2}$ of the same, and if B takes 10 days to complete a piece of work, C takes 8 days to do $\frac{1}{2}$ of the same. In what time will B and C toxether finish a work which A ladne can do in 2s days?

Reduce \(\frac{1}{2}\) of Rs.3, 12a.+\(\frac{1}{2}\) of Rs.7, 6a. -\(\frac{1}{10}\) of Rs.8, 4a. 6p. to the fraction of Rs.20, 10a.

15. Reduce $\frac{1}{12}$ of £7. 6s. $8d + \frac{1}{12}$ of £9. 13s. $4d - \frac{1}{13}$ of £10. 3s. 4d to the fraction of £25. 10s.

16. If 2 men and I boy do a piece of work in 5 days, I man and 2 women do it in 6 days and I woman and 2 boys do the same in 8 days, in what time will a man, a woman and a boy do it jointly?

17. Of the population of a certain town 1 can read, 1 can write, 2 can read and write and the remaining 130 can neither read, nor write. Find the total population of the town.

18. Simplify-

$$(a)\ \, \tfrac{\frac{\sqrt{6}6}{4}+\frac{\sqrt{1}6}{10}}{\frac{\sqrt{1}6}{4}-\frac{3}{10}} \ \, \text{of}\ \, \frac{8}{9\frac{1}{6}}+\frac{\frac{2}{8}+\frac{1}{6}}{\frac{2}{6}-\frac{1}{6}} \ \, \text{of}\ \, \frac{13}{14}\times \frac{\frac{1}{16}+\frac{3}{6}}{\frac{2}{3}-\frac{3}{4}} \ \, \text{of}\ \, \frac{2}{3}\bigg(\frac{3}{4}+\frac{1}{5}\bigg)\ \, .$$

(b)
$$\frac{9\frac{1}{8}}{11\frac{1}{8}}$$
 of $\frac{Rs}{Rs}$ 3. $12a$. + $\frac{7\frac{1}{8}}{11\frac{3}{8}}$ of $\frac{£2.6s}{£3.9s}$.

19. The adult population of a country is 22815210; the adult females are $\frac{\pi}{4\pi}$ of the whole population, and the adult males are $\frac{\pi}{4}$ of the adult females; find the whole population.

20. The wages of A and B together for 22 $\frac{1}{2}$ days amount to the same sum as the wages of A alone for 3δ , days. For how many days will this sum pay the wages of B alone δ .

21. A farmer paid a corn-rent of 5 qrs. of wheat and 3 qrs. of barley, Winchester measure. What was the value of his rent when wheat was at 6ox and barley 54x per quarter, Imperial measure, it being assumed that 32 Imperial gallons are equivalent to 33 Winchester gallons?

22. A man's debts amount to ½ of his property, but before paying them he loses ½ of his property; afterwards he recovers a portion equal to ½ of what he has left, and then loses ¼ of what he has got. Can he pay his debts? What part of his property remains over?

23. A man can do 4 times a certain work in 9 hours, a woman 3 times the work in 10 hours, and a child twice the work in 11 hours;

if a man, a woman and a child work together, in what time can they do 7 times the work?

24. Five brothers join in paying a sum of money; the eldest pays a third of it, and the others pay the remainder in equal shares, and thereby each of them pays Ax.S40 less than the eldest brother. What is the sum of money?

25. If 9 men or 16 women can do a piece of work in 144 days, in what time would 7 men and 9 women do it, working together?

26. Out of a cistern, which is \$rds full, 20 gallons are drawn, the cistern is then found to be \$ths full How much will the cistern hold?

27. The product of three numbers is 340; the first is $7\frac{4}{5}$, the second is less than the first by $1\sqrt{n}$. Find the third number.

28. A owned $\frac{4}{5}$ of a mine and sold $\frac{3}{5}$ of his share to B, who sold $\frac{1}{2}$ of his share to D; D's share was worth B 20565. What was the worth of B's remaining share, and what the worth of the whole mine?

 There are two fractions whose sum is 112, and whose difference is 71/8; find the fractions, and the quotient of the greater by the less.

by the less.

30. If a turkey cost \mathcal{L}_1^4 and a goose \mathcal{L}_1^4 , how many turkeys and geese, an equal number of each, can be bought for \mathcal{L}_{14} , 4s.?

31. A boy, in flying his kite, lost \$ of the string; he then added 65 ft., and then found that it was \$ of the original length. What was the length at first?

32. If $2\frac{1}{3}$ of $(A + \frac{3}{4})$ of $A = \frac{1}{3}$ of $(B - \frac{1}{3})$, find the value of A in terms of B.

33. A man bequeathed √s of his estate to one son, √s of the remainder to another son, and the balance to his widow. The sons' shares differ by Rs.1320; find the widow's share.

34. A man gives away in charity $\frac{1}{8}$ of his income, and pays $\frac{1}{10}$ of it in rates and taxes; with these deductions he has Ks.4736. 8n. 8p. left. What is his gross income?

35. Find the whole annual cost of a house, of which the rent is Rs_360 ; the poor-rate beint 2a. 8b in the rupee, the gas-rate $\frac{3}{4}$ of the poor-rate, and the paving-rate $\frac{3}{4}$ of the gas-rate.

38. What sum must be added to or subtracted from £12. 7s. $6d_{r}$, so that £5. 3s. 4d shall be the same fraction of the sum or difference that £3. 6s. 8d is of £8. 6s. 8d.

87. Divide Rs.4200 among A, B, C and D, so that A may get wice as much as B, A and C may get thrice as much as B and A, and D may get four times as much as B and C.

38. The sum of \$\frac{2}{5}\$ and \$\frac{1}{5}\$ of a man's debts amounts to \$Rs.198.

7a. 4p. and his assets are Rs.45. 1a. 8p.; how much in the rupee will his creditors lose?

39. One-third of A's money is equal to ½ of C's and ½ of C's is equal to ⅔ of B's; B gives to A ½ of his money and to C'↓ of the remainder, and has 2s. 6d. left. What amount had each at first?

40. Express $\frac{a}{3}$ of $\frac{a}{4}$ of f t. 10s. $+\frac{a}{4}$ of $\frac{a}{3}$ of 5s. 4d $-8\frac{1}{2}$ of $\frac{1}{4\frac{1}{4}}$ of 5s. $\frac{3}{3}$ d. as the fraction of 2s. $\frac{1}{4}$ d.

41. Find the value of

$$\frac{1}{4}$$
 of $\left(\frac{4\frac{7}{11}}{7\frac{3}{11}} + \frac{6\frac{6}{12}}{7\frac{3}{11}}\right) \times \frac{3\frac{2}{12} - 3\frac{3}{12}}{3\frac{3}{12} + 2\frac{3}{12}}$ of Rs. 184. 11a. 5p.

42. What sum must be added to or subtracted from Rs. 8. 12a-6b, so that the sum or difference shall be the same fraction of Rs. 20 toa, that Rs.7. 6a.6b, is of Rs.18.81.

43. A can do in 6 days as much work as C can do in 4 days, and B in 10 days as much as C in 8 days; what time would B require to finish a piece of work which A can do in 12 weeks?

44 When rice is at 12 sr. per rupee, the expenses of a family amount to Rs.140; but they amount to Rs.134 only, when the price falls to 16 sr. per rupee. What will the expenses be, when ice is at 18 sr. per rupee?

45. A can do in 2 days as much work as B in 3 days, and B in 3 days as much work as C in 4 days; what time will C require to finish a piece of work which A can do in 9 days?

48. A can by himself perform a certain quantity of work in $5 \times B$ twice as much in 7 days, and C four times as much in 11 days; in what time can A, B and C together perform three times the original work?

47. A was owner of $\frac{4}{1}$, of a privateer, and sold $\frac{4}{1}$ of $\frac{2}{3}$ of his share for £12 $\frac{4}{3}$; what was the value of $\frac{11}{58}$ of $\frac{1}{12}$ of the vessel at the same rate?

48. How much ore must be raised, that on losing $\frac{1}{16}$ in roasting, and $\frac{1}{2}$ of the residue in smelting, there may result 506 tons of pure metal?

49. Simplify-

$$\frac{\frac{1}{2} + \frac{1}{1} - \frac{1}{12}}{\frac{1}{2} - \frac{1}{2} + \frac{1}{12}} \text{ of } \frac{\frac{1}{2} - (\frac{1}{4} + \frac{1}{12})}{\frac{1}{2} - (\frac{1}{4} - \frac{1}{12})} + \frac{\frac{1}{2} \times \frac{1}{2} - \frac{1}{12}}{\frac{1}{2} \times (\frac{1}{4} - \frac{1}{12})} \text{ of } \frac{\frac{1}{2} - \frac{1}{4} \times \frac{1}{12}}{(\frac{1}{2} - \frac{1}{4}) \times \frac{1}{4}}.$$

50. A is 1½ times as good a working person as B, and twice as good as C. They all three can do a piece of work together in 6 days. They begin together, but after working for a days A goes away, After 2 days more B goes away, and C then completes the work alone. In how many days from the commencement is the whole work finished?

What is the sum of money?

if a man, a woman and a child work together, in what time can they do 7 times the work?

- 24. Five brothers join in paying a sum of money; the eldest pays a third of it, and the others pay the remainder in equal shares, and thereby each of them pays Ax. Sao less than the eldest brother.
- 25. If 9 men or 16 women can do a piece of work in 144 days, in what time would 7 men and 9 women do 1t, working together?
- 26. Out of a cistern, which is $\frac{1}{2}$ rds full, 20 gallons are drawn, the cistern is then found to be $\frac{3}{2}$ ths full How much will the cistern hold?
- 27. The product of three numbers is 340; the first is $7\frac{4}{51}$, the second is less than the first by $1\frac{4}{51}$. Find the third number.
- 28. A owned # of a mine and sold # of his share to R, who sold # of his share to C, who sold # of his share to D; D's share was worth Rs 20565. What was the worth of B's remaining share, and what the worth of the whole mine?
 - 29. There are two fractions whose sum is $\frac{1}{1}\frac{1}{4}\frac{3}{6}$, and whose difference is $\frac{1}{18}$; find the fractions, and the quotient of the greater by the less.
 - by the less.

 30. If a turkey cost \mathcal{L}_{2}^{k} and a goose \mathcal{L}_{10}^{k} , how many turkeys and geese, an equal number of each, can be bought for \mathcal{L}_{14} . 4s.?
 - 31. A boy, in flying his kite, lost \$ of the string; he then added 65 ft., and then found that it was \$ of the original length.
 - What was the length at first?

 32. If $2\frac{1}{3}$ of $(A+\frac{3}{7})$ of $A=\frac{1}{3}$ of $(B-\frac{1}{3})$, find the value of A in terms of B.
 - 33. A man bequeathed $f_{\overline{q}}$ of his estate to one son, $f_{\overline{q}}$ of the remainder to another son, and the balance to his widow. The sons' shares differ by $Rx. r_{3}20$; find the widow's share.
 - 34. A man gives away in charity $\frac{1}{8}$ of his income, and pays $\frac{1}{10}$ of it in rates and taxes; with these deductions he has Rs.4736. 8a.
 - 86. left. What is his gross income?

 85. Find the whole annual cost of a house, of which the rent is Rs 360; the poor rate being 20. 86, in the ruppe, the gas-rate \(\frac{3}{2}\) of
 - the poor-rate, and the paving rate $\frac{1}{2}$ of the gas-rate.

 36. What sum must be added to or subtracted from £12. 75. 6d., so that £5. 35. 4d. shall be the same fraction of the sum or difference
 - that £3. 6s. 8d. is of £8. 6s. 8d. ?

 37. Divide R. 4.200 among A, B, C and D, so that A may get twice as much as B, A and C may get thrice as much as B and A, and D may get four times as much as B and C.
 - 38. The sum of 3 and 1 of a man's debts amounts to As.198.

7a. 4p. and his assets are Rs.45. 1a. 8p.; how much in the rupee will his creditors lose?

39. One-third of A^*s money is equal to $\frac{1}{2}$ of C^*s and $\frac{1}{2}$ of C^*s is equal to $\frac{3}{2}$ of B^*s ; B gives to A $\frac{3}{2}$ of his money and to C $\frac{1}{2}$ of the remainder, and has 2s of A left. What amount had each at first 2s

40. Express $\frac{2}{3}$ of $\frac{1}{16}$, of £1. 10s. $+\frac{1}{4}$ of $\frac{2}{3}$ of $\frac{1}{5}$ s, $4d - 8\frac{1}{2}$ of $\frac{1}{4\frac{1}{4}}$ of 5s, $3\frac{3}{2}d$, as the fraction of 2s, $1\frac{1}{2}d$.

41. Find the value of

In the value of
$$\frac{1}{4}$$
 of $\left(\frac{4\frac{7}{9}}{750}\right) \times \frac{3\frac{2}{8} - 3\frac{1}{10}}{3\frac{3}{2} + 2\frac{1}{10}}$ of Rs. 184. 11a. 5p.

4. √2τ / 32+25

42. What sum must be added to or subtracted from Rs. 8. 12a-5β, so that the sum or difference shall be the same fraction of Rs. 20
10a, that Rs.7, 6a. 6β, is of Rs.18. 3a, 3β,?

43. A can do in 6 days as much work as C can do in 4 days, and B in 10 days as much as C in 8 days; what time would B require to finish a piece of work which A can do in 12 weeks?

44 When rice is at 12 sr. per rupee, the expenses of a family amount to R.140; but they amount to R.134 only, when the price falls to 16 sr. per rupee. What will the expenses be, when rice is at 18 sr. per rupee?

45. A can do in 2 days as much work as B in 3 days, and B days as much work as C in 4 days; what time will C require to finish a piece of work which A can do in 9 days?

48. A can by himself perform a certain quantity of work in 5 days, B twice as much in 7 days, and C four times as much in r1 days; in what time can A, B and C together perform three times the original work?

47. A was owner of $\frac{7}{12}$, of a privateer, and sold $\frac{7}{12}$ of $\frac{2}{3}$ of his share for £(12 $\frac{4}{3}$); what was the value of $\frac{11}{5\frac{3}{3}}$ of $\frac{7}{12}$ of the vessel at the same rate?

48. How much ore must be raised, that on losing \$\frac{1}{46}\$ in roasting, and \$\frac{1}{2}\$ of the residue in smelting, there may result 506 tons of pure metal?

Simplify—

$$\frac{\frac{1}{2} + \frac{1}{1} - \frac{1}{12}}{\frac{1}{2} - \frac{1}{2} + \frac{1}{12}} \text{ of } \frac{\frac{1}{2} - (\frac{1}{4} + \frac{1}{16})}{\frac{1}{2} - (\frac{1}{4} - \frac{1}{16})} + \frac{\frac{1}{2} \times \frac{1}{4} - \frac{1}{12}}{\frac{1}{2} \times (\frac{1}{4} - \frac{1}{12})} \text{ of } \frac{\frac{1}{2} - \frac{1}{4} \times \frac{1}{12}}{(\frac{1}{2} - \frac{1}{4}) \times \frac{1}{4}}.$$

50. A is 15 times as good a working person as B, and twice as good as C. They all three can do a piece of work together in 6 days. They begin together, but after working for 2 days A goes away. After 2 days more B goes away, and C then completes the work alone. In how many days from the commencement is the whole work finished?

- 51. A and B are engaged to do a piece of work, which can be done by each in 15 and 20 days respectively. If A leaves off 3 days before the completion of the work, how should a sum of Re.12. &a. be distributed among them?
- 82. A and B undertake to do a piece of work in 15 days for R5.22. 8a. After working for 12 days they call C to their help, and finish it in time. A could have done the work alone in 25 days. If they give C R5.2. 4a., how many days would B take to finish the work?
- 53. A man is thrice as good a workman as a boy. If the time taken by a boy to do a piece of work exceed that taken by a man by 4½ days, find the time in which a man can do it.
- 54. A and B can do a piece of work in 6 days, B and C in 7 days, and A, B and C can do it in 4 days. How long will A and C take to do it?
- 55. There is a leak in the bottom of a cistern. When the cistern was in thorough repair it could be filled in $\frac{q}{2}$ of an hour. Innow takes 10 min. longer. If the cistern were full, how long would it be in leaking itself to become empty τ
- 56. Io men can do a piece of work in 30 days. After working for lodays, a certain number of men are allowed to leave off, and then the work is finished in 43\frac{1}{3}\tag{days} from the commencement. How many men are allowed to leave off?
- 57. The work which can be done by a certain number of men in 40 days, can be done by 15 men more in 40 days. Find the number of men required to do the work in 60 days.
- 58. There are two numbers of which the difference is 91. A third number is contained in them 13 and 20 times respectively. Find the numbers.
- 59. The number 483 divided by another gives 4 for the quotient and 7 for the remainder; find what number, when multiplied by the remainder, will give that divisor.
- 60. A boy was told to divide one-half of a certain number by 7, and the other half by 9, and then to add the two quotients. To save trouble he divided the number by 8, and his result was 6 wrong. What was the number?
- 61. At 3 o'clock I had completed 3 of my journey, and at 5 o'clock 3 of the same; when did I start and arrive?
- 62. 40 men can do a piece of work in a certain number of days; if only 30 men be employed it requires 6 days more. Find the time in which 60 men can do it.
- 63. 20 men do a piece of work in 24 days. After working for 6 days, an additional number of men is taken for assistance, and the work is finished in 21 days from the beginning. Required the additional number of men.

84. There are 4 casks of different sizes. The 1st is filled with water, the rest are empty. The 2nd casks is filled from the 1st and 4ths of the original water in the 2st remains. The third is then filled from the 2nd, and 4th of the cast remains. The third is then filled from the 2nd, and 4th of the 2nd the 2nd and 2nd and 1st the water in the 3rd is then yet and 4nd and 510 and

CHAPTER VI.

The Theory of Decimals.

323. In the Notation of Integers, it has been seen that the foures in the unite' place alone retain their absolate values, whilst the local values of figures in other situations increase tenfold for every figure we advance towards the left hand from that place. Therefore, in begin the strength of the subject of the strength of the subject of their subject to the subject of their subject subject

Hence we are enabled to represent integers and fractions by one uniform system of notation, by merely marking the place of units; and whilst Integers are expressed by figures in the units' place and in places to the left of it, Fractions will be represented by figures situated in places, on the right of the units, called the places of tenths, humardisk, flowsmalths, for.

334. In this manner originates the system of Declinalls, being merely an extension of the Notation of Integers; and though there are decimals of all denominations as Declinal Integers, yet from the circumstance of the system representing only tenth, hundredth, thousandth, Cr., part of the unit, all Practions belonging to it are the control of the co

Whence, Decimals may be defined to be Fractions whose deminators are 10, 100, 1000, &c., these denominators not being written as in Vulgar Fractions, but expressed by the position of dot or point, called the decimal point.

I. NOTATION AND NUMERATION OF DECIMALS.

325. If we suppose the digit I to occupy the units' place, the following scheme will point out the denominations of the figures to

the left and right of it, and it may be extended so as to include both integers and fractions of all local values whatever.

A mixed quantity, formed of integers and fractions is separated into its integral and fractional portions by means of the Decimal Point placed on the right of the units' place towards the top, (to distinguish it from the sign of Multiplication), which dispenses with the description of the local denominations, given above.

Thus, in 54321'2345, the figures 54321 on the left of the point denote so many integers, and the figures 2345 on the right of it, so many fractions, namely, 2 tenths, 3 hundredths, 4 thousandths, 5 tenthousandths, and so on.

328. A number thus expressed, composed of units and accimal parts of unity, or of decimal parts of unity only, is called a decimal number, or simply a decimal. The part to the left of the point is called the integral, and to the right the decimal part of the given number.

Thus, 452 3678 is a decimal; 452 is the integral part and 3678 the decimal part.

327. From what has been said above, it appears that the expressing and reading of Dezimals will evidently be conducted upon the respective principles of the Notation and Numeration of integers : also, insamuch as Tategers does assemblages of two or more units, Dezimals will represent assemblages of two or more tenth, hundredth, &c., pairs of a unit. Thus, to express.

 45 units 3 tenths 2 hundredths 6 thousandths 8 ten-thousandths we write 45'3268.

(2) 45 units 2 hundredths 8 ten-thousandths we write 45 0208.

(3) 2 hundredths 8 ten-thousandths we write 0°0208 or simply °0208.
328. In reading a decimal, we read off the decimal part as an integer annexing the denomination of its last figure on the right hand. Thus,

(1) 45'3268 is read 45 and 3268 ten thousandths.

- (2) 3'141596 is read 3 and 141596 millionths.
- (3) 00047 is read 47 hundred-thousandths.
- 329 In practice, however, we do not annex the decimal denomination, but saying (decimal) point read off the figures of the decimal separately in order. Thus,
- (1) 15:3268 is read as point 3, 2, 6, 8,
- (2) 3'141596 is read 3, point 1, 4, 1, 5, 9, 6.
- (3) '00047 is read point 0, 0, 0, 4, 7.

II. RELATION OF DECIMALS TO VULGAR FRACTIONS.

330. From the statements made in the preceding Articles, it solvious that every magnitude made of one or more decimals is equivalent to, and may be expressed by, one or more vulgar fractions baving 10, 00, 1000. &c, for their denominators; and that all mixed quantities expressed decimally may be represented by means of whole numbers and vulgar fractions of similar denominators.

Thus, 24'387=24+ 10+ 100 + 1000; '045= 10+ 100+ 1000.

331. To convert a decimal into an equivalent vulgar fraction.

RULE. Write down the given number for the numerator (on:itting the decimal point), and for the denominator write: followed by as many ciphers as there are figures in the decimal part.

Ex. 1. $327 = \frac{837}{1000}$; for $327 = \frac{8}{10} + \frac{8}{100} + \frac{8}{1000} = \frac{837}{1000}$.

Ex. 3. $0.0459 = \frac{450}{10000}$; for $0.0459 = \frac{6}{10} + \frac{4}{100} + \frac{4}{10000} + \frac{8}{10000} = \frac{450}{10000}$.

Ex. 3. $13.816 = \frac{13.816}{10.00}$; for $13.816 = 13 + \frac{6}{10} + \frac{1}{10.0} + \frac{1}{10.00}$ = $13.\frac{6.16}{10.00} = \frac{13.00}{10.00}$.

In these instances, we see that the reduction to a common denoninator, so tedious in vulgar fractions, is entirely dispensed with, and the immediate comparison of fractional quantities is one of the great advantages of the system.

332. Conversely, every vulgar fraction having 10, 100, 1000, &c., for its denominator, may be immediately represented by an equivalent decimal.

RULE. Write down the numerator and by beginning at the figure on the right hand, mark off by the decimal point as many figures as there are ciphers in the denominator. If the number of figures in the numberator be less than the number of ciphers in the denominator, prefix in the numerator the necessary number of ciphers.

Ex. 1. $\frac{16945}{1000} = 15^{\circ}243$; for there are 3 o's in the denominator.

Ex. 2. $\frac{6245}{10006}$ = '5243; for there are 4 o's in the denominator.

Ex. 3. 100000 = '00243; for there are 5 o's in the denominator.

Examples XCVII.

- 1. Express as decimals :--
- (r) Four-tenths : eighteen hundredths : six-thousandths.
- (2) Three and seven-tenths; one and fifty-four hundredths.
- (3) Twenty-four and seventy-nine thousandths; one millionth.
- (4) Five-tenths, seven hundredths and nine thousandths.
- (5) Eight ten-thousandths; seventy millionths; five ten-millionths.
- (6) Three hundred and fifteen, eight thousandths and fifty millionths.
 - 2. Express the following decimals in words :-
- (1) '5; '35; '326; '1; '01; '0001; 5'37; '0025.
- (2) '43268 : '003405 ; '0000456 ; 98'7654321 ; '100001.
- Transform the following decimals into vulgar fractions: (1) 7; 71; 751; 1461; 103; 10037; 100057; 10000457.
- (2) 3.7; 52.10; 475.913; 276.00483; 1475.2045700. 4. Convert the following decimals into equivalent vulgar
- fractions in their lowest terms :--
- (1) '51'251'75: '6251'187512'56; '4321'006251'222464.
- (2) 4'375; '8125; 47'256; 4'3125; 13'00085; '0006875.
- (1) 1015625 : 1'075 : 3'01875 : 7'0046875 : 13'0005850375.
- 5. Express as mixed numbers with the fractional parts in their lowest terms :-
- (I) 5'2:6'024:41'015:72'75:9'4158:307'251:8'9125.
- (2) 376:275: 070:00004: 7321:0505: 23:067138671875.
- 6. Express the following as decimals :-
- (I) An : An : 48 : 48 : 48 : 484 : 484 : 488 : 4
- (2) ration : ration : ration : randonn : randonn : 4074.
- (3) The ; which ; resident ; then with ; resident ; then the ; then the state of th (4) 16 tenths; 75 hundredths; 31 thousandths; 4 ten-thousandths;
- 275 ten-thousandths; 79 millionths; 1001 ten-millionths; 79 hundred-millionths; two hundred and sixty-one hundredthousandths; 328 billionths.

333. Ciphers annexed to the right hand of a decimal fraction have no effect upon its value.

Thus, $37 = \frac{1}{100}$; $370 = \frac{1}{100} = \frac{1}{100}$; $3700 = \frac{1}{10000} = \frac{1}{100}$, and so on; as appears also from the consideration, that there are no thousandths, &c., in addition to the tenths and hundredths expressed by '37.

834. Hence an integer or a whole number can be expressed as a decimal by writing ciphers in the decimal part.

Thus, $317 \cdot 000 = 317 + \frac{6}{15} + \frac{1}{100} + \frac{1}{1000} = 317 + 0 + 0 + 0 = 317$;

Again, 31.72=31 + 1/2 + 1/2 = 31 + 1/2 : and

 $31.720 = 31 + \frac{7}{10} + \frac{2}{100} + \frac{2}{1000} = 31 + \frac{2}{100}$; ... 31.72 = 31.720.

335. Every cipher affixed to the left hand of a decimal fraction after the point diminishes its value tenfold.

Thus, '43= 148; '043= 1488; '0043= 14889; &c.;

where each fraction is a tenth part of that which immediately precedes it; and indeed this is evident from the circumstance of every figure being reduced one denomination lower by means of each cipher.

336. Hence, Multipliration and Division of a decimal by 10, 100, 1000, &c., are immediately effected, by shifting the decimal point one, two, three, &c., places towards the right and left respectively, adding ciphers, if necessary.

Ex. 1. 23'45 × 10 ≈ 23.45; for 23'45 × 10 ≈ 23'45 × 10 ≈ 23'45 × 10 ≈ 23'45 × 10 ≈ 23'45 × 10 ≈ 23'45 × 10000 × 10000 × 10000 × 10000 × 10000 × 10000 × 10000 × 10000 × 10000

= 2345 × 100 = 234500. Ex. 3. 23'45 + 10 = 2'345; for 23'45 + 10 = 3'45' × 7, = 3'45' = 2'345.

 $Ex. \ j. \ 23'45+10=2'345; \ tor \ 23'45+10='100' \times 1_0 = 1000 = 2'345.$ $Ex. \ j. \ 23'45+10000='002345; \ for \ 23'45+10000='\frac{2166}{100} \times \frac{1}{100} \times \fr$

Examples XCVIII.

- 1. Multiply :-
- (1) '8 separately by 10, 100, 1000, 100000, 10000000.
- (2) '0053 separately by 100, 10000, 1000000, 100000000.
- (4) 8 003056 separately by 100, 10000, 10000000.
- (1) '71 separately by 10, 100, 10000, 1000000.
- (2) 73'58 separately by 1000, 10000, 1000000, 10000000.
- (3) '007 separately by 100, 1000, 100000, a million.
- 337. The operations of Addition, Subtraction, Multiplication, and Division of decimals are performed in the same way as in the case of whole numbers. Hence it is an advantage to use decimals

III. ADDITION OF DECIMALS.

338. Rule. Place the numbers so that all the decimal points may be in the same vertical line, to insure the combination of those

in preference to vulgar fractions.

of the same denominations; and add them together as in integers, taking care to place the decimal point in the sum, immediately under those of the numbers proposed.

Ex. Add together 25.61, 4.805, 2006, 653.27, 23,

25'61 For 25'61 + 4'805 + '0096 + 653'27 + 23 4'805 _ 2561 , 4805 , 96 _ 65327 . _ -

053'27 256100 ± 48050 ± 96 ± 6532700 ± 230000

23' 10000 = 79 6 6 9 4 6 = 706 6 9 4 6.

339. Hence, decimals are said to be reduced to a common denominator, when ciphers are supplied so that there is the same num ber of decimal places in each.

Examples XCIX.

- 1. Add together :--
- (1) '295, 3'086, 12'87, '0051, 729'54, 7'419, 3'0256. (2) 3608'26, 560 826, 36'0826, 3'60826, '360826, '22314.
- (2) 3008-26, 300 820, 30-0826, 3-00826, 300826
 - (3) 36'053, '0079, '000952, 417, 85'5803, '0000501. (4) 16, 12'2, 371'057, '8241, 0'1, 1'235, 23'000358.
 - (5) 17:215, 3:0567, 1009, 2:07195, 365, 54:75.
 - (6) 231.8, 45.001, 5.7160, 4267.51, 50082, 605.
 - (7) 20'02, 576'89174, 1'0008150, '423564, 29, 7'21685.
 - (8) 61, 3'16004, '0478, 21'805, 1'00006, 12'9871.
- (9) '00625, 30'698, 2'7535, 19'84, 1875, 8'096. (10) 100, 1, '01, '001, '0001, '00001, '000001.
- 2. Find the values of —
- (1) 69:563 + 1307:2345 + 16:27 + 18:03 + 59:327 + 116:2491 + 3:0002
- (2) 15063+002857+30862+7693276+58739127+69325. (3) 77'3+160'6734+26'345+46+31'1+117'154+0002+2343'008
- +1'0000123+213'7+2'913+14'769+'007871.
 (4) R1150'217+R387'61+R71'316+R91'204+R74'031.
- (5) £573'162+£83'017+£92'159+£30'031+£99'999. (6) 1506'131 cwt.+702'021 cwt.+'7700'38 cwt.+ 310 7 cwt.+5'93 cwt.
- (6) 1596*131 cwt. +702*021 cwt. +*170038 cwt. +319 7 cwt. +5'93 cwt. (7) 97*316 yds. +1597*308 yds. +316*2917 yds. + 03 yd. +159*1 yds.
- (8) 27 tenths + 345 hundredths + 17 thousandths + 4256 millionths.

IV. SUBTRACTION OF DECIMALS.

340. RULE. Place the less number under the greater as in Addition: suppose ciphers to be supplied if necessary, in the upper line;

and the difference, found as in integers, will have as many decimal places as are contained in each, either expressed or understood.

Ex. 1. Subtract 34'917 from 41'62.

Ex. 2. Is '90437532 more nearly represented by '90438 or by

1 75 1000

90438 - 90437532 = 900000468; 90437532 - 90437 = 900000532. .. '90438 is nearer to '90437532 than '90437.

Examples C.

1. Subtract :-

- (1) '3806 from '57031; 7'908 from 19'201; 3'4796 from 56'036. (2) '013096 from '13096; '21968 from 1'026103; 6'90086 from 7.
- (3) '99999 from 9; '99071961 from '93107; '5968 from 1'11315,
- (4) '01 from '1; '0000 from '001; '672163 from 1'29613.
 - 2. Find the difference between :-
- (I) 27'903 and '054; 7295'06 and 254'738; 35'08989 and 3'508989.
- (2) 2'057 and 1'0007; 3'025 and '003025; '7053 and '6720.
- (3) 5'0000 and '080808; 136'159 and 136'0159; 13 and 5'00516.
 - 3. Find the values of :-
- (1) 1500'5 714'286: 15'903 4'606843: '001 '00001.
- (2) R45'21 R38'703; R8'264 R6'03176; R5'71021 R2'360684.
- (3) £836-£8347016; £70151-£158261; £70107-£6080706. (4) 6'4 mds. - '000064 md.; 23'5 tons - '9876 ton; 1'44 ft. - '00144 ft.
 - What number subtracted from 13'007 leaves 3'504?
 - What number added to 13'265 makes up 100'0008?
 - 6. Simplify:-
- (1) 5-3-22+2-333-1-4444; 2-194+15-367-10-009-11-25+5-8.
- (2) 227'0 (420'315+27'201)+865'21-1'057.
- (3) 17:073+1:3501-10:84-(11:03796-15:8+6:9).
- (4) 105'00-211'748-21'1748-15'73241+670'6-'0053. 7. Find the complement of '7781513; '000456; 98'654321;
- 9542'425; 998'899; and '00001. (See Art. 58.) 8. Whether is 3'1415926535 more accurately represented by
- 3'1415926 or by 3'1415927? 9. Express in the decimal notation, the value of 8:062r - 6:01
- '00375 + 1'00236 \$5575.

V WILLTIPLICATION OF DECIMALS.

341. Rule. Multiply together the numbers proposed as if the were integers: and the product will contain as many places of decimals, as there are decimal places in the multiplicand and multiplier together. If there are not figures enough, prefix the necessary number of ciphers.

Ex. 1. Multiply '627 by 1'50.

The number of decimal places in the multiplicand and multiplier is 3 and 2 respectively; therefore the number in the product is 3+2=5.

3135 the required product = 99693.

 $\frac{627}{99693}$ For $627 \times 1.59 = \frac{627}{1000} \times \frac{159}{100} = \frac{99693}{100000} = .9969$

Ex. 2. Multiply 7'5 by '000084.

7'5
The number of decimal places in the multiplicand and multiplier is 1 and 6 respectively; therefore the number of on the product is 1+6=7. But there are only 4 figures in the product; therefore prefix 3 ciphers.

6300 ... the product -- '0006300 -- '00063.

Examples CI.

1. Multiply :--

- (1) '718 by '57; 16:8 by '0024; 144 by '0625; 12 5 by '062216.
- (2) 270.56 by 37025; 00579 by 3796.8; 36.2185 by 229.
- (4) 384'759375 by '00032; '00082175 by 2 38645; '002 by '0004.
 - (5) '0000051472 by '0625; 948'7096 by '007089; 170'71 by '0325.
 - 2. Find the values of :-
 - (1) 3'51 x'075; '0167 x'008448; '354178 x'005; 3'12 x 2'0001.
 - (2) 3'005 × 40'23; 1'279 × '0008787; 35'04 × '0008 × 5'25.
- (3) '275 x 2'75 x 27'5; 3'24 x '0028 x 2'9375; 11'01 x 110 x '1102.
- (4) 1'02 × 102 × 10'2 × '102: 5'107 × '05 107 × '05 × 700.
 - (5) '4 x '05 x '000 x '0007 x 800000 ; '004 x '04 x '4 x '0004 x 40000.
 - (6) '01 x '001 X '0001 x '00001 x 100000 ; '845 x '0017 x 7'4 x '09 x 10000
 3. Find the values of :—
 - (1) 7.94 × 2.638 + 32.56 × .00457 .007853 × .00476 .000076 × 18.9.
 - (2) 592.9 × 61.6 × 0064+1562.5 × 0625 × 2.5-45.08 × 64.4 × 092.
 - (3) (37'1-19'08) × '703; 37'1-19'08 × '703; ('05)3+('025)2+ coo25.
 - (4) (36.73)2-(25.894)2; (.888)2-(.8008)2; (3.025)2-3.025 x.003025.

4. Multiply 325 tenths by 547 millionths; 128 thousandths by 78125 ten millionths.

VI. DIVISION OF DECIMALS.

342. When the divisor is an integer.

RULE. Divide, as if dividend and divisor were whole numbers; and when, in the process of division, the decimal point of the dividend is arrived at, place a decimal point in the quotient. If the division do not terminate with the last digit of the dividend, annex ciphers to the dividend and continue the operation until it terminates or the required number of decimal places in the quotient is obtained.

Ex. Divide 1875 by 25; 1770 89 by 4735 and 3217 by 625.

(1) 25)187 5(75 (2) 4735)1770800(374 (3) 623)32170000(5:1472)
175 14205 35039 3125
125 35045 2595

∴ the quotient=
$$\frac{7}{75}$$
 18940 3500

∴ the quotient= $\frac{374}{275}$ 4500

175 $\frac{1}{2}$ $\frac{1}{2}$

343. When the divisor does not exceed 20, or when it can easily be separated into factors none of which exceeds 20, the division should be performed by the method of short division.

Ex. Divide 56'787 by 12, and 1'21968 by 693.

344. When the divisor is a decimal.

RULE. Make the divisor a whole number by removing its decimal point altogether, and shift the decimal point of the dividend as amany places to the right as there were decimal figures in the divisor, anticoning for this purpose ciphers, if necessary, to the quotient, count off as many decimal places from the right as there are in the altered dividend, prefixing ciphers, if necessary.

Ex. Divide 10.836 by 5.16; 1875 by 2.5 and 62.5 by 225.

(1)	5.19)10.839	(2) 2.2).1872	(3)	025)62.5
	516)1083'6(2'1	25)1.825(.025		25)62500(2500
	1032	175		50
	516	125		125
	\$16	125		125

the quotient = 21. the quotient = 075. the quotient = 2500.

345. In the course of the division, if there be any remainder after the last figure from the altered dividend has been brought down, add ciphers to the right of the dividend, and proceed as in Art. 342.

Ex. Divide '01020 by 1'68.

168) 1029 Here the altered dividend has 3 decimal figures, and we have added to it 3 ciphers; therefore in the quotient, we must count off 6 decimal places.

. the quotient = '006125.

$$\frac{420}{420}$$
 For '01029 + 1'68 = $\frac{1}{10}\frac{6000}{600} + \frac{1}{100}\frac{600}{1000} \times \frac{1}{1000}$
 $\frac{336}{840}$ = $\frac{6}{1000} \times \frac{1}{1000} = 006125$.

346. In this case also, the method of short division can advantageously be employed when the divisor has been made an integer, as in Art. 343.

Ex. Divide 90.65 by '049, and 171'99 by 27'3.

347. If the division do not terminate, the quotient may be required to a given number of decimal places, as in the following examples.

Ex. Divide '02 by 1'7; 1 by '013 and 1 by '007, each to 5 places of decimals.

348. An integral divisor ending with ciphers may be deprived of the ciphers, if we remove the decimal point of the dividend one place to the left for every cipher withdrawn.

Thus, '78+60='078+6; '78+600='0078+6, and so on.

Ex. Divide 1'5625 by 25000, and 7 by 796'3 to 5 places of decimals

(1) 25000)1.2625 5)0015625 5),0003125 '0000625 Ans.

(2) 796.3)7.0 7963)70 00000('00879...Ans. 63704 62060 55741 72190 71667

349. In the above divisions, it should be very carefully noticed that for each digit in the decimal part of the dividend there is a digit in the decimal part of the quotient.

Examples CII.

1. Divide :-

- (1) 783'5 separately by 5, 25, 125, 625 and 6250.
- (2) 773'682 separately by 6, 13, 78, 169, 507 and 1014.
- (3) 00750116 separately by 677, 1354, 2708 and 10832.
- (4) 35'0424 by 7'02; '278831 by '653; 11'444405 by 4'735.
- (5) 1'68 by '024; 971'7 by '123; 142'025 by '0437; 84'375 by '00375. (6) '020872522 by '08635; '0020025 by '000864; '30538 by 5300.
- 1000, Aq 100, 5000, Aq 66; 90, Aq 4,80; 100, Aq 10010, 10, Aq 1, (4)
- (8) 9864'1698175 by 35'0645; 124'59993 by 3194'87.
- (9) 1'365 separately by 1'25, 12'5, '00125 and 12500.
- (10) 7.835 separately by '5, '25, 12'5, 6'25, '625, '0625 and 625000.
- (11) '0003738028 by '0476; '0064096 by 2'003; 614'50824 by '0010201. (12) 2 and 22 hundredths by 74 ten-thousandths.
- 2. Find the values of (to 5 places of decimals) :-(1) 3+876: '0257+'0041: 325'46+'0187: '0710+27'53.
- (2) '5+76'01342; II'121+3'4571; I6'1+63572'45; 25+19.
- (3) '046+'00762089; '32165+'0035216; 314150'26+'008597.
 - 3. Find the quotient, by short division, of :-
- (1) 3'6288 separately by '3, '7, '9, 6'3, 12'6, '189 and '024. (2) '0255 separately by '03, '005, 3'4, 60, '0102 and 2'55.
- 4. Divide, by short division, to 5 places of decimals :-
- (1) '009384 separately by 7, '07, '007, 1'8, '0018 and '00053. (2) 57982.6966 by .000000076; 346.72361 by .00016.
- 5. Find the values of :-
- (1) '01385 × 61'37 + 2'77; '309 × '007 + '000019; 24'01 × '0039 + 133'77.

- (3) (3:124+1:25) x (2:237 '026) + '0003; (2:05)2 x 2:24+ '0041. (3) 3833336+(8.90 × 20.8); "000785+"c005-"000075+15.
- (4) 206:59 + 1872 x '001 to 5 places; 15:8402 + 3:689 + 672:4 to 6 places

VII. REDUCTION OF FRACTIONS TO DECIMALS.

350. To reduce a vulgar fraction to a decimal.

RULE. Reduce the fraction to its lowest terms : then divide the numerator with as many ciphers annexed to the right of it, as may be deemed necessary, by the denominator; and the quotient comprising as many decimal places (counting from the right) as there are ciphers annexed, will be the decimal required.

Ex. 1. Reduce \$, align and 41 72 to decimals.

(i) 8) 9000 (2) 100|10 (3)
$$\frac{5?70}{5?5}$$

 \therefore decimal=\(\frac{3}{275}\), Ans. 64 $\frac{8}{8}$ \(\frac{9}{00015000}\) 125 $\frac{5?14}{5?14}$
 \therefore decimal=\(\frac{100015655}{00015655}\) Ans. \(\frac{1}{2}\) decimal=\(\frac{4}{100}\) \(\frac{6}{10}\) \(\frac{1}{2}\) \(\frac{1}\

For
$$\frac{3}{4} \approx \frac{3}{8} = \frac{3}{10} = \frac{3}{10$$

$$= \frac{1}{16} + \frac{7\frac{7}{2}}{100} \approx \frac{7}{16} + \frac{7}{160} + \frac{7}{160} + \frac{1}{160} = \frac{3}{16} + \frac{7}{160} + \frac{1}{160} = \frac{7}{16} + \frac{7}{160} + \frac{1}{160} = \frac{3}{16} + \frac{7}{160} = \frac{3}{160} = \frac{3}{16} = \frac$$

Similarly the other two can be explained.

Ex. 2. Convert
$$5^{-5}_{640} + 75$$
 of $1\frac{1}{2}$ of $7\frac{1}{2}$ into a decimal.
10)50 75 of $1\frac{1}{2}$ of $7\frac{1}{2} = 75$ of $\frac{1}{2}$ of $\frac{1}{2}$

Ex. 3. Find the value of $\frac{01491 \times 2^{\circ}204}{0071 \times 2^{\circ}1 \times 029}$

since
$$\frac{1491 \times 2204}{71 \times 21 \times 29} = 76$$
, There numera ... the control of the co

There are 8 decimal places in the numerator and 8 in the denominator. ., the quotient is an integer.

351. In some cases if the division do not terminate, neither is the corresponding decimal finite, and the vulgar fraction is expressed only approximately by the decimal fraction thus found; five or six figures are generally sufficient for all practical purposes, but the approximation will be nearer, the further the division is continued, inasmuch as by every succeeding step of the operation a decimal fraction of an inferior denomination is added to the value already obtained.

Ex. Express 16 as a decimal, as far as the sixth place.

... the decimal regd. = 681818. 6818181.....

Note. The following results are useful, and should be verified and remembered :--

$$\frac{1}{4} = 25$$
; $\frac{1}{2} = 5$; $\frac{3}{4} = 75$; $\frac{1}{8} = 125$; $\frac{3}{8} = 375$; $\frac{1}{4} = 625$; $\frac{1}{4} = 875$; $\frac{1}{16} = 6625$; $\frac{1}{2} = 2$; $\frac{1}{32} = 63125$. Examples CIII.

Reduce to decimals :—

- (1) 4; 4; 2; 4; 8; 6; 春; 香; 强; 3品; 强; 强;
- (2) 2500; 2500; 2504; 344; 456; 680 56; 7:100-
- (3) 1; 326; 24586; 1,327; 7,520; 3512x; 4:512x
 - 2. Convert into decimals :-
- (1) 17% of 114; 34 of 44 of 52; 36 of 24; 2+2+2+26.
- $\frac{12\frac{8}{4}}{10\frac{1}{6}}$; $\frac{11\frac{1}{16}}{62\frac{1}{6}}$; $\frac{5\frac{9}{8}}{7\frac{1}{2}}$ of $\frac{21^{\circ}25}{\circ 46875}$; $\frac{14\frac{1}{10}}{125}$; $\frac{6\frac{3}{4}}{11\frac{1}{4}}$; $\frac{17\frac{1}{8}}{12\frac{1}{2}}$.
- (3) 17 18 + 250 + 650 + 13 18 + 20 17 18 1 3 0 of 18 11.
- (4) 1'26 of 663+53 of 1'0375; 34 of '003-'0011 of 74.
 - 3. Express as decimals, as far as the sixth decimal place :-4 : 4 : A : A : A : B : 211 : 8 /c : 24 /c : 715.
- 4. Arrange in order of magnitude, by reducing to decimals :-(1) 2. 4. 3. (2) A. J. S. (3) 42, 14, 4 (4) 7, 4, 5, 3,
 - 5. Simplify the following :-
- '003125 x '48 (2) '0075 × 2'I (1) -0000125
- 1.18 x 3.04 (5) 304 × 118 (6) 152 × 5,02 × 00152 (7) 3'25-2'765+3'125 ×8-'607095+'027.
- (8) $\frac{22.4}{.25} + \frac{250}{.8} + \frac{1.2}{.0075}$; $5.634 \times .0057 + \frac{4.2325}{.8465} + \frac{.39424}{.5632}$

VIII. G. C. M. AND L. C. M. OF DECIMALS.

352. To find the G. C. M. and the L. C. M. of Decimals.

RULE. Make the same number of decimal places in each of the numbers (Art. 339); find their G. C. M. or L. C. M. as if they

were integers, and then mark off the said number of decimal places in the result, prefixing ciphers, if necessary.

Ex. Find the G. C. M. and the L. C. M. of 1 6, '24 and 14.

Here, the numbers are equivalent to 1'60, '24 and 14'00.

The G. C. M. of 160, 24 and 1400=8; their L. C. M.=16800.

.. the G. C. M. reqd. = '08; and the L. C. M. reqd. = 168'00 = 168. Examples CIV.

Find the G C M of :-

- (1) 1353'6 and 231'48. (2) 4'2237 and 755'82. (3) 36'795 and 57'98. (4) 376'1034 and 1081. (5) '14, 1'8 and '024. (6) '009, 1'8 and '24.
- (8) '016, '0024, 4'8 and 74. (7) 2'4, '48, '64 and 1'92.
 - 2. Find the L. C. M. of :-
- (1) 1'5, 35, '063 and 7'2.
 - (2) 6.3, .12, .084 and .0014.
- (3) 2'4, '39 and 3'76. (4) '312, '0124, 3'41 and 37'2.
- (5) 4'2237 and 755'82. (6) 1'36652 and 246'8642. IX. RECURRING DECIMALS.

353. In the conversion of a vulgar fraction into a decimal, we find that the division performed according to the Rule laid down in Art. 350 terminates in some cases and does not terminate in others. Thus, 2= 625, and here the division terminates; but 47= 272727....., and in this case the division does not terminate and can be extended to an unlimited length. The former is called a terminating or finite decimal, and the latter a non-terminating decimal.

354. It has already been shewn in Art, 331 that to reduce a vulgar fraction in its lowest terms to a decimal is the same as reducing it to an equivalent one having 10 or some power of 10 for its denominator. Thus, it follows that no vulgar fraction can be reduced to a terminating decimal, unless it can be expressed as one having to or some power of to for its denominator. Now, no number can, by multiplication, be made a power of 10, unless it be composed of prime factors, each of which is 2 or 5. Hence, to find whether a vulgar fraction can be expressed as a terminating decimal or not we have the following Rule.

RULE. Reduce the given vulgar fraction to its lowest terms, and resolve its dinominator into its prime factors; if these prime factors be only 2 and 5, it can be expressed as an exact or 'criminating decimal; otherwise, it cannot.

Ex. 1. Can 30 and Take be expressed as a terminating decimal?

- (1) Yes; for 50=2×5×5, and involves factors of 2 and 5 only.
- (2) Yes; for 1250=2 x 54, and involves factors of 2 and 5 only.

Ex. 2. Can $\frac{1+\pi}{2}$ be expressed as a finite decimal?

No; for 576=26×32, and involves other factors than 2 and 5.

Examples CV.

1. Which of the following fractions can be expressed as finite or terminating decimals:—
5.13.9.13.1.31.10.85.79.91.612.18941

2. Write down those numbers between 1 and 25, of which if any one be the denominator of a fraction in its lowest terms, that fraction can be reduced to a terminating decimal.

355. In non-terminating decimals the figures of the quotient

must recur over and over again.

Take the fraction 8. To reduce it to a decimal, we annex ciphers to 5 and divide by 7. Since the division does not terminate, we cannot have the remainder 0, and the only possible remainders that an arise are 1, 2, 3, 4, 5, and 6 and consequently after six when the most offers as many divisions at least as there are units in the denominator) we must come to the given numerator or to one of the remainders that has occurred before, and therefore from that point we must have a recurrence of the remainders, and therefore of the quotient figures in the same order over and over again. Thus, 71c0/71c35

part of a number, the figures repeat themselves indefinitely and in the same order, the number is called a recurring, circulating, repeating or periodic decimal; and the whole set of figures which recurs constantly in the same order is called the period or repetend.

357. The period is termed simple or a compound repetend according as it consists of one or more figures; and the extent of the period is denoted by means of dots () placed over the first and last of the figures which compose it.

Thus, $\frac{8}{3} = 2.6666.... = 2.6$; and $\frac{5}{4.7} = 135135... = 135$.

So, 57 = 575757...; 624 = 624624024...; 326 = 3262626.... The several periods in the above are 6, 135, 57, 624 and 26.

358. Recurring Decimals are either Pure or Mixed.

 (i) A pure circulating decimal is one which recurs from the first figure of the decimal part; as, 3, 578. (ii) A mixed circulating decimal is one which recurs after some figures and thus consists of a non-recurring and a recurring and a recurring.

рагt; лs, 17, 2468.

359. A vulgar fraction in its lowest terms, whose denominator contains neither of the prime factors 2 and 5, produces a pare circulating decimal, whereas one, whose denominator contains 2 or 5 and one or more other prime factors, produces a mixed circulating decimal.

Thus,
$$\frac{2}{3} = 6$$
; $\frac{1}{7} = 142857$; $\frac{7}{22} = \frac{7}{2 \times 11} = 318$.

Ex. 1. Convert I and I into decimals.

(1) 3)7(2·3···

Here, a repetition of 1 in the remainder gives a repetition of the figure 3 in the quotient.

... $\frac{1}{3} = 2^{n} \frac{1}{3}$.

... § = 2'3

(2) 27)4.0(.148...

The figure 4 occurs again in the remainder after 3 steps, therefore the digits 1, 4 and 8 must recur in the quotient.

216 4

For $\frac{1}{3} = 2\frac{1}{3} = 2 + \frac{1}{3}\frac{1}{6} = 2 + \frac{1}{10} = 2 + \frac{3}{10} = 2 + \frac{1}{10} + \frac{1}{3}\frac{1}{6} = 2 + \frac{1}$

$$=2+\frac{3}{10}+\frac{10}{100}=2+\frac{3}{100}=2+\frac{3}{100}=2+\frac{3}{10}+\frac{3}{100}+\frac{3}{100}=2\cdot33.....$$

Similarly, the second can be explained.

Ex. 2. Reduce at to a decimal.

Here, the remainder 32 which occurred after the second step occurs again in the third, and therefore the figure 8 will recur in the quotient. $\frac{1}{3} \frac{1}{8} = \frac{138}{3}$

Examples CVI.

Reduce to recurring decimals :--

1 8: A: 18: 4: W: 18: 4: 11: 4: 13: 15: 915.

2. 15; 4; 46; 756; 561; 3歲%

- 3. mår ; 504 : 828 : 625 : 486 : 910 : 9848 : 486.
- 4 1000 : 20000 : 7624 : 28173 : 207 : 541 : 861

360. (i) In a given recurring decimal, the period may be supposed to begin at any point we please after the first repeating figure.

Thus, 15'45387387...=15'45387=15'453873=15'4538738=&c.

(ii) Sometimes the period is made to commence in the integral part. Thus, 64:25 = 64:254 = 64:2542 = &c.

(iii) The number of digits in the period may be repeated as often as we please without altering the value of the decimal.

Thus, 8:546 = 8:54646 = 8:5464646 = &c.

(iv) In the conversion of a fraction to a recurring decimal, we may often shorten the work by expressing the remainder at some sten as a fraction. Thus,

\$= 1428; . . \$= 1428 × 6= 8571; and . . \$= 1428571= 142857. 361. When recurring decimals have the same number of nonrecurring figures and also the same number of recurring figures, they are said to be similar.

Thus, '34258 and 6'17863 are similar recurring decimals.

361. All recurring decimals can be made similar.

RULE. Extend each decimal as far as the farthest nonrecurring figure in any of them; then find the L. C. M. of the numbers of figures in each period, and extend each period so many places further.

Rx. Make 4'238, '1234 and 54'023 similar.

4238 == 4.23.888888 Here, we see that the first term has the largest number of non-1234= 12 342342 recurring figures; i. c. 2 figures. 54'023 = 54'02 323232 So extend each decimal 2 places.

The periods which consist of 1, 3, 2 figures respectively, are then extended 6 places, for 6 is the L. C. M. of 1, 2 and 3.

Examples CVII.

1. In the following recurring decimals begin the period at the fifth decimal place :-

3.25; 4.7; 290 02; 36; 21.14; '0352; '7065; '0463; 3.45. 2. Extend '57, 2'\$4 and '064\$ so that they may have the same

number of figures in the period. 3. Extend '123, '1234 and '1234 so that they may have the

same number of recurring figures.

4. Convert the following vulgar fractions into recurring decimals by the method of Art. 360 (iv) :-

11: 4: 4: 4: 4: 4: 4: 4: 44: 44.

5. Make the following recurring decimals similar :-

(1) 3'076, 9'245, '203. (2) '8, '87, '876. (3) '414, '9352, 6'1013. (4) '5507, '9463, 1'413, '7065.

(5) 7854, '\$9, 14'57, '0045. (6) 9'7012, 4'403, 10'8402137. '21865.

363. To find the vulgar fraction which shall be equivalent to a ture recurring decimal.

RULE. Make the period the numerator of a fraction whose denominator shall consist of as many nines as there are figures in the said period; and this reduced to its simplest terms will be the vulgar fraction required.

Ex. Convert '6 and '96 into equivalent vulgar fractions in their lowest terms.

(1)
$$\dot{f}_{0} = \frac{6}{9} = \frac{3}{9}$$
. (2) $\dot{g}_{0} = \frac{36}{99} = \frac{38}{93}$.

Proof. For the sake of conciseness, let x and y represent their values respectively : then, we shall have

$$x = .6666...$$
 $y = .9696...$ 100 times $y = .969696...$

whence, subtracting in each case, the former from the latter, we obtain o times x = 6. 90 times y=96,

and
$$x = \frac{6}{9} = \frac{3}{3}$$
. and $y = \frac{94}{9} = \frac{3}{3}$.

364. To find the vulgar fraction which shall represent the value of a mixed recurring decimal.

RULE. Make the non-recurring and the recurring parts taken together, diminished by the non-recurring part alone, the numerator of a fraction whose denominator shall consist of as many nines as there are recurring figures, followed by as many ciphers as there are non-recurring figures; and this reduced to its lowest terms will be the vulgar fraction required.

Ex. Convert 27, 2457 and 21136 into equivalent vulgar fractions in their lowest terms.

$$(1)^{3} \cdot 27 = \frac{27 - 2}{90} = \frac{25}{90} = \frac{5}{18} .$$

$$(2) \cdot 24\frac{57}{9900} = \frac{2457 - 24}{9900} = \frac{2433}{9900} = \frac{811}{3300} .$$

$$(3) \cdot 011\frac{36}{90000} = \frac{1136 - 11}{90000} = \frac{1125}{88} .$$

Proof. For the sake of conciseness, suppose x and y to represent the values of (1) and (2) respectively; then, we shall have

whence, subtracting the second line from the third in each case, we find

$$90x = 27 - 2 = 25,$$

$$x = \frac{27 - 2}{90} = \frac{25}{90} = \frac{5}{18}.$$

$$9900y = 2457 - 24 = 2433,$$

$$9900y = 2457 - 24 = 243,$$

$$9900y = 2457 - 24 = 245,$$

$$9900y = 2457 - 24 = 245,$$

$$9900y = 2457 - 24 = 245,$$

365. The above method is also applicable if there should be some integral figures in the decimal, but the equivalent vulgar fraction is improper. If it is required as a mixed number, we may either reduce this to mixed number or apply the method given below and thus obtain it at once in that form.

Ex. Express 2.27 and 4.583 as vulgar fractions.

(1)
$$2\cdot 2\dot{7} = \frac{227 - 2}{99} = \frac{225}{99} = \frac{25}{11} = 2\frac{3}{11}$$
; or $2\cdot 2\dot{7} = 2 + 2\dot{7} = 2 + \frac{27}{99} = 2\frac{3}{11}$.

(2)
$$4.583 = \frac{4583 - 45}{990} = \frac{4538}{990} = \frac{2269}{495} = 4\frac{289}{495}$$
;

990 495 495 495
$$\frac{783-5}{990} = 4\frac{578}{990} = 4\frac{289}{495}$$
.

366. It follows from the Rule that $9 = \frac{3}{3} = 1$; $99 = \frac{9}{10} = \frac{1}{10} = 1$.

Similarly, 069=07; 0259=026. Hence, whenever 9 occurs at the end of a decimal, it should be omitted, and the preceding figure-increased by 1.

367. The following equivalent forms with their converses should be verified and committed to memory :-

Also
$$T_0 = 070933$$
; $T_0 = 230709$; $T_0 = 692307$;

Sindenis should carefully notice the decimals equivalent to vulgar fractions with denominators; and 13. All are pure circulating decimals, and the same digits 14285; n 95033 and 15346 occur in all respectively. Now, if these digits be placed round a circle, and read off, beginning with 1, 2, 4, 5, 7, 8; 0, 2, 3, 6, 7, 9 and 1, 3, 4, 5, 6, 8, in turn, 5, 7, 8; 0, 2, 3, 6, 7, 9 and 1, 3, 4, 5, 6, 8, in turn, the circle, decimals equivalent respectively to \$\frac{1}{2}\$, \$\frac{1}{2}\$

4. Convert the following volgar fractions into recurring decimals by the method of Art. 360 (iv) :-

H; L; E; B; B; B; B; B;

5. Make the following recurring decimals similar :-

(1) 3'076, 9'245, '263. (2) '8, '87, '876. (3) '414, '0352, 6'1013. (4) '5507, '0463, 1'413, '7065.

(s) -28si, -50, 14-57, '00i5. (6) 0-70i2, 4:403, 14-33, 7003.

363. To find the vulgar fraction which shall be envisalent to a ture recurring decimal.

RULE. Make the period the numerator of a fraction whose denominator shall consist of as many nines as there are figures in the said period; and this reduced to its simplest terms will be the vulgar fraction required.

Ex. Convert 6 and 66 into equivalent valour fractions in their lowest terms.

(1)
$$\dot{\beta} = \frac{6}{9} = \frac{2}{3}$$
. (2) $\dot{g}\dot{b} = \frac{6}{9} = \frac{2}{9}\frac{2}{3}$.

Proof. For the sake of conciseness, let x and y represent their values respectively : then, we shall have

x= '6666... v= '9696... * to times x = 6.6666..... 100 times y=96'9696...

whence, subtracting in each case, the former from the latter, we obtain o times x=6. oo times v = 06.

and
$$x = \frac{6}{3} = \frac{3}{3}$$
. and $y = \frac{36}{3} = \frac{36}{3}$.

364. To find the vulgar fraction which shall represent the value of a mixed recurring decimal.

RULE. Make the non-recurring and the recurring parts taken together, diminished by the non-recurring part alone, the numerator of a fraction whose denominator shall consist of as many nines as there are recurring figures, followed by as many ciphers as there are non-recurring figures; and this reduced to its lowest terms will be the vulgar fraction required.

Ex. Convert 27, 2457 and 21136 into equivalent vulgar fractions in their lowest terms.

$$(1)^{\frac{1}{2}} \cdot 27 = \frac{27 - 2}{99} = \frac{25}{99} = \frac{5}{18} .$$

$$(2) \cdot 24\frac{57}{2} = \frac{2457 - 24}{9900} = \frac{2433}{9900} = \frac{811}{3300} .$$

$$(3) \cdot 011\frac{36}{90000} = \frac{1136 - 11}{90000} = \frac{1136 - 11}{88} .$$

Proof. For the sake of conciseness, suppose x and y to represent the values of (1) and (2) respectively; then, we shall have

$$x = 27777.....$$
 $y = 2457575757.....$ $10x = 277777.....$ $100y = 2457575757.....$ $1000y = 2457575757.....$

whence, subtracting the second line from the third in each case, we find

Ex. Express 2.27 and 4.583 as vulgar fractions.

(1)
$$2^{1}\cancel{2}\cancel{7} = \frac{227 - 2}{99} = \frac{225}{99} = \frac{25}{11} = 2\frac{3}{11}$$
; or $2^{1}\cancel{2}\cancel{7} = 2 + \frac{27}{27} = 2 + \frac{27}{99} = 2\frac{3}{11}$.

(2) $4.5\dot{8}\dot{3} = \frac{4583 - 45}{990} = \frac{4538}{990} = \frac{2269}{495} = 4\frac{289}{495}$;

or
$$4.583 = 4 + .583 = 4 + \frac{583 - 5}{990} = 4 + \frac{578}{990} = 4\frac{289}{495}$$

366. It follows from the Rule that 9=9=1; $99=\frac{1}{9}=1$, $9=\frac{1}{9}=1$. Similarly, $99=\frac{1}{9}=1$. Similarly, $99=\frac{1}{9}=1$. Hence, whenever 9 occurs at the end of a decimal, it should be omitted, and the preceding figure-increased by 1.

367. The following equivalent forms with their converses should be verified and committed to memory:-

Also -\= -076023 : -\(= -230769 :

$$\tau_{ii}^{*} = \dot{3}07692$$
; $\tau_{ii}^{0} = \dot{6}92307$; $\tau_{ii}^{0} = \dot{9}23076$.

Ex. Express 382142857 as a vulgar fraction. $382142857 = \frac{3821}{1000} = \frac{2675}{7000} = \frac{107}{280}$.

Examples CVIII.

- 1. Convert the following recurring decimals into vulgar fractions in their lowest terms:
- (1) '\$; '627; '\$34; '4263; '56; '259; '7227; '620268.
- (2) '3621 ; '47543 ; '05 ; '00495 ; 3'545 ; '196 ; '16527 ; '5416.
 - (3) '0432 ; 21'9045 ; '6761904 ; '008497133 ; '81136 ; '444108.
- (4) 241254; 1'0428571; 2'6428571; 3'8643618; 13'94230769.
- (s) 6,769230; 50,230769; 4,150,76923; 0,12345670; 278,46153.
 - 2. Express the following as finite decimals :-

oo ; 4369 ; 4579 ; 25'999 ; 15'89 ; 3'7899 ; 59'999 ; 'oo).

Required the least numbers of which 476100 is the recur-

 Required the least numbers of which 476190 is the recurring quotient: and find the error in the corresponding fraction when 47619 is taken to represent it.

4. Prove that
$$\frac{1}{9} = \frac{1}{1} = \frac{2}{3} = \frac{3}{3} = \frac{4}{4} = \frac{5}{5} = \frac{6}{6} = \frac{7}{7} = \frac{8}{8} = \frac{9}{9}$$
.

5. Prove that
$$\frac{1}{11} = \frac{45}{5} = \frac{43}{6} = \frac{63}{7} = \frac{81}{8} = \frac{90}{9} = \frac{10}{10}$$
.

X. ADDITION OF RECURRING DECIMALS.

368. To find the accurate sum of several recurring decimals.
Rule. Write down the decimals under one another making

them all similar (Art. 362), and afterwards extend two places more to make sure that we are carrying the correct figure to the last place of the second extension. Add in the usual way. Then in the sum the first extension will give the non-recurring part, and the second the recurring part.

Ex. Add together 32'01011, 76'0914, 5'137 5, 98'863.

32'01 011101110111 01 76'09 149149149149 14 5'13 75375375375375 08'86 33333333333333 212'10 247337346347 Ans.

Here, the greatest number of non-recurring figures is 2; so extend each decimal 2 places. The periods consist of 4, 3, 1 figures, of which the L. C. M. is 12; so extend each to 12 places, and two places more to ensure accuracy of the last figure retained. In the sum, 10 is the non-recurretained.

ring part and 247337346347 is the recurring part.

369. To find the sum of several recurring decimals approximately correct to a given number of decimal places.

RULE. Set down the decimals under one another repeating the period of each 2 or 3 places more than what is required in the sum. Then add in the usual way, taking care that the last figure retained be increased by 1, if the succeeding figure be 5, or greater than 5.

Ex. Find the sum of 13.5, 2.025, 111.0004, 3.14150, and 2.024 approximately correct to 6 decimal places.

13.555555555 3.035252 52

Here, by carrying out the decimals to 8 places, 111'00044144 we ensure the accuracy of the first 6 places. Also in the sum, as we stop at 8 and the succeeding 3'141591 59 2.024034|03 figure is 1, we need not increase 8 by 1.

131'746868112

Examples CIX.

Add together accurately :---

(1) 4.6+.251+.02514; 4187+.306+.125; 2.001+.1818+.5. (2) '101+'243183+'1236+45'29; 3'090+'4071+35'13+76'5.

(3) 37.6423\$ +0.2642037 +5.402\$ + 1.408 + 603306.

(4) 4.00348+.08488004+36.1613+1.006

(5) 3'1416+8'25 142857+'034+23'257635+5'45627.

2. Find the values (app. correct to 7 places of decimals) of :-(1) 7.90+3416+3.245+1.8; 6.127+3.801+1.0313+6.

(2) 45.6701+41.209+513.317+6.7493+4.4567.

(3) '7395 +71'3+16'284+162'7354+18'29+1'6+3'97. (4) 138+142857+2418+206+4263+008497133.

XI. SUBTRACTION OF RECURRING DECIMALS. 370. The RULES given for Addition are also applicable in the Subtraction of recurring decimals.

Ex. 1. Subtract 5'98765 from 28'035471.

28 0354 71717171 5'9876 576576 57 22'0478 140505 Ans.

Here, the periods have 2 and 3 figures; their L. C. M. is 6; therefore the recurring part in the difference contains 6 figures.

Ex. 2. Find (1) the difference of 2'02341 and '628 attraximately correct to 6 decimal places : (2) the complement of 6142857.

(1) 2'023413|413 628888888 1'394524 525 (2) 1'00000000000 6142857 14 3857142 86

.. difference=1'394525.

.. complement = 3857143.

Examples CX.

1	Find	tho	accurate	difference	of.	

- (1) $17^{12}16\frac{1}{3} 12\frac{1}{3}6$. (2) $1306\frac{1}{3}4$ $123\frac{1}{3}6$. (3) $136\frac{1}{3}01 12\frac{1}{3}2$. (4) $15^{16}2\frac{1}{3} 11^{12}2$. (5) $365^{12}27\frac{1}{3}21 148^{19}7$. (6) $25^{14}2^{1} 16^{18}7^{18}$.
- (7) 673459-30726. (8) 714285-001136. (9) 7:3214-1:207.
- 2. Find the values (app. correct to 6 places of decimals) of :—
 (1) \$\delta 4 \text{vo7}6923\delta\$. (2) \$78\delta 1 19684. (3) \$142\delta 5 109\delta 2.6
 (4) \$142\delta 05 180\delta 16\delta\$. (5) \$28\delta 80\delta 72\delta 3.5
 (6) \$38\delta 4 20\delta 7.5
 - Find the complements of '04563; '0789; 25'6420370.
- 4. Find the values of :-
- (1) 57802-2368+1754+2105-129761-3215.
- (2) 14.8976-27.3150-49.81+15.763+183+21.05.
- (3) 187130-587+161 0235+21-8 004. (4) 75+1230-597305+90028-61257-2071.

XII. MULTIPLICATION OF RECURRING DECIMALS.

371. To multiply a recurring decimal by an integer or by a terminating decimal.

RULE. Proceed in the usual way, extending the decimal or 3 places beyond the end of the period, in order to ensure the correctness of the last digit retained, and in the product point off as many decimal places as there are decimal places in both the multiplicand and multiplier. The product will also be a recurring decimal of the same kind as the multiplicand it.e. with a period containing the same number of multiplicand the same number of mu

Ex. 1. Multiply 37'83459 by 7, and 37'8236 by 11.

1) 37·83459⁴59 (2) 37·8236³⁶

264'84216 416'05.99 416'06. (Art. 366.)

Ex. 2. Multiply 6'3917825 by 6'924-

6'391782\$|017 255073038|071 6'924 12783505 18356 575260433316043 127835051 383505055506|955 575260433 44'256'02665 \$\frac{1}{2}\$035 Ans.

372. To multiply one recurring decimal by another.

RULE. Convert the given decimals into equivalent vulgar

fractions, and multiply as in Art. 270. Then reduce the resulting fraction to a decimal.

Ex. Multiply '089 by '028.

$$089 = \frac{89 - 8}{900} = \frac{81}{900} = \frac{9}{100}$$
; $028 = \frac{28 - 2}{900} = \frac{26}{900} = \frac{13}{450}$.

... the product reqd. = $\frac{9}{100} \times \frac{13}{450} = \frac{13}{5000} = \frac{26}{10000} = \frac{0026}{0000}$. Ans.

Examples CXI. 1. Multiply :-

- (1) '37642 by Q ; '37642 by t1 ; '37642 by 37 ; '008376 by 762.
- (2) 432244318 by 88; 7853981 by 3457; 634287 by 501723. (3) 35 by 8; 361 by 022; 354268 by 144; 15073 by 2.4.
- (4) 2'3857142 by 5'6; 27'38443 by 26'7; 9'3850787 by 7'659. 2. Find the values of :-
- (1) 4'8 × 24 : 7'63 × 8'83 : 10'72 × 29'45 ; 7'5 × '01500.
- (2) 6.36 x.371428 : 1.18 x.338461 : 5598.9243 x 8.247.
- (3) 2.27 × 249; '073 × 2.72; 49.3 × '29954; '12837 × 2.5227.
- (4) '0021 × 48'026 : '428571 × '3 of 3'8 : 44'2064 3 × 1'582 3707.

XIII. DIVISION OF RECURRING DECIMALS

373 To divide a recurring decimal by a whole number or by a terminating decimal.

RULE. Proceed as in ordinary division, bringing down the digits of the period in succession. The quotient will also be a recurring decimal.

Ex. Divide 8'9854 by 12 and '6559903 by 48'76.

(1) 12)8 98544444...('74878703

(2) 4876)65.5990399...(134534... 14628

16830 22110 10504 14628 26063 22119 19504 104 16830 2615

.. the quotient = 74878703 ... the quotient - 0134534 ...

374. To divide one recurring decimal by another.

RULS. Convert the given decimals into vulgar fractions, and divide as in Art. 274. Then reduce the resulting fraction to a decimal.

Ex. Divide 1:13 by 000132.

$$1.13 = \frac{113 - 11}{90} = \frac{102}{90} = \frac{17}{15}; \cos 0.132 = \frac{132}{999900} = \frac{1}{7575}.$$

: the quotient reqd. = $\frac{17}{15} + \frac{1}{7575} = \frac{17}{15} \times \frac{7575}{1} = \frac{8585}{1}$ Ans.

Examples CXII.

Divide:—

- (1) '3 by 5, by 7; 37°887 by 5, by 45; '3325 by 125; '461538 by 30.
- (2) 3'457954 by 8; 37'635842 by 7; 539'63436 by 112.
- (3) 235'47 by 24 × 20; 7476 by '07; 9'40 by 1'5; 3'6 by 2'4.
- (4) '028342012 by 14'156; 20'13972 by 42'1; '10101 by '00036.

2. Find the values of :--

- (1) 3'8+2'73; 1'90+'583; 60'45+7'38; 11'83+'249; '37+'148. (2) 4'03+'1407; '01236+'051; 0'53+3'2083; 6'801+15'48.
- (3) '89i + 1'29; '0057 + '213; '125 + '25i; 7'39 + '079.
- (4) 411'3\$10+10'\$8\$: 14'476100+2'1500: 77'67027+0'486.

XIV. SIMPLIFICATION OF DECIMAL PRACTIONS.

Ex. 1. Simplify
$$\frac{13 \times 14 \times 01 - 12 \times 14 \times 02 + 12 \times 13 \times 01}{01 \times 2 \times 01}$$

The given fraction = $\frac{.000182 - .000336 + .000156}{.00002} = \frac{.000002}{.00032} = .1$, Ans.

Ex. 2. Find the value of
$$\frac{28 \text{ of } 2 \cdot 27}{1 \cdot 136} + \frac{4 \cdot 4 - 2 \cdot 83}{1 \cdot 6 + 2 \cdot 629} \text{ of } \frac{68 \text{ of } 3}{2 \cdot 25}$$
.

$$\begin{split} \text{The value} &= \frac{2^4 \times 2_1^9}{1_0^{10}} + \frac{4^44444 - - 2^83333}{16666 + 2^462959 - 1} \text{ of } \frac{202}{2^25} \\ &= \frac{14}{5} \times \frac{25}{1} \times \frac{999}{292} + \frac{136}{4^296} \times \frac{202}{292} = \frac{28}{8} + \frac{146}{1699} \times \frac{136}{15} \\ &= \frac{28}{5} + \frac{145}{99} \times \frac{999}{4992} \times \frac{136}{15} = \frac{35}{8} + \frac{17}{5} - \frac{45}{9} - \frac{9}{4} \text{ Ans.} \end{split}$$

Examples CXIII.

Simplify:-

1. 1.72 of 276 of 15.
 2. 1.83 of 954 of 42857i of 2.25.

3. $6\frac{3}{5}$ of $4\cdot11$ of $\frac{3}{13}$ of $2\cdot432$. 4. $\frac{2\frac{3}{3}}{3\frac{1}{3}}$ of '0006 of $\frac{4\frac{5}{5}}{10024}$.

5. \frac{1064 + 13^25}{19375} \cdot 6. \frac{13^25 + 1078 - 1003}{1005} \cdot 7. \frac{1011 \times 133^21 - 723 \times 100723}{1^21377} \cdot

8. $\frac{5!1183}{00705}$ of 11'i of '29 of '117. 9. $\frac{112(02 \times 03 - 04 \times 01) + 16 \times 21}{11 \times 023 \times 01}$

10. $\frac{2^{5}+1^{2}5-2^{2}12^{5}}{375+2^{2}3-4^{2}5}$ 11. $\frac{03}{123}$ 12. $\frac{1+54\times64}{1+2^{2}3\times33}$

13. $\frac{\cos 5}{3 \text{ of } 13\frac{3}{2}} \text{ of } \frac{26^{\circ}25}{3 \text{ of } 275}$. 14. $\left(37 + \frac{376^{\circ}37}{100}\right) \times 54$. 15. $\frac{^{\circ}428571}{01714285}$

16. $\frac{7\frac{1}{2} \times 3\frac{3}{6}}{75 \times 366} + \frac{2\cdot 3}{2\frac{3}{6}} \text{ of } \frac{15}{3\frac{3}{4}} + \frac{7\cdot 25}{11\frac{3}{6}}$. 17. $\frac{04275}{3\cdot 05} \times \frac{4\cdot 216}{3\cdot 05} \times \frac{2\cdot 7}{342} \times \frac{2\cdot 7}{15318}$

18. $\frac{'125}{100} - \frac{'0625}{25} - 2'25 - \frac{'005 \times 1'25}{2'5} + 3'1 - \frac{'5}{1000}$

19. $\frac{8\cdot571428+\frac{1}{4}2857}{\frac{4}{5}71428+\frac{1}{4}28571}$. 20. $\frac{8\cdot571428\times17}{2\frac{3}{2}}$ × $\frac{216 \text{ of } \frac{1625}{48}}{48}$.

21. $\frac{2\cdot 6 \text{ of } 2\cdot 8\dot{3}}{6\cdot 2 \text{ of } 85714\dot{2}} + \frac{4\dot{2} \text{ of } 4\cdot 0\dot{3}\dot{6}}{3\cdot 75 \text{ of } 1\cdot \dot{7}}, \quad 92. \frac{2\cdot 375}{3\cdot 1\dot{6}} \text{ of } \frac{4\cdot \dot{4}}{6025} + \frac{8\cdot \dot{8}}{7} \text{ of } \frac{1\dot{6}}{5\cdot 62\dot{5}},$

23. $\frac{4\cdot 2-3\cdot 1\cdot 4}{1\cdot 3+2\cdot 10\cdot 2}$ of $\frac{1\cdot 3}{37}$ of $\frac{4\cdot 8}{01}$. $24\cdot \frac{044\times 2\cdot 1}{000035} + \frac{3\cdot 076923}{2\cdot 3\times 5\cdot 6}$.

25. 3'302083 + 6'6 x'375 + 2'772 16'510416 + 15 of \$38461 of \$ 11'69

26. $\frac{\frac{1}{2} \times \frac{1}{2} \times \frac{1}{2}$

58. 10. x 10

29. 6 of 3'3 of $\frac{175}{2.625}$ of 17+4 of 5.75- $\frac{1.714285}{2.695238}$

 $30. \quad \frac{2^{\circ}375}{3^{\circ}16} \text{ of } \frac{4^{\frac{1}{10}}}{10625} + \frac{8^{\circ}8}{5^{\frac{1}{10}}} \text{ of } \frac{1571428}{5^{\circ}} - \left\{\frac{2^{\circ}80}{1^{\circ}136} - 4^{\circ}1^{\circ}10 \right\} \text{ of } \frac{4^{\circ}4 - 2^{\circ}83}{1^{\circ}1^{\circ}2 + 2^{\circ}623} \right\}.$

XV. REDUCTION OF DECIMALS.

375. A general view having now been taken of decimals, we proceed to show how they may be made to change their denominations when they are considered as belonging to a particular unit; and in what ways they may be adapted to the particular computations in which they are most frequently employed.

376. Reduction of Decimals can conveniently be classed under the two following heads :-

(I) To reduce a decimal of one denomination to a lower denomination : and conversely.

(2) To reduce a quantity of one denomination to a decimal of a higher denomination.

377. Case I. To reduce a decimal of one denomination to a lower denomination. (Descending Reduction).

RULE. Multiply the decimal of the given denomination by the number which connects the lower denomination with one (or unit) of the given denomination.

Ex. Reduce Rs.7'15 to pies, and '045 of £7 to farthings.

878. Case II. To reduce a quantity of one denomination to a decimal of a higher denomination. (Ascending Reduction).

RULE. Divide the number of the given denomination by the number which connects that denomination with one (or unit) of the higher denomination.

Ex. Reduce 3333 pies to the decimal of a ruper, and 213 grs. to the decimal of an os. Trov.

.. the read. decimal == '0453125 0z.

379. Sometimes we employ both the descending and the ascending process in reducing a decimal of one denomination to a decimal of another denomination.

Ex. Reduce 78936 of a guinea to the decimal of £1.
78936 gui.

21

 $\frac{20}{6.828828}$: the reqd. decimal = £.828828.

Reduce :-

Examples CXIV.

£'02375; £'00375; £3'5478; £'00625; £'28125 to pence.

03125s.; £'8947916; 'ooi guinea: £'47083; £'383 to farthings.
 Rs. 5'00025; Rs. 276543; '775625 of Rs. 5; Rs. 3'049 to pies.

4. Re. 972916 Re. 40972; Re. 68125; Re. 634375; Re. 3405 to pice

 7859 cwt. to ounces; 4'34954 miles to yards; 549675 days. to seconds; 2'5384375 of a day to seconds.

6. '6197916lb. Troy to grains; '678571428 week to minutes.

7. $_3$:6874 acres to sq. yds.; '0475 gallon to pints; 2'274025 mds. to chataks. '825 of a lea. to yards.

8. 8 4d; '335s; 6'375d; '4068q. to the decimal of £1.
9. 37'0872 sec. to the dec. of a day: 420'8138 sq. yds. to the

decimal of an acre; 2.25 of 3.5 ac. to poles.

10. 47733 lbs. to the dec. of a ton; I oz. Avoir, to the dec. of

47'733 lbs. to the dec. of a ton; I oz. Avoir. to the dec. of a ton.

11. £625 to the decimal of a guinea, and of half-a-guinea.

12. 527'3994 yds. to the dec. of a mile; '54375 lbs. Troy to ounces Avoir, ; 1 oz. to the dec. of a ewt.

380. The preceding two cases of Art. 376 enable us

(i) To reduce a decimal of one denomination to a compound quantity of lower denominations; and

(ii) To reduce a compound quantity to a decimal of a higher denomination.

381. Case I. To reduce a decimal of one denomination to a compound quantity of lower denominations.

RULE. Multiply the decimal by the numbers which connect the successive denominations in order; and the integral parts of the products taken out, as they occur, will be the value required.

Ex. 1. Find the values of Rs.3'46875 and £5'6125.

(1) Rs.346875 (2) £5 6125 16 20 20 5. 12*2500

 $\frac{12}{p.60}$ $\frac{12}{d.300}$

The reqd. value=Rs.3. 7a. 6p. The reqd. value=£5. 12s. 3d.

Ex. 2 Find the values of 4:215 of Rs.7 and 31:2583 of £2. (2) 31.2583 (1) 1'215 Rs.20'50 £62:5166 ... a.8:080 s.10'3333...s

12 40.06 d.3'9999 ... The read value = Rs.29, 8a, 0.96p. The read, value = £62, 105, 4d.

382. Case II. To reduce a compound quantity to a decimal of a higher denomination.

RILE. Divide the lowest denomination by the number which connects it with the next, and to the left of the quotient affix the number of this denomination; and continue the process till the required denomination is obtained.

Ex. 1. Express Rs.5. 1a, 6b, as the decimal of Re. 1, and £3. 18s. 111d. as the decimal of £1.

(1) 12)6%. (2) 16:1'50. Rs.5'09375 20)18:03758. The reqd. decimal = Rs.5'09375. 1,3946875

The read, decimal = £3'046875 Ex. 2. Reduce 7 fur. 25 po. to the decimal of a mile, and 1420z

Avoir, to the decimal of 1 oz. Trov. 40)25 DO (2) 5) 2. 8) 7'625 fur. 16) 14'4 oz. 20) 262'5 dwts. 953125 mi. 7000 13'125 oz. Trov.

The read. decimal = '053125 mi. 6300 grs. The read. decimal=13'125 oz. Troy,

Examples CXV.

- 1. Find the values of :-
- (1) Rs.5'07125; Rs.80'075; '016 of a rupee; 30'36 of '75 of Rs.10.
- (2) '45 of £1; '16875 of £3; 2'36875 of £6; £'5675; £'0484; £'7.
- (3) 340625 of £1; 615 of 1s. ; 4835 of £1; £5.6125; 4375 of £1. (4) '375 of a guinea; 1'025 of a guinea; '7635416 of £1; '4583 of 1s.
- (5) '375 of a cwt.; '6875 of a vard : 13'3375 acres : '655 of a day.
- (6) Rs.5 7989583; 8716 of a ton; 2.5384375 days; 22.25 of 17 half-crs.
- (7) '000035511363 mile ; '10714285 of a cwt. ; '09375 of an acre.
- (8) '00625 of 1 md. ; '0138 of 3'5 moidores ; 3'23 of 13 acres.

2. Reduce :-

- 5¼d;¾d; 8s. 11¼d; 1s. 3¼d; £t. 14s. 10½d to the decimal of 1s.
 12s. 6¾d; 15s. 9¾d; 17s. 0¾d; 1½d; £2. 15s. 9¾d to the dec. of £1.
- (3) 7a. 6p.; 8a. 3b.; 13a. 6\$p.; Rs.53. 13a. 8p. to the decimal of 1 Re.
- (4) 18s. 112d. to the dec. of a guinea; 4 guineas to the dec. of £50.
- (5) Rs.2, 13a, 10β, to the dec. of Rs.5; Rs.35, 14a, 6β, to the dec. of Rs.25; Rs.6 6a, 8β, to the dec. of Rs.10, Sa.
- (6) 12s. 6\(\frac{1}{2}d\) 10 the decimal of \(\int_1\), of \(\int_100\) and of \(\int_200\)1.
- (7) 10 0z. 11 dwts. 214grs, to the dec. of 1th, Trov: and of 1th Avoir.
- (8) 9 cwt. 13lbs. 4 oz. 3'84drs. to the dec. of a ton; 4 cwt. 1qr. 104lbs. to the dec. of 1 cwt.; 17cwt. 3qrs. 17lbs. 87 oz. to the dec. of a ton.
- (9) 12hrs. 55min. 231'sec. to the dec. of a day; 5 days 12hrs. 25min. 37'92 sec. to the dec. of a week; 1 cwt. 3 qrs. 4 lbs. to the dec. of a tou.
- of a ton.
 (10) 11yds.; 3 fur. 66yds. and 6yds. 2 ft. 74in. each to the dec. of a mile.
- (11) '002 of 2'75 pag. to the dec. of Rs.3'46; 4 inds. Ssr. 1\(\)ch. to the dec. of 14mds.; 3 sr. 4 ch. 2 to. 11 m. to the dec. of 1 md.
- (12) 6 fur. 100 yds. 2 ft. 3 in. to the dec. of a mile; 3 ro. 31 po. 16½yds-to the dec. of an aere; 13cub. ft. 1323 cub. in. to the dec. of a cub. yard.

383. To multiply or divide a quantity by a decimal, or to find the value of a decimal of a quantity.

RULE. (1) Express the given quantity, when necessary, as a simple quantity, and perform the required operation; or (2) reduce the decimal to a fraction in its lowest terms, and proceed as in fractions. (Arts. 302 and 303.)

Note. When the decimal is recurring and the value is required to be exact, the second method is advantageous.

Ex 1. Find the value of '432 of Rs.6. 10a. 8p.

- (1) Rs.6. 10a. 8p. × 432 = 1280p. × 432 = 552 96p. = Rs.2. 14a. 0 96p.
- (2) '432 of Rs.6. 10a. $8p = \frac{480}{1000}$ of Rs.6. 10a. $8p = \frac{6}{12}$ of Rs.6. 10a. $8p = \frac{1}{12}$ of Rs.360 = Rs.2 $\frac{2}{3}$ = Rs.2. 14a. 0.96p.

Ex. 2. Find the value of 42345 of £2. 15s. 42345 of £2. 15s. = 43836 of £2. 15s. = 4380 of £2. 15s. = £2. 15s. × 4+£2. 15s. × $\frac{1}{2}$ 8 = £11+55s. × $\frac{1}{2}$ 8 = £11+127s. = £11. 12s. 108d Ex 3. Find the value of 3.3 qt 44 of 1 sq. ft. 3 kg in. Value required = $3\frac{a}{5}$ of $\frac{4\frac{a}{5}}{5}$ of $1\frac{a}{14}$ sq. $4\frac{a}{5} \times 3\frac{a}{5} \times 4\frac{a}{5} \times 3\frac{a}{5} \times 3\frac{a}{5} \times 3\frac{a}{5}$ isq. ft.

= 1.9 × 1.9 × 22.2 × 12 sq. 4t = 37.9 sq. 4t. = 20% sq. ft. = 20 sq. ft. 80 sq. m.

Ex. d. Find the value of 2:86805 of Re. 1. 8a. + 83 of Rs. 2 - 1:8. of Rs.2. Sa.

2.86805 of Re. 1. 8a. = 277125 of Re.1. 8a. = 2727 of Re.1. 8a. $= Re.1. 8a. \times 2 + Re.\frac{6}{2} \times \frac{12.5}{14.1} = Rs.3 + Re.1, 4a. 10p.$

= Rs.4.4a.10b.'83 of Rs.2= \$5 of Rs.2= 5 of Rs.2= Re.5 = Re.1, 100. 8p.

1.8 of Rs.2. $8a = \frac{18}{10}$ of Rs.2\frac{1}{3} = \frac{18}{5} \times Rs.\frac{5}{3} = Rs.\frac{5}{3} = Rs.4. 8a. ... value required = Rs.4. 4a. 10p. + Re.1. 10a. 8p. - Rs.4. 8a. = Re.1. 7a. 6b.

Examples CXVI.

- 1. Find the values of :-
- (1) 1'85 of Re.1. 10st. 8p.; 2'375 of Rs.6. 10st. 8p.; '775625 of Rs.50.
- (2) '925 of 6s. 8d.; '7365 of 6s. 8d.; '59375 of 19s. 4d.; '78125 of £6.
- (3) '00390625 of £1. 12s.; '0474609375 of £10, 13s. 4d.; '07 of £2. 10s. (4) 6'156510416 of Rs.40; '001953125 of Rs.400; 1'46875 of 3 bighas.
- (5) '046875 of 1 md. 8 sr.; 4'106 of 4 mds. 32 sr. 8 ch.; '045 of 4 miles.
- (6) '7385 of 135, 4d. ; 1'625 of 2 tons 4 cwt. ; 27'138 of 2 mi. 450 vds.
- (7) '3792 of £3, 18s, 11d, 10013 of £3, 17s, 101d; 1365 of £1, 0s, 10d.
- (8) £3. 14s. 63d. × 2.46875; £874. 13s. 4d. × 1.875.
- (9) £1205. 6s. 8d. +51°2; £503. 12s. 63d. +26°312.
- (10) Rs.47, 13a, ×24,5775; Rs.140, 5a, ×34,567; Rs.230, 9a, 6b, +13,53.
- (11) '2775 of 1 sq.yd. 3 ft. 72 in.; '9765625 of 2 tons 18 cwt. 3 grs. 14ths. (12) 225 days 14 hrs. 36 min. +8.71846; 27lbs. 130z. 15 drs. × 4352.
 - 2. Find the values of :-
 - (1) '5 of Rs.2. 6a. 4'8p. ; 3'06 of Rs.2. 1a. ; '3 of Rs.3. 8a. 4p.
 - (2) 714285 of 10s. 6d.; 428 of £3. 8s.; 379583 of Rs.8. (3) 348i of £4. 18s. 8d. ; 40099 of Rs. 16. 13a. 4p. ; 00015740 of Rs. 81.

- (4) '53\$7142\$ of 2 cwt. 3qrs. 17\{\}\) lbs.; 13'26\{\}79\{\}\\$ of 3 mi. 7 fur. 22\{\}\) po.
 (5) '208\{\}\\$ of '3\{\}28\{\}7\{\}\\$ of 2 b cwt.; 1'016 of 8s.; 3'07 of 11s. 3d.;
- 3'242' of $7\frac{1}{2}$ bighas ; 3'6 of 4 qrs. 4 bus. (6) '846153' of 'o8' of £8.6. 8a. ; 'oi × 'ioi of £8.749. 4a. ; 'i × '47' of
 - Rs.3601. 2a.; 4694 of Rs.5. 3a. 2p.

 3. What is the value of 234, when the unit is worth £20, and
- 3. What is the value of '234, when the unit is worth £20, and the worth of '3 of '3, when the unit is valued at Rs. 108?
 - 4. What is the value of '583, when the unit is 3 oz. 5 dwts.?
 - Find the respective values of :—
- (1) '45 of Rs.35+'75 of Rs.2. 5a. 4p.+3'245 of Re.1. 10a. 8p.
- (2) 871875 of 5a. 4p.+1146875 of Rs.3. 5a. 4p.-0625 of Rs.10. 8a.
- (3) '375 of a guinea+'1875 of a crown+'3 of 7s. 6d.-'875 of 2d.
- (4) '5s. +'7 of a crown + L'125; L'6+'3125s. +'2 of a guinea.
- (5) 1°125 of Rs.13, 8a,+44°045 of 7a, 6p,-°0625 of Rs.3, 12a,+1°025 of 2a, 6p,-2°56 of Rs.5, 7a, 6p.
- (6) '175 of 28 mds. + '195 of 1 md. 16 sr. + '145 of 14 sr. + '15 of 8 ch.
- (7) '625 of £1. 1s. + '54 of 8s. 3d. + '027 of £2. 15s.
- (8) 7 of 7s. 6d. 84 of 16s. 6d. + 927 of £2. 10s. 5d.
- (9) 285714 of £30+£6.857142+6 of 714285 of £6+1.3 of 42857\$s.
- (10) 857142 of 20625 tons + 571428 of 3'375 cwt + 714285 of 1'25 qrs. + 285714 of 10'5 lbs.
- 384. To find what decimal one compound concrete quantity is of any other of the same kind.
- Rule. Express the first quantity as the fraction of the second , as in Art. 300, and then reduce this fraction to a decimal.
 - Ex. 1. Reduce 3s. 11\frac{1}{2}d. to the decimal of £1. 19s. $4\frac{1}{2}d.$ 3s. $11\frac{1}{2}d. = 47\frac{1}{2}d.$ and £1. 19s. $4\frac{1}{2}d. = 472\frac{1}{2}d.$
 - $473d + 4721d = {}^{1}3^{9} \times {}^{9}3^{2} = {}^{1}6$; ... the reqd. decimal= 1. Ans.
- Ex. 2. Express $\frac{3}{2}$ of Rs.3. 12a+625 of Rs.5-545 of Rs.4. 9a. 4ϕ . as the decimal of Rs.100.
 - $\frac{3}{8}$ of Rs.3. $12a = \frac{3}{8} \times 60a = 22\frac{1}{2}a = Re.1$. 6a. 6p.
 - '625 of Rs.5=Rs.3'125=Rs.3. 2a.
 - '545 of Rs.4. 9a. $4p.=\frac{6}{3}\frac{1}{3}$ of $73\frac{1}{3}a.=\frac{6}{11}\times\frac{9}{3}$ of a.=40a.=Rs.2. 8a.

: the first quantity = Re, 1. 6a. 6p. + Rs. 3. 2a - Rs. 2. 8a. = Rs. 2. 0a. 6p. = Rs. 2 $\frac{1}{2}$ 2.

, the reqd. decimal = 2,1/2 + 100 = '0203125. Ans.

Examples CXVII.

1. In the following Examples, reduce the first of the two given quantities to the decimal of the second :--

(1) Rs.11, 2a, 2p, ; Rs.178, 2a, 8p. (2) Rs.12, 0a, 6p, ; Rs.25, 7a

(3) Re.1. 11a.; Rs.2. 8a. (4) Rs.2. 13a. 10p.; Rs.50.

(5) 5s.; 13s. 4d. (6) 13s. 6\(\frac{1}{2}\)d.; 15s. 6d.

(7) £3. 6s. 8½d.; £7.·10s. (8) 3½ guineas; £2. 15s. 5½d. (9) 1½d.; 7s. 10½d. (10) 7s. 8·1942d.; 15s. 9d.

(11) £ of tos : 13s. 4d. (12) ₹ of 2s. 6d. : € of 18 guineas.

(13) 3'45 of 10s, 6d.; half-a-crown. (14) '0527 of £1. 7s. 6d.; 13s. 4d.

(15) 3 hrs. 26 min. 37 sec.; 13 days 20 hrs. 23 min.

(16) 1 cwt. 2 qrs. 31 lbs.; 1 ton 4 cwt. 1 qr. 24 lbs.

(17) 10 lbs. 11 oz. 12 dwts. 7 grs. ; 9 lbs. 8 oz. Avoir.

(18) 5 ac. 3 vo. 15 po. ; t ac. 2 ro. 32 po.

(19) 31 of £4. 15s. 4d.; '27 of 16s. 3d. (20) 2 sr. 4 ch.; 1 md. 8 sr.

(21) 243 of £2. 6s. 54d. ; £18. 17s. 104d.

(22) '101 of 1 lb. 5 oz. ; 1 of 1 qr. 22 lbs. 8 oz.

(23) 1 bi. 11 k. 8 ch. ; 16 k. 14 ch. (24) 1 md. 3 sr. 8 ch. ; 1 md. 16 sr.

2. Express 3s. 5211 d as the decimal of a dollar of 4s. 12d.

3. Express £5:456 as the decimal of a rupee of 1s. 10d.

Express 375 of a guinea+1 of a crown+3 of 7s. 6d.-2 of 2d. as the decimal of 16s.
 Find the value of £0375+625s.+75d.+2s. 35d and reduce

the result to the decimal of 7s. 6d.

6. Find the value of 246 of Rs.4. 10a + 259 of Rs.12. 8a.

6. Find the value of 240 of Ks.4. 104 +259 of Ks.12. 84 + 02 of Ks.33. 124. and reduce the result to the decimal of Ks.30.

7. Find the value of $\frac{3}{4}$ of $\frac{1}{9\frac{1}{2}}$ of £1. 18s. $+\frac{3}{8}$ of .375 of 15s. $+\frac{3}{8}$ of .439 of 8s. 3d. and express the result as the decimal of £5.

8. Express $\frac{3}{8}$ of 12s. 6d. + 625 of 7s. 6d. - 505 of 16s. 6d. as the decimal of £1.

9. Express £874. 13s. 4d. x 3 75 as the decimal of £1000.

- What decimal of a crown is the difference between 6½ halfguineas and £3.525?
- Express the difference between '378 of 13s. 10½d. and '378 of 16s. 6d. as the decimal of '426 of £1. 17s. 6d.
- 12. Express £'9+27s.+3'6d as the decimal of £(2-'2) +(6-'6)s.+(8-'8)d.

XVI. APPROXIMATION.

- 385. I thas already been shewn in Art. 551, that in converting a vulgar fraction to a decimal, where the division does not terminate (which is often denoted by dots (...) placed at the end of the quotient, an approximation to its true value can always be found to any degree of accuracy). Thus \(\frac{1}{2} = 29111764 \). If we wish to approximate to the result of the result of
- 886. The reason for the above is obvious from the following considerations. If we take '29412 to represent '2941764..., instead of '29411, it is clear that '29412 is greater, and '29411 less than the true value of the decimal; but '29412 is greater than the true value by '00000236... and '29411 is less than the true value by '00000236... and '29411 is less than the true value by '00000236...

Now '00000236...is less than '00000764...

Therefore '29412 is nearer the true value than '29411.

387. Contracted Addition and Subtraction. These methods have already been explained in Art. 369.

- 388. Contracted Multiplication. In multiplying one long defined by another, it is generally required to get the product approximately correct, i.e. as far as a certain decimal place. The following Rule enables us to shorten the work.
- RULE. Mark off in the decimal part of the multiplicand as many figures as is one more than the number of decimal places we are required to retain in the product: under the last of these marked figures place the unit's figure of the multiplier, writing, the figures is a reverse order. Onto decimal points of both the multiplicand and that every figure of the multiplier shall have a figure above it. Begin the multiplication with the right-hand figure of the multiplication with the right-hand figure of the multiplication with the product with the second point of the multiplication from the figure above the one we are multiplying the multiplication from the figure above the one we are multiplying to the more after for mis product with the next in the same vertical line; add as usual, and mark off the required multiple of the product in the same vertical line; add as usual, and mark off the required number of decimal places in the result; striking out the last figure.

Note. In carrying the nearest ten, if the product is a number from 5 to 14 carry 1; from 15 to 24 carry 2; from 25 to 34 carry 3; from 35 to 44 carry 4; and so on. If the product is 4 or less than 4, reject it. (Art. 385.)

Ex. r. Multiply 459'63524 by 25'4637, retaining 3 places; 20040635 by 241'6358, retaining 6 places; and 453 by 01694,

(1) 4596352,4 736452	(2) 4063,50 8536142	(3) 4530,0 496100	
91927048	812700	453	
22981762	162540	272	
1838541	4064	41	
275781	2438	2	
13789	122	*00768	
3217	20		
11704.0138	3	for '01694 may	be written
	20081889	* as 0.01604.	

Ex. 2. Multiply 3'2567834 by 4'2089542, retaining 7 places, and 4'82'357 by '0785, retaining 6 places of decimals.

(2) 18235723.57 (1) 325678340

389. Contracted Division. In dividing one decimal by another where the quotient is required to be approximately correct only to a certain number of decimal places, we use the following Rule:—

RULE. Make the divisor a whole number; and determine first of all—by inspection or by taking one step in the ordinary way—the highest number of integral figures in the quotient, and then the whole number of figures in the quotient; from the left of the divisor cut off this number of figures, and one more for approximation; and strike out the rest. Proceed one step with this new divisor, but in multiplying its first figure the quotient figure, cuty proceedings of the property of the propert

If the number of figures in the divisor, be less than the number of figures to be cut off, proceed in the ordinary way until the number

of figures still to be found in the quotient is one less than the number of figures in the divisor, and then apply the Rule-Ex. 1. Divide 2508:928065051 by 92:410357 approximately cor-

rect to 4 places of decimals.

9,2,4,1,0,3,5)2508928065051(27:1408

Making the divisor a whole number, we find by inspection that there will be 2 figures in the integral part of the quotient; and 4 places of decimals are to be retained. Hence, 6 figures are retained in the divisor and 1 more for approximation, so that the divisor is 924103.5. In the next stage the divisor is 02410.3; 3 being retained for approximation, and so on.

Ex. 2. Divide 257917 by 2'03458 approximately correct to 7 places of decimals.

2,0,3,4,5,8)25791.70(1267667 203458

14

Here, by inspection, we find that the quotient will contain no integral part : and as 7 places of decimals are to be retained, the divisor must consist of 8 figures, with 1 for approximation. But as there are only 6 figures in the divisor, proceed in the usual way of division for 2 figures in the quotient, when the number of figures still to be obtained will be one less than the number of figures in the divisor. Then apply the Rule.

Ex. 3. Divide '549532676 by 931'2167, retaining 7 places of decimals.

9,3,1,2,1)5495'32676('0005901

46561 8392

By inspection, we determine that there will be 3 ciphers after the decimal point in the quotient; hence only (7-3) or 4 figures are required in the 11 quotient. Therefore we retain 5 figures in the divisor, one for approximation.

390. Series. The value of a Series is frequently required to be obtained correct to a certain number of decimal places. In such cases proceed as in the following Examples.

Ex. 1. Find the value, correct to 7 places of decimals, of $1 + \frac{1}{1.2} + \frac{1}{1.2.3} + \frac{1}{1.2} \frac{1}{3.4} + &c.$

The next and the following terms need not be considered, as they will all give o's only up to the 7th decimal place.

Ex. 2. Find the value, correct to 5 places of decimals, of

 $\frac{1}{16} + (\frac{3}{16})^2 + (\frac{3}{16})^3 + (\frac{3}{16})^4 + \dots$ to infinity. Let s denote the sum of the given series.

Then $s = \frac{s}{16} + (\frac{s}{16})^2 + (\frac{s}{16})^3 + (\frac{s}{16})^4 + \dots$

 $\binom{1s}{s} - 1$ s = 1; or $\binom{1s}{s} s = 1$; $s = \binom{1s}{s} = \frac{23076}{5}$.

Ex. 3. Find the value, correct to 7 decimal places, of

$$\frac{1}{3\cdot5} + \frac{2}{3^2\cdot5^3} + \frac{3}{3^3\cdot5^5} + \frac{4}{3^4\cdot5^7} + &c.$$

Let s denote the sum of the series.

then
$$s = \frac{1}{35} + \frac{2}{3^2.5^3} + \frac{3}{3^3.5^5} + \frac{4}{3^4.5^7} + &c.$$

$$\therefore \frac{1}{3.5^2} s = \frac{1}{3^2.5^3} + \frac{2}{3^3.5^5} + \frac{3}{3^4.5^7} + &c.$$

By subtraction, we have

$$\left(1 - \frac{1}{3 \cdot 5^2}\right) s \text{ or } \frac{74}{75} s = \frac{1}{3 \cdot 5} + \frac{1}{3^2 \cdot 5^3} + \frac{1}{3^3 \cdot 5^5} + \frac{1}{3^4 \cdot 5^7} + \&c.$$

$$\vdots \frac{74}{5^5} s \times \frac{1}{3 \cdot 5^2} = \frac{1}{2^3 \cdot 5^3} + \frac{1}{3^3 \cdot 5^2} + \frac{1}{3^4 \cdot 5^7} + \&c.$$

Again, by subtraction, we get

$$\frac{74}{75}$$
s × $\left(1 - \frac{1}{3 \cdot 5^2}\right) = \frac{1}{3 \cdot 5}$, or $\frac{74}{75}$ s × $\frac{74}{75} = \frac{1}{15}$.

$$: s = \frac{75 \times 75}{74 \times 74 \times 15} = \frac{375}{5476} = \frac{.0684806...}{.0684806...}$$

391. Abbreviated method of dividing a number by 9, 999, &c.

RULE. Point off in the dividend as many decimal places (counting from the right) as there are nines in the divisor; then again twice as many decimal places, next three times as many, and so on. Then add these several numbers as in Addition of Decimals. The integral part will give the quotient and the recurring part the remainder.

Ex. Divide 578921 by 99 by the abbreviated method.

$$\begin{array}{lll} 5789\,21 & 5789\,21 \times p_0^2 = 5789\,21 \times p$$

Hence the quotient is 5847 and remainder 68.

Examples CXVIII.

290	MATRICULATION ARITHMETIC.
	52'687640812 by 18'703216231 retaining 6 places of decimals. 1'050625 by itself

(9)	$5 \times \left\{1 - \frac{1}{50} - \frac{1}{2 \times (50)^2} - \frac{1 \times 3}{6 \times (50)^3} - \frac{1 \times 3 \times 5}{24 \times (50)^4}\right\}$
	$-\frac{1\times3\times5\times7}{120\times(50)^5}$ -&c. to inf. to 5 places of decimals.
(10)	$\frac{2}{5} + \frac{4}{5^3} + \frac{2}{5^3} + \frac{4}{5^4} + \frac{2}{5^5} + \frac{4}{5^6} + &c$ to infinity.

- 4. Divide (by the abbreviated method) :-
 - (1) 2916438 and 75061382 separately by 9.
 - (2) 51647901 and 7204561 separately by 99.
 - (3) 7204561 and 580844 separately by 999.
 - (4) 591608 and 7391684 separately by 9999.
 - (5) 236916 by 9999 and 720532876 by 99999.

Examples worked out.

Ex. 1. A man owns is of a house, and sells '1351 of his share; what fraction of the house does he still own?

He sells '1351 of A=1348 of A= 34 of A...

... he has left $(1 - \frac{1}{2}A_1)$ of $\frac{1}{4} = \frac{1}{2}A_2$ of $\frac{1}{4} = \frac{1}{2}A_1$. Ans.

Ex. 2. A vessel's cargo, 3 of which is worth £6666'6, gets

damaged, and the owner in consequence sells 83+70416 of it for half the original value of the whole cargo. What is the value of the remainder at the same rate and what the loss on the whole cargo?

The whole cargo is worth $\frac{4}{3}$ of £66666 = £9999 = £10000.

He sells
$$\frac{.83333...+.04166...}{1.05} = \frac{.8740}{1.05} = \frac{.875}{1.05} = \frac{.875}{1.05} = \frac{.875}{0.050} = \frac{.875}{...}$$

.. he has remaining (1-2) or 1.

Now since 4 of the cargo sells for 1 of £10000 = £5000;

... & of the cargo must sell for & of £ 5000 = £ 1000. Hence $loss = f_1(10000 - 5000 - 1000) = f_14000$.

Ex. 3. A woman had a certain number of eggs; she sold '25 of the number and 3 more to one person, '375 of the remainder to a second, and 6 of what still remained to a third, when she had only 15 left. How many had she at first.

After selling '6 or \(^2\) of the second remainder, she had (1-\) or \(^3\) of the eggs left. Therefore \(^3\) of the second remainder=15; \(^3\) the second remainder=15 × 3=45.

Again, '375 or # of the first remainder being sold, # remained; ., & of the first remainder=45; , the first remainder=45 × 5=72.

Next, after selling '25 or 2 of what she now had and 3 more, she had 72 left; ... 2 of the number = 72 + 3 = 75.

the whole number of eggs=75 x 4=100.

Ex. 4. A owns 583 of an estate and B the rest. If \$ of Bs share is Rs. 5000 less than A's, what is the worth of the whole estate? Since A's share= \$ 25 or 12 of the estate;

Bs share $=(1-\frac{7}{12})$ or $\frac{7}{12}$ of the estate. 0 of Bs share $=(\frac{7}{6}\times\frac{7}{12})$ or $\frac{1}{2}$ of the estate; and the difference

of their shares $= (\frac{1}{2} - \frac{1}{4})$ or $\frac{1}{3}$ of the estate. Therefore $\frac{1}{2}$ of the estate = Rs.5000;

Therefore $\frac{1}{3}$ of the estate = Rs.5000; the whole estate = $Rs.5000 \times 3 = Rs.15000$.

Miscellaneous Examples IV.

1. Find the sum, difference, product and two quotients of $30^{\circ}33$ and 0337; and find the sum of all the results.

2. Reduce $(\frac{1}{2})$ of $2\cdot 45 - \frac{1}{160}$ of 02 + 1000 to a decimal. 3. Find the sum of $3\cdot 102 + 00071 + 5\cdot 876 + 1\cdot 2 + 31907 + 027 + 1000$

310'68+'0000743+38'691+'1041457.

4. Which is the greater, '39 of a guinea, or '4009 of £1?

5. Divide the sum of 8'25 and 4'125 by their difference.

6. Divide the product of 1'075 and '0101 by '43.

 Divide the difference between 3 1047 and '0731 by the sum of 1'27 and 11'384.

 If '3 of an estate is sold for Rs. 4504, find the value of '48 of it at the same rate.

 A man, who possesses 27 of a ship, sells 416 of his share for Rs. 32400; what is the ship worth?

10. In a school of 200 children there are 4 classes, of which the first contains '24, the second '36, and the third '18 of the whole; of how many does the fourth class consist?

 If 6 of the number of apples in a basket exceeds 6 of the number by 57.4; find the number of apples.

12. Divide 8'064 by '846+ 19' of '2916.

Divide 1.3 of 1.50 by 0.624 of 25.92.

14. A butcher bought an equal number of calves and sheep for £265; for the calves he gave £375 a head, and for the sheep £2875 a head; how many did he buy of each kind?

15. A gentleman having given 5 of the money in his purse for a horse, and 375 of the remainder for a sheep, had £1.6875 still left: what sum had be at first?

 Divide Rs.870 between A, B and C, so that '75 of C's share shall='5 of A's='ô of B's.

17. A coal-dealer bought 198 inds. of coal for Rs.32 5875, of which he sold 100 mds. for Rs. 2375 a maund. At what price per seer must he sell the remainder so as to gain Rs.21875 by his barrain?

18. A had Rs.2568. IIa. 4p, which was Rs.431 885416 less than 6 of 7 of 2.5 times B's money. How much money had B?

19. How many oranges at £'084375 a dozen ought to be given or 378 eggs at '0625s. each ?

20. What number must be subtracted from the product of 9'27 and 8'0003 to give the sum of 19, 27'9652, '003, 5'0267 and 17'09?

21. A has shares in an estate to the amount of '25 of it and of '36 of it. B has shares in the same estate to the amount of '2572 of it, ind the difference in value between the properties of A and B, when '36 of the estate is worth Rr.50000.

23. Divide 9.614 by 10000019 and $\frac{2\frac{1}{5}}{5\frac{1}{2}}$ by 10003 and multiply the sum of the quotients by 10005.

23. Express the value of
$$\frac{133\frac{1}{7}}{83\frac{1}{9}} + \left(1 + \frac{2}{3 + \frac{4}{5 + \frac{6}{7}}}\right)$$
 of a rupee in

decimals of £1, when the value of the rupee is 1s. 51d.

24. Simplify 0576 × 1.97 + 142857 + 21 + 0454864.

25. Divide 1001 by 390625; 1001 by 000390625 and 1001 by 390625. Multiply 118 by 538461.

26. Find the value (to three places of decimals) of

$$1 + \frac{1}{4} + \frac{1 \times 3}{1 \times 2} (\frac{1}{4})^2 + \frac{1 \times 3 \times 5}{1 \times 2 \times 3} (\frac{1}{4})^3 + \frac{1 \times 3 \times 5 \times 7}{1 \times 2 \times 3 \times 4} (\frac{1}{4})^4 + &c. to infinity.$$

27. Simplify:-

$$\frac{3 \cdot 3}{600625} \text{ of } \frac{9.7}{2.42} + \frac{2.5}{109} (7.25 + 2.75) \times \underbrace{\text{£3. 6s. 8d.}}_{\text{£10. 13s. 4d.}} \cdot \frac{3}{3} \cdot \frac{6s. 8d.}{600. 13s. 4d.}$$
28. Subtract on from od and divide the result by 102.

28. Subtract 03 from 03 and divide the result by 102.

29. Find the value of 016 of Rs.260. 2a.6p. + 35i of Rs.13.

14a. + 1 00033 of Rs.7. 14a. 3p.

30. Find how much more than 0338184 of 116 of 6 of 587 of

Rs. 52. 1a. 4p. I need to pay a bill of Rs. 21. 4a.
31. A person owns 4% of an estate, and sells 3\$71428 of his

share; what part of the whole estate has he still left?

32. A and B can do a piece of work in 1575 days, B and C can do it in 186 days, and A and C in 163 days. In what time would

A, B and C singly perform the whole work?

33. There is a number which, when multiplied by 4'255 and divided by cote, gives \$51; find the number.

- 34. Show that, whether the value of $3\frac{1}{4} + 4\frac{2}{5} 5\frac{1}{2} + 16\frac{6}{5} \frac{1}{2}\frac{1}{4} + 10$ - $14\frac{3}{5}$ be found by vulgar fractions or by decimals, the results coincide.
- 35. The owner of 375 of a mine sold 6 of his share for Rs.25200; find the value of 875 of the mine.
- 36. A cistern of water lost 12 of its contents by leakage, then 26 gals. were drawn off, and it was then 75 full; how many gals. did it contain at first?
- 37. In a cricket match, one side of 11 men made a certain number of runs, one player obtained 25 of the number, each of three others 1, each of two others 0625, and the rest 39 amongst them; find the whole number of runs.
 - 38. Reduce to their simplest forms :-

(1)
$$\frac{905}{\frac{1}{15}} \frac{49\frac{1}{1}}{6} + \frac{1}{\frac{2}{1}} \frac{49\frac{1}{1}}{6} + \frac{1}{2} \frac{1}{10}$$
. (2) $70\frac{4}{5}$. (3) $\frac{4}{10} - \frac{1}{10}$.

- 39. Five bells which toll at intervals of 1.2, 1.5, 1.75, 1.8, 2.1 seconds respectively, begin tolling simultaneously; how long after will they all toll simultaneously again?
- 40. Reduce £24. 16s. 4\frac{1}{2}d. and £167. 10s. 6\frac{1}{2}d. \frac{1}{2}y. to decimals of the same denomination, so as to find how often the former is contained in the latter.

41. Find the value of
$$\frac{09318}{.5681}$$
 of $2\frac{7}{18}$ of 2.5 days.

- 42. A woman has a certain number of eggs; she sells 3 of the number and one more to one person, 3 of the remainder to a second person, and 5 of the remainder to a third person; after these sales she has 15 eggs left. How many had she at first?
- 43. A clerk copied '55 of Rs.50 instead of 5'5 of Rs.50; what was the amount of the error?
- 44. From a rod 2'078 miles long, portions are cut off each equal to '0037 of an inch, how many such portions can be cut off and what will be the remainder?
- 45. Express the sum of $\frac{5}{27}$ 1428 of a vis, $\frac{3}{8}$ of $\frac{1}{3\frac{1}{8}}$ of $\frac{3}{8}$ of a maund and $\frac{3}{10}$ of a cwt. as the decimal of 1 ton. (a vis=3lbs. 2 oz. : one maund=822lbs. Avoir.)
- 46. The difference in the values of the two shares into which a certain property is divided is \$\tilde{K}_2\tilde{K}_2\tilde{K}_2\tilde{F}_3\ti
- 47. A has an income=('6 of 83+3'5) of B's income. If A after spending Rs.645 per annum, find that he has exceeded his income by 075 of it, find B's income.
- 48. A can reap 4 of a field in 26 days and B can reap 6 of it in 45 days; A and B work together till they have reaped 75 of

the field. A then leaves, and B completes the work. If A earn A:2. 8a: a day, what ought the reaping of the field to cost?

49. Out of a bag of silver, I take Rs.25 more than '5 of the whole sum which it contained; then Rs.15 more than '2 of what then remained; and then Rs.10 more than '25 of what then remained; after this Rs.5 remained. What did the bag contain at first?

50. A has shares in an estate to the amount of '15+'36 of it, B has shares in the same estate to the amount of 472 of it; find the difference in value between the properties of A and B, when '056 of the estate is worth £373'3.

CHAPTER VII.

Rules of Practice and Invoices.

392. We shall here shew how the primitive fractions, as defined in Art. 238, may be applied to the practical calculation of prices, when the price of a unit of any denomination is supposed to be given; and the tediousness of the amendations of the rules at length, will be a sufficient excuse for the mere tradications of the processes to be employed, by means of examples.

393. An aliquot part of a number is such that we may make up the number by taking the part a certain integral number of times. Its relation with the whole can therefore be expressed by a fraction which has unity for its numerator and an integer for its denominator.

Thus, 5a. 4b., being \(\frac{1}{3} \) of Re.1, is an aliquot part of a rupee; 10s., being \(\frac{1}{2} \) of \(\frac{1}{2} \)1, is an aliquot part of a pound.

^{394.} Practice is a short method of finding the value of any quantity by means of *aliquet parts*, when the value of a unit of any denomination is given. It is therefore another method of solving questions in *Combatual Multiblication*.

It is Simple Practice, when the value of one unit of a certain denomination is given, and the value of a number of these units is

^{395.} Practice may be either Simple or Compound.

required; but in *Compound Practice*, the given quantity is not wholly expressed in the same denomination as the unit whose value is given.

Thus, to find the value of 350 articles at 15a. 8p. each is Simple Practice; and to find the value of 14 mds. 15 sr. 7 ch. at Rs.2. 5a. 8p. per maund is Compound Practice.

I. SIMPLE PRACTICE.

396. The RULE for Simple Practice will be best understood by the following Examples.

Ex. r. Find the value of 1298 things at Rs.8. 14a. 6p. each. If the cost of a thing be Re. 1; then the total cost is Rs.1298.

Note 1. It is generally most convenient, when possible, to use the *aliquot part* of the denomination next superior to the highest denomination of the price proposed.

Here, Rs.8. 14a. 6p. is less than Rs.9 by 1a. 6p. Hence the calculation may be shortened thus:—

1a. = $\frac{1}{16}$ of Re.1 | Rs.1298. oa. op. = price at Re.1 each.

$$6/k = \frac{1}{3}$$
 of 1a.
 $R_{K,11682}$ o $R_{K,81}$ 2a = price at $R_{K,9}$ each.
 $R_{K,40}$ 9a = price at $R_{K,9}$
 $R_{K,11560}$ 0 = price at $R_{K,9}$
 $R_{K,11560}$ 0 = price at $R_{K,9}$

Ex. 2. Find the cost of 345 things at £3. 17s. 104d each.

Otherwise thus: -As £3. 17s. 10½d, is the difference between £4. and 2s. 1½d, we can simplify the process thus:-

Note 2. Sometimes by introducing a *subsidiary* aliquot part, we can easily find the required aliquot part; thus, taking the preceding example, we have

2. =
$$\frac{1}{10}$$
 of £1. $\frac{4}{345}$ o o = cost at £1 each. $\frac{1}{9}d$ = $\frac{1}{9}$ of 6d. $\frac{3}{8}$ $\frac{1}{10}$ o = cost at 2.5 $\frac{3}{10}$ 1 $\frac{1}{10}$ = cost at 1 $\frac{1}{10}$ d..... $\frac{3}{10}$ = cost at 2.5 .1 $\frac{1}{10}$ d..... $\frac{3}{10}$ = cost at 2.5 .1 $\frac{1}{10}$ d....

Ex. 3. Find the value of 456°_{1} mds. at Rs. 8. 5a. top. per maund. Since $Re.^{\circ}_{2} = 10a$, the cost of 456°_{1} mds. at Rs. 1 is Rs. 456. 10a.; we therefore proceed as before, thus:—

Rs.3819 7 73 = value @ Rs.8. 5a. 10p. each.

Ex. 4. Find the cost of 2864\(^2\) cwt. at 9s. 10\(^3\)d. per cwt. Since \(^2\)\(^2\) would introduce a fraction of a farthing, it will be better to find separately the cost of 2864 cwt. and of \(^3\) of a cwt. and then add.

	1 6.	s.	d.		s.	d.
$5s = \frac{1}{4}$ of £1 $4s = \frac{1}{8}$ of £1 $10d = \frac{1}{8}$ of 5s.	2864	0	٥	=cost @ £1 each.	9	104
45. 5 of £1	716	0	0	= cost @ 5s		3
10a. = 1 01 5s.	572	16	0	= cost @ 4s	7)20	81
6d. = 10 of 5s.	119	6	8	= cost @ 10d	- 4	2#5
	71	12	ø		**	-28
\$d.= \$ of 6d.	8	19	o	= cost @ \d		
£ .	£1417	- 1	8	=cost @ 9s. 104d. ea	ach.	
CALL .		4	28	= cost of 7 of a cwt.		
4	£1417	5	102	= cost @ 9s. 103d. p	er cwt.	

Ex. 5. Find the price of 2108 cwt. of sugar at £1. 6s. 28d each.

	1 £.	5.	d.	
4s. = 1 of £1		0	o = price at £1 each.	
2s. = 1 of 4s.		12	o = price at 4s	
2d = 12 of 2s.		16	o = price at 25	
d = of 2d	17	11	4 = price at 2d	
$\frac{1}{4}d = \frac{1}{2}$ of $\frac{1}{4}d$	2	3	11 = price at \(\frac{1}{4}d\)	
	1	I	111 = price at \(\frac{1}{2}d. \)	
	£2761	- 5	2) = price at £1. 6s. 22d. each.	

Examples CXIX.

Find by Practice the values of the following articles :-

1.	3467 at 2 <i>a</i> . 6 <i>p</i> .
3,	1448 at 10a. 8p.
5.	2370 at 13a. 4p.
7.	1250 at 2s. 34d.
9.	7351 at 14s. 9\d.
11.	1600 at Rs.2. 5a. 6p.
l3.	632 at Rs. 14. 5a. 6p.
15.	1298 at 17s. 94d.
17.	2937 at £2. 11s. 10]d.

13.	632 at Rs.14. 5a. 6p.	
15.	1298 at 17s. 94d.	
17.	2937 at £2. 11s. 10]d.	
19.	412 at £5. 14s. 5\d.	
21.	295 at Rs.5. 11a. 73p.	
23.	3546 at £5. 15\$. 7\$d.	
25.	1449\$ at Rs. 11. 6a. 6p.	
27.	1128? at Rs.2. 15a. 11p.	

II. COMPOUND PRACTICE.

397. The RULE for Compound Practice will be easily shewn by the following Examples.

Ex. 1. Find the value of 8mds, 6sr. 12ch, at Rs.5, 6a, 8th, per md.

Ex. 2. What is the price of 3 cwt. 2 qrs. 16 lbs. at £3. 7s. 8d. per cwt.?

Ex. 3. Find the value of 11 mds. 4 sr. 8 ch. at Re.1. 14a. 4p. per seer.

Rs.842 II 2=value of 11 mds. 4sr. 8ch.

Ex. 4. Find the value of 365 mds. 37 sr. 8ch. at Rs.126. 6a.

86. per mannd.

20 sr. = 1 of 1 md.	Rs. 126	a. 6	%. 8=value of 1 md.
			10
	1264	2	8=value of 10 mds.
			10
	12641	10	8=value of 100 mds.
			3
	37925	0	o=value of 300 mds.
	7585	0	o=value of 60 mds.
	632 63	1	4=value of 5 mds.
10 sr. = 1 of 20 sr.	63	3	4 = value of 20 sr.
5 sr. = ½ of 10 sr.	31	9	8 = value of 10 sr.
2 sr. 8 ch. = 1 of 5 sr.	15	12	10=value of 5 sr.
	7	14	5 = value of 2 sr. 8 ch.
	Rs.46260	9	7 = value of 365mds, 37sr, 8ch.

Ex. 5. Find the rent of 71 bighas 6 kat. 14 ch. at Rs.8. 12a. per bigha.

Examples CXX.

Find by Practice the value, rent, &c. (as the case may be) of :-

- 1. 15 mds. 25 sr. 11 ch. at Rs. 12. 10a. 8p. per maund.
- 2. 8 mds. 11sr. 7 ch. at Rs.6. 10a. 8p. per maund.
- 3. 18 mds. 5 sr. 6 ch. at Rs.27. 144. 8p. per maund.
- 4. 777 mds. 20 sr. 12 ch. at Rs.40, 10a, 8p. per maund.
- 5. 373 mds. 39 sr. 7 ch. at Rs. 25. 2a. 4p. per maund.
 - 3 cwt. 2 qrs. 17 lbs. at £1. 5s. 8d per quarter.
 - 7. 57 cwt. 3 qrs. 14 lbs. at £5. 9s. 6d. per cwt.
- 8. 45 oz. 6 dwts. 7 grs. at 5s. 10d. per oz.
- 9. 37 cwt. 3 qrs. 2 lbs. at £3. 14s. 71d. per cwt.

- 72 cwt. 3 grs. 17 lbs. at 6s. thd. per quarter.
- 72 cwt. 3 qrs. 17 lbs. at dx. 13d. per quarter.
 11. 15 tons 11 cwt. 3 qrs. 18 lbs. at £3. 7s. 6d. per cwt.
- 12. 6 tons 12 cwt. 3 qrs. 10 lbs. at £3. 75. 66. per cwt.
- 13. 5 ac. 2 ro. 4 po. 41 vds. at Rs. 10 per rood.
- 14. 16 yds. 2 ft. 10 in. at 2s. 6½d. per yard.
- 15. 196 miles 3 fur. 137½ yds. at Rs.363. 4a. 8p. per mile.
- 16. 7 mds. 2 sr. 14 ch. at 3a. 6p. per seer.
- 17. 38 mds. 25 sr. 14 cn. at 3a. op. per seer.
- 18. 53 big. 12 kat. 2 ch. at Rs 19. 12a. per bigha.
- 19. 155 big. 1 kat. 4 ch. at Rs. 89. 8a. 4p. per bigha.
- 20. 44 ac. 2 ro. 25 po. at £55. 16s. 71d. per acre.
- 21. 35 qrs. 7 bus. 3½ pks. at 58s. 6st per quarter.
- 22. o cub. vds. 21 ft. 432 in. at £4. 14s. 6d. per cub. yard.
- 23. 5 lbs. 10 oz. 12 dwts. 63 grs. at £3. 17s. 11d. per oz.
- 24. 17 tons 12 cwt. 3 qrs. 18lbs. at £6. 15s. 9d. per cwt.
- 25. 6231 cwt. 2 qrs. 11 lbs. 15 oz. at £3. 14s. 8d. per cwt.
- 26. 191 ac. 3 ro. 37 po. at £42. 35. 4d. per acre.
- 27. 18 gals. 3 qts. 1½ pts. at 17s. 10½d. per gallon.
 28. 8 kan. 4 mds. 32 palm. at Rs. 3. 7a. 5d. per md.
- 29. 45 kan. 14 mds. 28 sr. at Rs. 32, 12a, 7h, per hadi.
- 30. 5 ac. 2 ro. 7 po. 88 sq. vds. at £161, 6s. 8d. per acre.
- 31. 7 mo. 2 wks. 5 days at Rs.24. 2a. 8th. per month.
- 32. 9 mo. 1 wk, 6 days at A's. 11. 6a. per week.
- 48 sq. yds. 8 ft. 114 in. at 131. 7\(\frac{3}{4}\)d. per sq. yd.
 28 yds. 2 qrs. 1\(\frac{3}{4}\) nl, at \(\frac{1}{4}\)1. 115. 1\(\frac{1}{4}\)d. per yard.
- 35. 7 mds. 7 vis. 39 palm. at Rs.2. 15a. 6p. per md.
- 398. The method of Practice may conveniently be applied to such examples as the following:-

Ex. 1. Find the dividend on Rs.57201. 12a. at 5a. 4\frac{1}{2}p. in the Runee.

	Ats.	a.	p.
4a. = 1 of Re.1.	57201	12	 amount of debts in full.
$1a = \frac{1}{4}$ of $4a$.	14300	7	o =amt. at $4a$, in the Re ,
36 = 1 of 1a.	3575	- 1	9 = amt. at ta
11p,=1 of 3p.	893	12	
	446	14	24=amt. at 110
	Rs.19216	3	41 = amt at 5a. 41p. in the Re

Ex. 2. Find the rent for 3 mo. 3 wks. 4 days from January 1, at Rs. 106. 12a. per month.

The month of April for which rent is due for 3 wks. 4 days or 25 days, contains 30 days.

15 days =
$$\frac{1}{2}$$
 of 30 days.
10 days = $\frac{1}{2}$ of 30 days.
10 days = $\frac{1}{2}$ of 30 days.
330 4 0 = rent of 3 months.
53 6 0 = rent of 15 days.
35 9 4 = rent of 10 days.
87.60 3 4 = rent of 3 mo 25 days, or

3 mo. 3 wks. 4 days.

Ex. 3. Find the value of 35 chests of tea, each containing 1 md-

Ex. 3. Find the value of 35 chests of tea, each containing 1 me 17 sr. 9 ch. at Rs.80. 12a, per maund.

Ex. 4. Find to the nearest pie the rent of 275'365 bighas as Nr. 3, 7a. 9p. per bigha.

4a. =‡ of 1 Re.	275'365	=rent at Re. 1 per bight
2a. = } of 4a.	826.095 68.841.25	= rent at Rs.3= = rent at 4a
$1a = \frac{1}{4}$ of $2a$.	34'420 625	=rent at 2a
6p. == } of 1a. 3p. == } of 6p.	8.605 1562	5 = rent at 6β
		25 = rent at 3/

Rs.959 474 921875 = rent at Rs.3. 7a. 9p. per bigha, and Rs.959 475 = Rs.959. 7a. 7p. the required rent.

Examples CXXI.

- 1. A bankrupt pays 10a. 6p. in the rupee; find the dividend on a debt of Rs. 3471.
 - 2. Find the price of 5222 yds. at Rs.29. 13a. for a dozen yards.
- How much income tax must be paid on an income of £756.
 6d. at 15. 2d. in the pound?
 - 4. Find the price of 256479 articles at £4. 12s. 64d. per 100.
 - 5. Find the price of 265 sheep at £63. 3s. 11d. per score.

6. How much will the carriage of 5 packages, each containing 4 cwt 3 qrs. 21lbs., come to, at Rs.6. 4a. per ton?

7. What is the dividend on Rs.57348. 5a. 4p. at 7a. 6p. in

the rupee?

8. What is the dividend on £1710. 14s. 6d. at 13s. 4\frac{1}{2}d. per £?

9. Find the price of 111 things at £11. 11s. 11d. per every 11.

Find the weight of 2697 packages, each weighing 19 lbs.
 oz. 18 dwts. 22 grs.

11 What distance will a train travel in 3 hours 39 min. 22 sec. at a speed of 40 miles 7 fur. 52 vds. per hour?

12. Find the rent for 11 mo. 2 wks. 6 days from March 1, 1889 at Rs. 38. 4a. 6p. per month.

13. Find the produce of 14 bighas 18 k. 2 ch. at 12 mds. 8 sr. per bigha.

per bigha.

14. Find the rent of 375'3675 bighas at Rs.29. 15a. per bigha.

Find the value of 143'7526 gallons of spirit at Rs.11. 14a.
 rgallon.
 16. A bankrupt owes Rs.7953'75 and pays 12a. 3b. in the

rupee; what is the value of his assets?

17. A bankrupt's debts amount to Rs.35483, 5a. 4p.; find what

his creditors will lose, if he pay 10a. 31p. in the rupee.

18. When exchange is at 25.11d, per rupee, what is the value

of Rs. 4032. 8a. 8p. in English money?

19. Find the rent for 7 mo. 3 wks. 4 days from Feb. 1, at

Rs.60 per month.
20. If 1 lb. Avoir. is 1 lb. 2 oz. 11 dwts. 16 grs. Troy, what is the weight (Troy) of 1 cwt. 2 grs. 25 lbs. 10 oz. 6 drs.?

III. INVOICES.

389. Every tradesman sells his goods at two prices, cash and credit. When payment is made at the time of purchase, it is called *cash*, but otherwise *credit*. Both these sales are entered in a book called the **Day-Book**, in the order in which they occur in the course of the day.

The entries in the Dsy-Book are posted at short intervals in the Ledger, the index of which contains a list of customers' names in alphabetical order. For facility of reference, opposite each name is the page of the Ledger in which is collected all the dealings which have taken place with that particular customer.

400. When a buyer has completed his purchases he is presented with a Bill containing in detail a written list of the good shought with a statement of the cost of them attached. An Invotee is a copy of the Bill which is sent home with the goods or forwarded to a customer living at a distance. Each separate entry in an Invotee or a Bill is called an Item.

401. An Account is a statement sent by the seller to the buyer at the end of the term of a credit shewing the totals and dates of each Armsics and the sum total of the whole. In such a case the account is said to be rendered (i.e.) sent to the buyer. If the details of the goods are also given, it is called a Detailed Account or Bill of Parcels.

Make out invoices for the following :-

to sr. of sugar at 3a. 9b. per sr.; 6 sr. of ten at 15a. 3b. per sr.;
 sr. of coffee at 14a. 3b. per sr.; 12 sr. of wheat at 1a. 2b. per sr.;
 10 sr. of rice at 1a. 3b. per sr.; and 9 sr. of cream at 11a. per sr

4½ yds. of long cloth at 2a. 9β, per yd.: 7½ yds. of cambric at 4a. 6β, per yd.; 6 pairs of socks at 1a. 3β per pair; 3 pairs of lose at 4a. 6β, per pair; 1 doz. pairs of socks at 2a. 9½β, per pair; and ε½ yds. of flannel at 8a. 11β, per yd.

3. 5 lbs. of black tea at Re.1. 5a. 4\phi. per lb.; 2\frac{1}{4} lbs. green tea at Re.2. 4a. per lb.; 15\frac{1}{4} lbs. of lump sugar at 3a. 8\phi. per lb.; 17\lbs. of moist sugar at 2a. 8\phi. per lb.; 7\frac{1}{4} lbs. of raisins at 7a. 4\phi. per lb.;

and 4 lbs. of currants at 4a. 4p. per lb.

15 yds. of fahnnel at 2s. 3d. per yd.; 29 yds. of calico at 8 ld.

per yd.; 25 yds of frish linen at 2s. 4d. per yd.; 17 yds. of towelling
at 1s. 2d. per yd.; 12\frac{1}{2} yds of brown holland at 11\frac{1}{2}d. per yd.; and
\[
\frac{1}{2} \frac{1}{2

5. 39½ yds. of Brussels carpet at R.s.2. 10a. 8p. per yd.; 62¾ yds. of Kidderminster carpet at Re.1. 12a. per yd.; 27 yds. of cocoa-nut matting at 9a. 4p. per yd.; 34½ yds. of drugget at Re.1. 2a. per yd.; and 43½ yds. of India matting at 8a. 8p. per yd.

8. 17 $\frac{6}{2}$ yds. of calico at 6a. 6 β , per yd.; 35 $\frac{6}{4}$, yds. of fiannel at 14a. 2 β , per yd.; 96 $\frac{6}{4}$, yds. of sheeting at Re.1. 0a. 4 β , per yd. τ ; 104 $\frac{6}{4}$ yds. of holland at 8a. 6 β . per yd.; and 12 $\frac{6}{4}$ yds. of ribbon at 5a. 7 β , per yd.

7. 17½ mds. of coal at Rs.8. 14a. per md.; carriage of ditto at Rs.1.2a. per md.; 2 mds. of coke at Rs.14.9a. 4b. per md.; 62 mds. of gram at Rs.2. 2a. per md.; 23 st. of seed at 9a. per seer; and 136 mds. of grain at Rs.3, 11a. per md.

15a. 42, per yd. ; 43,75 yds. of cloth at Re.5. 4a. per yd. ; 13 yds. of flannel at 15a. 42, per yd. ; 43,75 yds. of calico at 6a. per yd. ; 12,75 yds. of drugget at Re.1. 6a. per yd. ; 37 yds. of Brussels carpet at Re.1. 13a. 42, per yd. ; and 25,5 yds. of Kidderminster do. at Re.1. 4a. 85, per yd.

9. 3½ pharas of lime at Rs.2. 3a. 4p. per phara; 15 sr. of ghee at Rs.20. 8a. per md.; 2½ sr. of tea at Rs.1. oa. 8p. per seer; 20 sr. of flour at Rs.2. 3a. per md.; 3½ yds. of flannel at Rs.1. 2a. per yd.; and 20 yds. of calico at oa. 7b. per yd.

10. Calcottn, June 16th, 1885.—W. Godfrey, Esq. bought of Ghose and Go, 500 envelopes at 14a. 8b, per 100 : 3 hoxes of elastic bands at 11a. per box ‡ a gross of penholders at 6a. 4b, per dox. 2 reams of Poolscap at γa, per quire; 4 doxen quill pens at 3a. per dox: 13 note-books at 9a. each; and 250 official envelopes at 8a. per coa. Make out a copy of the bill and find its amount.

CHAPTER VIII.

Involution and Evolution.

402 A power of a number is the number which arises from successive multiplications by itself; the operation by which it is obtained is termed involution; and the degree or order of the power is denoted by the number of factors employed.

Thus, taking the number 2, we shall have the powers of it.

as follows :-

2=2, the first power of 2; $2\times 2=4$, the second power of 2:

 $2 \times 2 \times 2 = 8$, the third power of 2;

 $2 \times 2 \times 2 \times 2 = 16$, the fourth power of 2; $2 \times 2 \times 2 \times 2 \times 2 = 32$, the fifth power of 2;

 $2\times2\times2\times2\times2\times2=64$, the sixth power of 2;

and so on, as far as we please;

but instead of expressing these multiplications at length, which would soon become inconvenient, we denote the same operations by means of indices or small figures placed a little above the line to the right of the quantities whose powers are intended to be exhibited; thus, what is nut down above may be denoted by

21 = 2; 22 = 4; 23 = 8; 24 = 16; 25 = 32; 26 = 64; &c.;

where the index sometimes called the exponent is equal to the number of factors and is greater by one than the number of operations.

403. The second powers of the nine digits are expressed thus :-

 $1^2 = 1$; $2^2 = 4$; $3^2 = 9$; $4^2 = 16$; $5^2 = 25$; $6^2 = 36$; $7^2 = 40$; $8^2 = 64$; $9^2 = 81$;

and their third powers as follows:—

13=1; 23=8; 33=27; 43=64; 53=125; 63=216;

73 - 343; 83 = 512; 93 = 729.

The second and this d powers of numbers are styled their squares and cubes; and the operations by which all powers are obtained are merely those of multiplication.

404. A power of a fraction is equal to the fraction formed by raising both its numerator and denominator to the power, and the power of a quantity formed by factors is found by raising each factor to the power.

Thus, $\binom{9}{3}^2 = \frac{9}{3} \times \frac{9}{3} = \frac{4}{9}$; $\binom{2}{3}^3 = \frac{2}{3} \times \frac{2}{3} \times \frac{2}{3} = \frac{6}{87}$; and so on

Also $(2 \times 7)^2 = 2^2 \times 7^2 = 4 \times 49 = 196$; $(2.5)^3 = 2.5 \times 2.5 \times 2.5 = 15625$.

Note. A mixed quantity must be represented as a simple fraction or as a decimal, before the process can be applied.

405. A root of a number is such a number as being multiplied into itself one or more times produces it; and the operation by which this root is obtained is called evolution.

Thus, the second or square root of 16 is 4, because the square of 4 is 16, or 4^{2} =4×4=16. The third or cube root of 512 is 8, since the cube of 8 is 512, or 8^{3} =8×8×8=512; and similarly of vulcar fractions and decimals.

406. This operation is expressed by the sign $\sqrt{}$ which is called the radical sign, with a small figure placed on its left to particularize the root intended: thus,

2/ 16=4: 9512=8: and 5/32=2:

but the square root is denoted by the sign \sqrt{only} , without the small figure, as being of most frequent occurrence.

These operations are also indicated by means of the primitive fractions $\frac{1}{2},\frac{1}{2},\infty$, used as indices so that the indices $\frac{1}{2},\frac{1}{2},\infty$. &c., denote operations exactly the reverse of those expressed by the indices 2, &c., respectively: thus,

$$4^2 = 16$$
; $16^{\frac{1}{2}} = 4$ and $8^3 = 512$; $512^{\frac{1}{1}} = 8$.

I. EXTRACTION OF THE SQUARE ROOT.

407. A perfect square is a number whose square root can be expressed exactly either by an integer or by a fraction.

Thus, 16 is a perfect square, for its square root is 4.

408. In squaring a number we see that its square has the same units' figure as the square of its units' figure, and if a number ends with α, its square also ends with α. Now as the squares of the simple numbers t, a, 3, 4, 5, 6, 7, 8, α, and also to are respectively 1, 4, 9, 16, 25, 36, 49, 64, 81 and 1co, it follows that the square of every number (integral or declinar) must end with either 1, 4, 5, 5, 9 or an even number of os. Hence no number ending with (1) the digits a, 3, 7, 8, (i) am odd number of 0s, and a perfect square.

409. By the help of the Multiplication Tables we can immediately obtain the square root of a number not exceeding 400.

Thus, $9 \times 9 = 81$, and $15 \times 15 = 225$; $\therefore \sqrt{(81)} = 9$, and $\sqrt{(225)} = 15$. 410. When a number can be easily resolved into its prime factors, its square root can be determined by inspection. In a perfect square, every prime factor that occurs inust occur an even number

of times. Thus, Ex. 1. Find the square root of 1764. 1764=2×2×3×3×7×7=2²×3²×7²=(2×3×7)².

:. \sqrt{1764=2 \times 3 \times 7 = 42. Ans.

Ex. 2. Obtain the square root of 705600.

 $705600 = 10 \times 10 \times 2 \times 2 \times 6 \times 6 \times 7 \times 7 = (10^2 \times 2^2 \times 6^2 \times 7^2)$ $=(10 \times 2 \times 6 \times 7)^{2}$.

Ex. 3. What is the least number which, when multiplied into \$1425, will make the product a perfect square?

> 51425=11 × 11 × 425=11 × 11 × 25 × 17=112 × 52 × 17. the required number = 17. Ans.

> > (6) (21)4,

Examples CXXIII

1. Find the respective values of :-(2) 392 × 485.

- 313.
- (5) $(806^2 + 31^2) \times 50$.
- (8) (152-1'312)+15.

- (10) (7'032 × '10)2+(3'14 × '02)3.
- 2. Find (by inspection) which of the following are square numbers ;-
- (1) 27; 96; 524; 9450; 7805; 9604; 12321; 494208.
- (2) 4000; 75720; 388129; 582168; 12343225; 38812900.
 - Find the square roots of (using factors):—
- (1) 49; 196; 289; 361; 324; 256; 121; 400; 144-
- (2) 625; 529; 900; 1296; 17424; 63504; 99225.
- (3) 680625; 48024900; 12446784; 2480625; 57153600, 4. Find the least numbers which, when multiplied into the
- following numbers, will make the products perfect squares :-175 ; 693 ; 1456 ; 3465 ; 3456 ; 4536 ; 28413 ; 750750.
- 5. What must be the least number of soldiers in a regiment, to admit of its being drawn up 2, 3, 4, 5, or 6 deep, and also of its being formed into a solid square?
- 411. From the number of figures in any proposed quantity, to find the number of figures in its square root.
- Since, the square root of I is I:
- the square root of 10000 is 100; the square root of 1000000 is 1000 : &c. :
 - we see immediately that the square root of a number of fewer than 3 figures must consist of only I figure; that of a number of more than 2 figures and fewer than 5, of 2 figures; that of a number of

the square root of 100 is 10;

(3) 925².

(7) $506^2 + 506^3 - 307^3$.

(9) 5023+183-13762.

(11) 1'03(4'07 + 3'16)2.

(4) (31.5)3.

- 300

more than 4 figures and fewer than 7, of 3 figures, and so on: whence it follows, that if a dot or full point be placed over every alternate figure, beginning at the unit's place, the number of such points will be the same as the number of figures in the square root. This is called the Rule of vointing.

Thus, the square root of 10% consists of 2 figures in its integral part; the square root of 314256 consists of 3 figures in its integral part; and so on.

412. The extraction of the square root of a number depends on the principle illustrated by the following examples:—

Since $28^2 = (20 + 8)^2 = 20^2 + 2 \times 20 \times 8 + 8^2$;

.. $28^2 - 20^2 = 2 \times 20 \times 8 + 8^2$; .. $28^2 - 20^2 + (2 \times 20) = 8 + a$ proper fraction.

413. To extract the square root of a whole number.

RULE. Point the alternate figures of the number proposedbeginning at the place of units, so as to form as many periods of two figures each as possible, and remember that each period consists of the figure over which the dot is placed and the figure to its left. (The first period may consist of one figure only).

Find the greatest square number contained in the first period on the left hand, put down its root on the right as in division, and subtract it from that period. To the remainder bring down the next period for a dividend, double the root just found for a divisor (called the trial divisor), and find how often it is contained in this dividend exclusive of the figure on its right hand; annex this quotient to the figures in both the quotient and divisor. Multiply the divisor thus completed by the last figure of the quotient, and if the product be not greater than the dividend, subtract it from the dividend, but if the product be greater, use a lower number for the root figure until it becomes less; subtract the product as before. To this remainder bring down the period which comes next in order; take twice the number in the root, and see how often it is contained in this dividend with its last figure omitted; and proceed precisely as before. Repeat the process till every period in succession is disposed of, and the root will thus be obtained.

Note. If at any step the quotient figure is o, set down o in the root, annex it to the trial divisor, bring down the next period and proceed as before.

Ex. 1. Find the square root of 8649.

Place dots over 9 and 6, so that the number is divided into two periods, 86 and 49.

The number whose square is immediately

The number whose square is immediately below 86 is 9 (for 9²=81 which is next below 86). Hence 9 is put in the root and 81 subtracted from 86.

To the remainder 5 is brought down the next period 49; thus the new dividend is 549. Now 2x9 = 18, is the trial divinor, which goes into 54 (549 with 9 omitted) 3 times. Hence 3 is put after 9 in the root and also annexed to 18. Multiply 183 by 3 and the product is 549, which subtracted from the dividend leaves nothing. Therefore 7s is the root obtained.

Ex. 2. Extract the square roots of 804609; 12809241; and

(1) 804609 (897.	(2) 12809241 3579.	(3) 21224449 4607
169 1646	65[380 325	86 522
1787 12509	707 5592 4949	9207 64449
	7149 64341	(04443

414. When an integer (which is a perfect square) ends with an even number of ciphers, it would be sufficient to extract the square root of the significant figures and then to annex to the root one cipher for every two ciphers in the proposed number.

, Ex. Extract the square root of 841000000.

841cooooo (29000. 4 Here are 6 ciphers in the given number: therefore we add 3 ciphers

to 29, the square root of 841.

415. Again, since the square root of 'or is 'r;

441

the square root of 'cocot is 'cot; &c.;

we infer that the quantity proposed must first be made to have an even number of decimal places, and then the pointing must proceed from the place of units towards the right hand over every alternate figure as before; and the number of such points will be the same as the number of decimal places in the square root.

416. If there be no whole number or integral part in the proposed number, we must, in pointing, begin with the second figure from that which would be the units' place, if there were a whole number, and place does successively over every alternate figure to the right. If there he a whole number as well as a decennal fraction over the state of the state of

Ex. Extract the square roots of 93'7024, '02819041 and '00822649.

Examples CXXIV.

- 1. Find the square roots of :-
- (1) 676; 1444; 16129; 21025; 288369; 998001; 71289.
- (2) 2025; 692224; 54756; 822649; 97574884; 10004569.(3) 33016516; 45859984; 5774409; 62805625; 4020025.
- (4) 6512400000 : 5777216064 : 05481000000 : 3015380320.
- (4) 0512490000 ; 5777210004 ; 95481000000 ; 3915380320 (5) 8266628544 ; 0387036661561 ; 787026841863686886.
 - 2. Extract the square roots of :--
- (1) 22'09; 33'64; 1082'41; 22'8484; 187'4161; '128881.
- (2) '0054; '005329; '00053361; '00038025; 3659'0401.
- (3) 1164-1744; 136966-6081; 240168-6049; 236-144689.
- (4) 41605'800625; '00501361708761; '00000049112064.
- 3. A certain number of boys spent R5.90. 4a., each spending as many four-anna pieces as there were boys; what was the number of boys?
- 4. A square pavement contains 20736 square stones, all of the same size; what number composes one of its sides?
- 5. A society collected among themselves for certain purposes a fund of R₂.459. 6α.; each person paid twice as many pies as there were members in the whole society. Find the number of members.
- A general, trying to mass his army of 15410 men into a square found he had 34 men over; required the number of men in the front.
- 417. If the number is not a perfect square, we can find an approximation to its square root to any required number of decimal places by affixing ciphers to the right hand of the proposed number and bringing down periods of 2 ciphers each.
- Ex. Find the square roots of 11 and '4, each to 4 places of decimals.

418. When the proposed number is a recurring decimal, extend the recurring part by a repetition of its period and then proceed as in decimals.

16444

Thus, to extract the square root of 4'3157 to four places of decimals, first extend the recurring part 157 and put 4'3157157:57... for 4'3157, and then proceed as usual.

419. When the number of figures to be found in the decimal part of the root is large, we may obtain in the usual way one more than half the required number of figures in the root, and then the remaining figures by dividing the last remainder by the last divisor, as if Art. 489.

Ex. Extract the square root of 10 to 8 places of decimals.

49116 The first 5 figures are obtained in the usual way, and the last 4 by Contracted Division.

Examples CXXV.

- 1. Find the square roots of (each to 4 places of decimals) :-
- (1) 2; 3; 5; 6; 7; 8; 12; 13; 18; 20; 32; 38.
- (2) 44; 51; 72; 80; 95; 638; 796; 801; 1000.
- (3) 5713; 363; 35120; 8837; 822646; 72471438; 7432.

- 2. Extract the square roots of (each to 4 places of decimals):—
 (1) 11: 21: 31: 41: 51: 61: 71: 81: 91: 12: 16.
- (2) '05 : 5'1 : 4'0 : '16 : '016 : '01 : '51 : '051 : 4'03.
- (3) '002; '225; '021; '3; 4'5; 34'85; 321'73025; 18'7.
- (3) '002; '225; '021; '3; 4'5; 34'65; 321 73025; 16 7. (4) 3'14159; 175'250564: 12'56636; 23'41275; 7894'6193.
- (5) 2'361; 5'0132; 4'02981; 49'00521; '67; 57'57; '0198.
- Find to 10 decimal places the square roots of:--
- (1) '001728; 9'79; '0683; '3467; 44'284; 1'57; 75'347-
- (2) '85; '07; 3; 97'9; '0003532; 27'773; '0365.
- 420. The square root of a fraction may be obtained by finding
- the square roots of its numerator and denominator separately.

 (r) If the denominator of the given fraction, or of the fractional part
- of the mixed number, be a perfect square, we apply the Rule directly, whether the numerator be a perfect square or not.

Thus,
$$\sqrt{\frac{144}{169}} = \frac{\sqrt{144}}{\sqrt{169}} = \frac{12}{13}$$
, $\sqrt{\frac{817}{64}} = \sqrt{\frac{529}{64}} = \frac{\sqrt{529}}{\sqrt{64}} = \frac{23}{8} = 2\frac{3}{6}$,
 $\sqrt{\frac{29}{64}} = \sqrt{\frac{329}{\sqrt{64}}} = \frac{285164...}{8} = -673145...$
 $\sqrt{1278_2^2} = \sqrt{\frac{31957}{24}} = \frac{\sqrt{1957}}{\sqrt{127}} = \frac{7787652...}{25} = 357530...$

(a) But if the denominator of the given fraction or of the fractional part of the mixed number be not a perfect square, we reduce the fraction or the mixed number either (i) to an equivalent fraction whose denominator is a perfect square and extract the square root of both numerator and denominator, or (ii) to a decimal, and proceed in the usual way.
Thus, √5 - √(∑√2) = √(3√2) = √(3√2) = (50.1607...) = 84515...

$$\sqrt{7 \times 7} \quad \sqrt{49} \quad \sqrt{49} \quad 7$$

$$\cos \sqrt{(7) 1488}) = 84515...$$

$$\sqrt{25} = \sqrt{\frac{283}{11}} = \sqrt{\frac{383 \times 11}{121}} = \frac{\sqrt{3113}}{121} = \frac{55794265...}{111 \times 11} = \frac{11}{11} = \frac{11}{11}$$

421. If a recurring decimal is a perfect square, it would be convenient to reduce it to a vulgar fraction and proceed as in Art. 420 (1), above.

Thus,
$$\sqrt{(1.7)} = \sqrt{\frac{16}{0}} = \sqrt{\frac{16}{0}} = \frac{1.3}{3}$$
.

Examples CXXVI.

- 1. Find the square roots of :-
- (1) A. ; 188 ; A.L. ; A.L. ; 2004 ; 2005 ; 20048.
- (2) 4音音; 10音音; 345音音; 32音音; 32音; 41音音音; 564音音音.
- Find the square roots of (each to 4 places of decimals where the root does not come out exactly);—
- (1) $\frac{5}{8}$; $9\frac{1}{2}$; $6\frac{2}{5}$; $\frac{1^{\circ}28}{12^{\circ}5}$; $\frac{4^{\circ}41}{64}$; $76\frac{14}{17}$; $\frac{5^{\circ}04}{012}$; $\frac{00841}{1000}$.
- (2) \$; 21+ ; 44; }\$; }\$; }\$; 21+ ; 21+ ; 27+ ;
- (3) \$\frac{1}{2} \cdot \frac{1}{2} \cdot \frac{1
- 3. Find the square roots of :-
- (1) 'f; '027'; 18'7'; 3'36f; 28'4'; '00027'; 4738'027'. (2) '00134'; '071f; 53'7'; '004'; 5'4'; '017'; '040382716'.

II. EXTRACTION OF THE CURE ROOT.

- 422. A perfect cube is a number whose cube root can be expressed exactly either by an integer or by a fraction.
- 423. Given the number of figures in a number, to find the number of figures in its cube root.
 - Since, the cube root of 1 is 1; the cube root of 1000 is 10;
 - the cube root of 1000000 is 100; &c.;
 - - 424. To extract the cube root of a given number.
 - RULE. Place a point over the units' figure of the given number and thence over every third figure to its left, and also to its right if the number be a decimal, adding ciphers, if necessary, to get periods of three; and remember that each period consists of the figure over

which the dot is placed and the two figures to its left, if there are so

many (for the first period may contain 1, 2, 3 figures).

Find the number whose cube is either equal to, or next less than the first period on the left hand and place it as the first figure of the root. Subtract its cube from the first period, and to the remainder bring down the next period.

Multiply the square of the root already obtained by 300 for a trial or partial divisor, and then find how often this divisor is contained in the dividend; this quotient gives the next figure of the root. Then, multiply this quotient figure by the product of the previous figure of the root by 30, and place the result below the partial divisor. Below these place the square of this last quotient figure and add the three together for a Complete divisor. Multiply this complete divisor by the last figure of the root and subtract. To the remainder bring down the next period to form the next dividend.

Multiply the square of the root already obtained by 300, and find how often this trial divisor is contained in the dividend. Put this quotient as the third figure of the root. Then, multiply the figures of the root already obtained by 30 and the product by the last quotient figure, and place the product below the partial divisor-Then place the square of the last quotient figure, and add the three together, for a complete divisor. Multiply this divisor by the last figure and subtract, and bring down the next period to form the next dividend. Proceed in this way till all the periods have been brought down.

Note. If at any step, the dividend is less than the divisor, put a cipher to the root, two ciphers, to the trial divisor, and bring down the next period.

Ex. 1. Find the cube root of 21952.

21951/28. Here, first divide into periods beginning with 2 the first period on the left contains only 2 figures. The 22 X 300= 1200 13952 trial divisor 1200 goes into the 2 × 30 × 8 == 480 dividend 43052, 8 times. 82 - 64 1744 13952

Ex. 2. Extract the cube root of 12812'904.

161476

12812 904(23'4 First divide into periods of three beginning with 2, both left and 22 × 300=1200 4812 right. The first period is 12 and the greatest cube root in 12 is 2. 2 × 30 × 3 = 180 The trial divisor 1200 goes into 1389 4167

2 32 × 300 = 158700 645904 the dividend 4812, 3 times. 23 X 30 X 4 = 2760 16

The trial divisor 158700 goes into 645904, 4 times.

We may shorten the process a little as below :--

18812 904(27.4 In column II, instead of writing for 1893 and 1894 affect a 1895 affect

425. If the number is not a perfect cube, we may obtain its cube root to any required number of decimal places by annexing ciphers and bringing down periods of three ciphers each.

Ex. Extract the cube root of 3 to 3 decimal places.

126 801 216 12 1116) 84000 Since the root is to be extracted 1089 to 3 places of decimals, there must 11916 be 3 periods of 3 figures in the deci-361 71496 mal part: therefore we must affix 13068 12504000 8 ciphers to 3. 17901 1324701 11922300

426. When one more than a half of the figures required in the root have been obtained by the ordinary method, the rest can be found by Contracted Division, as in Art. 389.

497. In extracting the cube roots of vulgar fractions, if the denominator of the fraction be a perfect cube, find the cube roots of both the numerator and the denominator separately; but if the deannimator of the fraction be not a perfect cube, where reduce the fraction number of the fraction be not a perfect cube, where reduce the fraction that the cube root of numerator and denominator, or reduce the fraction to a decimal and proceed in the ordinary way.

$$\begin{array}{lll} \text{Thus, } \sqrt[3]{\frac{27}{64}} & \sqrt[827]{\frac{8}{64}} & \sqrt[8]{1} \sqrt[8]{\frac{9}{64}} & \sqrt[8]{\frac{9}{64}} & \sqrt[8]{\frac{9}{64}} = \frac{3'072317...}{8'0.6} = .768079... \\ \sqrt[8]{8} \sqrt[8]{\frac{9}{7}} & \sqrt[6]{7} & \sqrt[3]{\frac{3}{343}} & \frac{82996}{3'343} & \frac{14'4048...}{7} = 2'0578... \\ or & \sqrt[8]{8} \sqrt[3]{14283} = 2'0578... \end{array}$$

Examples CXXVII.

Find the cube roots of :—

581601

(1) 1331; 15625; 46656; 2197; 185193; 117649.

- (2) 704969; 912673; 33076161; 15069223; 105823817.
 - (3) 873722816; 198767717056; 702121283072.
 - (4) 17.576; 132.651; 493.039; 64481.201; 18.609625.
 - (c) 17.576; 132.051; 493.039; 04481.201; 10.000267.30809.
- (6) 524; rdillin; 494; 7558171; 4652; 57172.
- (0) 315; 731808; 4927; 7530212; 4032; 57313; (7) 1034; 5'912; 5; '078759; 3'467 (each to 4 decimal places).
- (8) \$\frac{3}{7}; \frac{5}{7}; 7\frac{5}{8}. 18\frac{7}{72}; 18\frac{5}{72}\text{is} (each to 4 decimal places).
- (9) 902; '903; '013; '024; 2'187 (each to 8 places of decimals).
 - 2. Find the cube roots of :-
- (1) $\frac{5.12}{33.75}$; $\frac{5030.012}{65536}$; $\frac{5.12}{.03375}$; $\frac{1257.72}{16384}$
- (2) 3845 296; 037; 1587 962; 8; 27; 335142; 81812703 (the
 - A cubical block of stone contains 50653 solid feet; find the length of its side.
 - 4. Extract the cube root of 233'744896, and derive the cube root of this number multiplied by 'co8.

III. EXTRACTION OF SOME OTHER ROOTS.

428. The directions already employed may by a little management be rendered available for the discovery of some other roots, as will be evinced in the following notes.

- (1) The Fourth root of a number is found by extracting its square root, and then the square root of its square root.
- (2) The Sixth root of a number is found by extracting its cube root, and then the square toot of its cube root; or by extracting its square poot-and then the cube root of its square root.
- (3) The Eighth took of a number is found by extracting its square root, they the square root of its square root, and lastly the square root of that square root.
- (4) The Ninch toot of a number is found by extracting its cube

root, and then the cube root of its cube root.

Ex. Find the fourth root of 1670616 and the sixth root of

- 308915776.

 (1) Here the square roof is found to be 1296; and the square root of 1296 is 36. Therefore the fourth root of 1679516 is 36.
- (2) Here the square root is found to be 17:576; and the cube root of 17:576 is 2.6. Therefore the sixth root required is 2.6.

Examples CXXVIII.

. Find the fourth roots of 104976 ; $1500625 \cdot ; \, 4323738 \cdot 0096.$

2. Find the sixth roots of 2985984; 24'137569; 17596'287801.

3. Find the eighth roots of 214358881 ; 21035 8 ; 903532 ; $57 \#_{\nu}^2$ last three to 5 decimal places).

4. Find the ninth roots of 262144; 134217728; 5159780352.

5. Find the fourth root of 21 \(\frac{20}{2404}\); and the sixth roots of 66121 and 260184053769595201.

Miscerlaneous Examples V.

1. What are the prime factors in 45090045, and what is the allest whole number by which it must be multiplied in order to ike it a perfect square?

2. What is the difference between the values of

$$\frac{2\frac{1}{4} \text{ of } 5\frac{1}{8}}{27\frac{1}{2}}$$
 of Rs.11. 4a and $\frac{51^{\frac{1}{2}}}{2\frac{1}{2}+3\frac{3}{4}}$ of Rs.6. 4a.?

 A chain, 11 yds. long, is divided into 50 equal parts, called aks; find how many square links there are in an acre.

4. Bring $\left\{ \left(\frac{5\frac{1}{4} - \frac{1}{3}}{2} \times 4\frac{1}{4^{\frac{3}{4}}} + 2\frac{5}{4^{\frac{3}{4}}} \right) + 21\frac{3}{6} \times 3\frac{1}{6}\sqrt{\frac{5}{6}} \right\}$ cwt. to the fraction if $4\frac{1}{3}$ ton.

5. A merchant bought 264 gallons of spirit at Rx.12, 8a, $4\frac{1}{2}a$.

per gal.; 378 gallons at Rs.9. ioa. 76. per gal.; and 420 gallons at Rs.12. 15a. 64b. per gal. If he sell the whole quantity at Rs.12. 4a. per gal., what profit will he make by the transaction?

6. Two numbers have for their G. C. at. 179 and for their

6. Two numbers have for their G. C. M. 179 and for their G. C. M. 56385. What must the greater number be, if the less

= 105 times
$$\frac{29}{49}$$
 of $\frac{363.37}{84}$?

7. Which is the greater

$$\frac{3}{5} \text{ of } \frac{13}{16} - \frac{18}{63} \text{ of } \frac{19}{20} + \frac{3}{7} \text{ of } \frac{6\frac{4}{13}}{33} \text{ or } \frac{1}{3} \text{ of } \frac{13}{13} + \frac{6\frac{1}{13}}{13} \text{ of } \frac{19}{20} - \frac{7}{3} \text{ of } \frac{6\frac{4}{13}}{33} \text{ of } \frac{1}{33} \text{ of } \frac{1}{13} + \frac{6\frac{1}{13}}{13} \text{ of } \frac{1}{13} - \frac{7}{3} \text{ of } \frac{6\frac{4}{13}}{33} \text{ of } \frac{1}{33} + \frac{6\frac{1}{13}}{13} \text{ of } \frac{1}{13} + \frac{6\frac{1}{13}}{13} \text{ of } \frac{1}{13} - \frac{7}{3} \text{ of } \frac{6\frac{4}{13}}{33} \text{ of } \frac{1}{13} + \frac{6\frac{1}{13}}{13} \text{ of } \frac{6\frac{4}{13}}{13} \text{ of } \frac{6\frac{4}{13}$$

8. Express \$5.6. 5a. 10\(\frac{1}{2}\)p. as the fraction of \$\(R\$\$.9. 8a. 10\(\phi\).

9. Find by Practice the value of 29764 articles at Re.1. 11a 930. each.

10. Simplify
$$\frac{3}{6}(6\frac{2}{3}+2\frac{3}{4})\mathcal{L} + \frac{2\frac{1}{3}-\frac{3}{6}}{\frac{1}{3}}\frac{\text{of }}{1\frac{1}{6}} \times 95 \text{ of } 5s + \frac{16\cdot 8}{1024}d$$
.

11. Simplify (25.4)2+(24.6)2-12.7 × 98.4+(-6)2.
